This app is rated by 3.38 21 users who use this app. To learn more about the company/developer, visit the website of Mike Reed, who developed it. fm.a2d.s2.apk apps can be downloaded and installed on Android 4.4.x and above Android devices. The latest version of 2015-04-14.0 is available for download. Download the app using your favorite browser and click Set to install the app. Please note that we provide both basic and clean APK files and faster download speeds than the APK Mirror. This APK app has been downloaded 74,088 times for storage. You can also download fm.a2d.s2 APK and run it with popular Android emulators. Spirit2 is a real, customized, over-the-air FM radio app for Root and AOSP ROM'd Android devices. If you don't understand the root, please take a look at Spirit1. Spirit does not require Internet access. I cancel any on-demand order for 30 days, or much longer when necessary. Please email email protected for refunds, error messages, or for older versions. For more information and ask any question here: ! IMPOSSIBLE Devices: ALL Nexus and many Samsung - other devices have FM intentionally and incorrigibly disabled in hardware. No app can ever fix this. Email for a refund and google explanation of false verification compatibility. NO FM for GALAXY S4/S5, Note3/Note4, Tab, All US Galaxy S/Note class phones, Motorola flagships, and many other Android Lollipop 5 require a huge Spirit2 rearchitcture, but not KitKat beta users get the old design. Spirit2 is the successor to Spirit1. Unlocked and is the best Darn FM app in existence! I'm still enjoying Spirit 1, is there any reason to pay again for Spirit 2? : Spirit2 supports only the most popular, latest, higher end devices that have digital audio support in Spirit1. Unlocked. See the list below. Spirit2's user interface and underlying architecture have been greatly improved. Spirit1 Unlocked is still more mature/bug free and has more features. Your support will help Spirit2 match and surpass Spirit1's feature set. AOSP !: If you don't know what AOSP means, Spirit2 isn't for you. Spirit1. Unlocked runs on numerous stock phones: Best Darn FM app: Yes, it has some bugs and may miss some polish stock FM applications, but it's the most functional and has more tweaks. The only FM app supporting it all: Effects, Recording, BT A2DP and Visualizer. Spirit2 also supports several remote displays and controls: home and lock screen widget, lock screen, notification shadow, BT AVRCP and future android remotes. AVRCP puts RDS and station information on the BT compatible headset display, as well as overseas pause/playback and pre-installed selection. It was pretty cool when I first saw it working. Spirit2 beta group. Latest Releases for Play Customers: information about the main XDA, MUCH INFORMATION updated March 25: Spirit2 Official Support: Only These Phones Running Compatible AOSP - ROMs: Samsung GS3 GT-I9300 Samsung GS2 GT-I9100 Samsung GS1 GT-I9000 Samsung Note1 GT-N7100 Samsung Note1 GT-N7000 HTC One (GPE requires BT Off) HTC OneXL, One, One, Evo 4G LTE (2013 CM11 only 2014 core broke FM) LG G2 D802 International and Sprint LS980 only. (Some stocks, CM11 and Mahdi ROMs only as of March 2014) Motorola Moto G Official support means that I own the phone and I can properly support it. Compatible AOSP ROMs includes as many AOSP ROMs as I can reasonably support, which have THE FM AND audio cores required to enable FM. The CM11 is the most popular and most supported, with the exception of the incompatible 2014 cores for HTC OneXL LTE, OneS and Evo 4G LTE. The LG G2 is only supported on CM11, AOKP and Mahdi ROM since April 2014. Unofficial support: The only other devices with full operation are devices with WCN3660 chips or newer compatible FMBT/WiFi chips, as well as Qualcomm WDC9310 chips or newer compatible audio chips. This includes most late 2012 Sony devices, starting with the Xperia T. They may or may not work well and are not officially supported. With sufficient demand I will consider the possibility of buying a device I and official support some Sony. Stock ROMs: Spirit2 also works quite well on many stock or stock-derived ROM when rooted. But there are often problems such as FM over BT issues on Samsung stock ROM. Most of my clients are on AOSP/CM ROMs. Thank you! :) Mike. But there are often problems such as FM over BTissues on Samsung stock ROM. Most of my clients are on AOSP/CMROMs.Thanks ! :)Mke. App Info Spirit2: Real FM Radio 4 AOSP Package Title fm.a2d.s2 Updated December 22, 2015 File Size Indefinite requires Android Android Options with Device Version Developer Mike Reed Sets 10,000 - 50,000 Price \$6.99 Category Music and Audio Developer Google Play Link Google Play Link SpiritTransmit Root Xper just 2015_03_31_kitkat APK Spirit FM Transmission is a real FM transmitter. Spirit Transmit only operated on ROOTED from late 2012 to early 2014sony devices that use Qualcomm FM chips where the internal FMantenna contact is used. Stock store bought phones that ordinary non-techie people buy can't run this app. NOTE February 21, 2015: If Spirit Transfer v1 worked for you, but this redesigned 2015 v2 is not there, please email me on mikereids@gmail.com. It works great for me on my No.1 running CM11/FPX and CM12since at the end of December 2014.Confirmed works: Xperia, Ultra, No 1, No. compactный, T, SP, (Ihave (Ihave No.1 for testing, mainly on CM11/FPX and CM12.) Confirmed or probably not working: Xperia L, M, No 2, No 2 tablet, No. 3 and newer. The free v1 version is here to check if your Sony device cantransmit: Transmit v2 is currently based on Android 5.0 Lollipopre-architecture Spirit2 more info here: power is low, so the range is not very good. It works best like amethod for sending music from your phone to a car or home radio, which isvery up close. Sound quality is best with an antenna transmitter (wired headset cable) very close, or even wrapped around an antenna thereceiver. I use Spirit Transmit regularly myself, for extensive testing of Spirit2 FM to get an app on 13 Android Iown devices that supports Spirit2. The time during which I invest additional functions is proportional to the support of the company. Like Spirit1 and Spirit2 FM receiver apps, buying 'support spirit transfers' isn't just a once purchase. It's a songing technical support and upgrade feature for at least a few years. The Spirit2 FM Receive app now has a free open source version of GPLv3 Spirit2 Free with 90% of the full paySpirit2 application code. This code includes a more limited mode of transmission than this paid Spirit Transmit app. Thus, Spirit2 and Spirit Transmit support is also open source. Source here, and more details here: Start Spirit transfer and su provision on request. (If you don't know what SU is, Spirit Transmi is not an app you can run out of.) Spirit Transmit Version 2 (2015) supports RDS in from music playemetadata. To do this, you'll need to turn on the RDS Transmission Spirit when presented with a security system - the Notice Accessscreen.As of February 21, for RDS may need to manually install one or more experimental RDS settings according to the menu-Set-Tuner-COM: Transfer RDS PI, PT, PS and RT. If the wired headset is connected, it should start. Tune in as needed. Click on the frequency, or use up, down, or presets. Music and most other audio (except FM receipts and phone calls) should be transmitted at this frequency whenever SpiritTransmit is inrunning. The app sets the volume to the maximum for bestresults and disables the headset output at the end of each song. You can use most of the same features as with the Spirit2receive app. There is a home screen widget and display and lock the screen. Media buttons are not processed, even if the media player can handle it. The range is limited. Get the transmission and receive the antenna as close as possible. Wrap them together in length if possible. Thank you for your support... ! Mike. Spirit2: Real FM Radio 4 AOSP APK Spirit2 is a real, customized, ethereal FMradio app for root and android AOSP ROM'd devices. If you don't understand the root, the root, Look at Spirit1. Spirit does not require access toInternet. I cancel any on-demand order for 30 days, or much longer when appropriated. Please email mikereids@gmail.com to return, report bugs, or for older versions.
