What is the size of 80 grams of flour of all purposes? 80 Grams Of All Purpose Flour = 8.83Poonstable 26.48Teaspoons 0.55U.S. Cups 0.46 Imperial Cups 0.52 CupsMetrics 130.53MiliterNotes All results are approximately weights of ingredients vary Flour is measured using the method of diving and scanning Most of our data comes from here Need Imperial & Metric conversions for recipes? These Us Cooking Converses for Ounces charts will help you convert from cups to grams and ounces. From my research, I found that the United States is one of the three nations (Liberia and Burma being the others) that did not the metric system as its official system of weights and measures. In the Us Habitual System (also known as inch-pound system), there are more than 300 different units to measure various physical quantities. Many of these units use the same name, but have very different meanings. All this can make it very complicated to convert measures. To try to make things a little easier for you, I'm adding conversion charts to commonly used ingredients. Check from time to time, as I'll update when I have new items to add. Note: All conversions are approximate weights.
