To run windows of apps/games right now the best choice is 'ExaGear' (which uses WINE to run windows performed). The emulator is a job, but in the SDL interface when I click on the three-point menu it would be a crash! Please fix it! Android 5.1 arm64. My LG G4 device. Honestly well, tried for a few days to install Win95/Win98 on my Samsung Galaxy Tab 3. Had a hard time (impossible) until I find on YouTube that a hacker keyboard was absolutely necessary. Then it turned out to be almost normal, as long as I didn't touch the option button in the top right. In fact sometimes it doesn't crash and you can install Win 98 (I did, it took 4 hours easily) and you can get a keyboard. But if you try to disguise the keyboard, the odds are 99% crash. Don't even try to use the save state, it automatically fails. It's very bad, but hey, better than nothing. I'll try to install old games because DosBox doesn't work. A few fixes would be welcome, especially when we want to disguise/display the keyboard or use a state stave. During if I were to open the tab with keyboard and mouse settings (options I think) the power app is closing. It doesn't do this on my old phone, but it doesn't have much storage space. My current HTC phone desire is 816. Good work with this but there are only a few Oses that work. Can't work properly with puppy linuxes (any) and can't run any versi'n OS/2 with PM. It would be nice if the developer fix the problem. Name: Contra. Description: Play Contra online In this Contra game is your start with the control setting for the contra men.
