This app has a lot to offer beginners, intermediates and advanced players. GuitarTuna was developed by guitar enthusiasts and audio engineers using a high-precision audio recognition algorithm. This technology also feeds the popular developer program, Yousician. GuitarTuna is a popular free tuner app for your mobile phone or tablet. Built initially by guitarists, it offers cutting-edge features as well as educational resources for beginners. The tuner interface is simple and intuitive. There are plenty of customization options and a metronome. You can even customize the tool to look like your tool using headgear visuals. The app has a background noise, so you can customize the tool even in a loud environment. Beginners can take advantage of the main guitar lessons in this app. There are six Ultimate Chord Learning games available to choose from. The GuitarTuna Library includes many diagrams for visual learners, and you can also hear how each chord should sound. This app is not only for guitarists, as it also works with other string instruments such as cello, violin, banjo and ukulele. There are over 100 tunings available, like Drop D, Standard, and half a step down. Where can you run this program? This app requires Windows 10. Is there a better alternative? No. While Fender has a free app for guitar tuners, it doesn't have many features. GuitarTuna is an excellent tuner and metronome app. You'll find that it's a useful tool, whether you're playing a show regularly or just jamming in your room. Should you download it? Yes. GuitarTuna is a handy tuner app that any guitarist should download. Image: ShutterstockIf you use your time of physical distancing to learn guitar, Fender offers free guitar, bass and ukulele lessons for the first 500,000 people to subscribe to Fender Play. It's a free trial, but you don't have to process any payment details to access it, so you don't run the risk of getting paid if you forget about it. Once you've registered, you'll need to tell the site which tool you'd like to know. As you learn, the site will track your progress. The recommendation is to practice 3 days a week for at least 7 minutes, but let's be honest, we can all probably do a little better than now. Lessons are broken down in chronological order, so it's easy to know exactly what you should do. Each lesson has a video associated with it, and most videos are just a few minutes long, so you can use them to break your day like short breaks, or watch a bunch of back-to-back to get full to the lesson. If already learning, you can also take lessons wherever you are on this journey. For example, if you already know some chords you can go straight into something a little more advanced. If you stick through it through the 90-day trial, then you can just ready to finally start this group as soon as you're done. Edited to include specific details for those who have ad blockers: Fender notes that you may need to temporarily disable your adblockers to see the code. If you do and still don't see it, try Incognito or private viewing mode. When you go to the Fender website, the pop-up will offer three months of free lessons. Click the Claim Offer button and then get the code on the next page. When you press Get Code at the top of the page, you'll have a special, unique code that you need to enter when you create an account. The famous guitar maker has launched a subscription video service that features bite-sized, easy-to-follow lessons for those of us with short attention spans. A large scale at the first position. The root of the scale is marked in red. In your evolution as a lead guitarist, it becomes more and more important to learn solo in more than one position. If, for example, you are solo in key C major, and you only feel comfortable playing a few frets surrounding the eighth fret, then you limit yourself unnecessarily. Below are diagrams and explanations of how to play scale in each position around the neck of the guitar. The first position of a large scale, seen above, is the standard way of playing on a large scale, which most guitarists know. If it looks unfamiliar to you, play through it. It's doing re mi fa salt la tee do scale you probably learned at school. Start the scale with your second finger and don't adjust your hand position while playing the scale. Make sure to play the scale back and forth, slowly and evenly until you remember it. A large scale in the second position. The pattern starts two frets up from the root on the sixth line. The root of the scale is marked in red. The second large position begins with a pattern on the second note of the scale. So if you play G major scale in second position, the bottom note in the pattern will be A - two frets up from the root of the scale. It's actually much easier to hear than to explain. Now try to play the third fret on the sixth string of the guitar (note G) with the first finger. Then slide your finger to the fifth fret and play the pattern shown here. Play the scale back and forth, staying in position throughout, using the fourth (pink) finger to stretch. When you return to the fifth fret on the sixth line, slide your finger down again to play the note on the third fret. Did you hear what happened? You've just played the G major scale that you usually play with using the template outlined on the previous page. This time, however, you played a scale of two frets up using a different scale pattern. This is a concept that we will apply in the next steps to the other positions of a large The goal, when it is completed, is to be play on one large scale all over the fretboard. A large scale in the third position. The pattern starts four frets up from the root on the sixth line. The root of the scale is marked in red. This pattern begins on the third note of the main scale. So if you were playing G major scale - traditionally played starting with the third fret of the sixth row - you'd start this pattern on the seventh worry on Note B. Stay in position while playing this scale model. Large scale in fourth position. The pattern starts five frets up from the root on the sixth line. The root of the scale is marked in red. This scale model is actually no different from the third position pattern we just reviewed - your hand position remains identical. To play the scale in the fourth position properly, you start the pattern above using the second finger. So, on the sixth line, you would use the second finger and then the fourth finger to play the second note. Then, on the fifth line, you will start with the first finger. When you play the pattern this way, your hand position should never change. A large scale in the fifth position. The pattern starts seven frets up from the root on the sixth line. The root of the scale is marked in red. Start this pattern with the second (middle) finger. In the fifth position you will need to move the hand position up the fret on the second line. Stay in this new position for notes on the second and first lines. When you go down the scale, stay in this new position for the first and second lines. When playing the first note on the third line, use the fourth (pink) finger, which, of course, should move the hand back to the original position of the hand. A large scale on the sixth position. The pattern starts nine frets up from the root on the sixth line. The root of the scale is marked in red. The template for the sixth position of a large scale begins with the first finger. Play the scale in the same position, stretching with the fourth (pink) finger when needed. A large scale on the seventh position. The pattern starts eleven frets up from the root on the sixth line. The root of the scale is marked in red. The seventh position of the main scale is actually the same hand position as the root position - the difference is that you start playing the pattern with the first finger rather than the second. Play the template for the seventh position of a large scale back and forth, keeping your hand in the same position throughout.
