Bokeh effect mode or background blur can easily be achieved in smartphones with dual cameras such as Honor 8 pro, Samsung Note8, Oneplus 5, iPhone 7, or 8 and so on. But if you have a normal smartphone with a single camera camera camera camera, then how to create a bokeh effect or reduce the depth of field? It's simple, you can use some of the best bokeh effect apps that allow the digital blur of your images. Also, if the object is at the right distance the single camera can capture beautiful images of the bokeh effect, like the DSLR bokeh photos even without any camera app. To achieve the bokeh effect in smartphone photos, you need to minimize the distance between the camera and the subject. For reference look at your eyes those work in the same way, for example, take your finger next to your eyes and see it, you will see that everything in the background is becoming blurring. But the problem is that only close-up or macro background shots can be blurry in a low-budget smartphone using a single camera. So, if you want to create a real professional DLSR effect like bokeh's wide shots, you need to use some camera apps like Google's camera. What effect is bokeh photography? Most DSLRs have the ability to focus on a particular object like our eyes to create a background blur effect. The bokeh subject is in focus, sharp and seems clear, however, the rest of the background becomes blurring. In a DSLR camera, this depends on the lens and the size of the aperture. However, when we talk about smartphone bokeh photos, we can not change the lens. In this situation, we should be completely dependent on the lens of the smartphone camera and its size aperture. Here are some of the best camera apps for Bokeh Blur effect photos like the DSLR 1. AfterFocus This photography app lets you create a DSLR style background blurred with a simple selection of focus areas when ringing images. To add a blur effect, you need to select the area accurately. It is one of the best applications to provide a professional bokeh effect, and also has various filters and effects. Here you can see a step-by-step tutorial on AfterFocus: Blur Background using Afterfocus AfterFocus Features: Choosing a focus area using a line of drawing around an object. The background blur effect includes lens Blur, Motion Blur and scaling effects of different aperture changes: no fading, normal and manual multiple filters for the foreground, background and whole. Effect - Vignetting, Color Mask, Sticker and sharpen. 2. Google Camera If you are just looking for beautiful bokeh effects in your mobile photos use the Google Camera app. It's a simple Android app, but with a great opportunity to blur the bokeh lens. You can capture images using the option The lens of the app and by using the moving verticle bar, you can separate the object from the rest of the background. Images taken by Google camera save after blurring focus shift shift this means you can shift the focus later too. This is the default app for Google Pixel and Nexus devices. To capture the bokeh effect with a focus shift you need to click on the lens blur option and focus on the object after that slide the phone slowly to the ascending side, as shown in the screenshot above. Google Camera Features: Auto HDR, automatically detects when HDR (High Dynamic Range and Low Light) use for capture. Slow Motion Video Fast Switch between video and photos SmartBurst Multiple photo modes such as lens Blur, wide angle, panorama, and photo sphere need Android 6.0 or above. If this app is not available in your country, you can use this mirror link: APK Mirror 4. Snapseed is another professional photo editor developed by Google. Snapseed is one of the popular and does not need introduction. Snapseed offers a wide range of editing tools including the lens blur option to add beautiful Bokeh to images for photographic portraits on pre-capture images. It provides about 29 photo editing tools such as RAW Development, Tune Image, Vintage, Turn, Perspective, White Balance, Brush, Vignette, Curves, Extension, Spot Lens, Vintage, Frames, Double Exposure and more... The app is available for both Android and iOS. You can see this screenshot for its lens blur function. Also, you can see: how to take a photo bokeh using the snapseed smartphone app 5. PhotoDirector Photo Editor App is another high photo editing feature of the smartphone app with bokeh effect mode. This allows you to capture live images of the bokeh effect, but has a limited area. In addition to bokeh, it provides many options that you can use to customize images professionally. Features: Adjust HSL sliders and RGB color channels Tone Adjustment Fast White Balance Correction Tweak Saturation Live Effects Collages Content-Removal Aware Tools Add and Customize the HDR Effects Photo Effects that it provides are Lomo, Artistic, HDR and Vignette. Blender tool to add extra image or layer effect and more... 6. Insta bokeh: The Insta bokeh camera mix camera app has a slightly different approach to give the bokeh effect. This free app is already a predetermined filter with a beautiful; effects sideways. You can choose any bokeh effect from a certain category such as romantic sky, gentle night, dream world and favorite text to mix and give a beautiful effect to your images. Features: Boqueh and light effect. Transparency Adjustments on the Effect of bokeh Drag and Fall / Turn Share Photos on Instagram another social network. Best Smartphone Camera Apps for Bokeh Effect. Verdict Though, we've listed six camera apps to create a bokeh effect, however, that we think you just need three apps to fill all your bokeh related requirements: Google Camera app, Autofocus, and Snapseed. And if you are looking to add some filters, then Insta bokeh or other apps listed in this article can be used. Here here Several smartphone camera review samples of image links where we captured some bokeh image effect without any software. Cookies Policy Visit the site External download site Bokeh app will help you create a true bokeh impact on your smartphone photos in a few clicks. It's not a problem if you don't have a DSLR camera to create a real bokeh. You can use one of these apps that will give your images an aesthetically beautiful blur produced by the lens. Top 11 Bokeh Apps Auto Spot Background IOS (en) Android - Spot background real AfterFocus IOS (en) Android - Smart focus area selection Bokeh Lens iOS - Magnifying Glass Real Bokeh IOS Android - Color Collector bokeh Portrait: Depth Mode Photos iOS Android - Depth effect blur in Insta Bokeh Android - Transparency correction Bokeh IOS Photo Editor - One Touch Effects Tadaa SLR IOS - Large selection of options Bokeh Android Cameras - Autofocus Blur Bokeh Background Android - Changing scale Bokeh effect A: Portrait and Auto Blur Background Android - Portrait Lighting Bokeh effect is used in photography to highlight the most important parts of the image. This effect can be applied to all genres of photography. Apps from the list will help easily improve your photos with this complex but beautiful effect. Blur Background is a really handy user interface The ability to save and share options for Improved Top-Class Blur tools is similar to the one offered by DSLR Camera Verdict: Auto Blur Background is a great bokeh effect app that offers a variety of tools for blurring photos and creating the Bokeh DSLR effect. The app deals with blurry backgrounds, completely blurry images and selective blur, etc. Here you will also see brush tools to blur the slightest area of the image through the rotating finger. Smart choice of focus area Double Photos Different styles of aperture similar to SLR Basic and advanced effects Easy to share a verdict: With AfterFocus, you can create blurry DSLR-style photos simply by defining the focus area. All you need is to grab one object and move it a little to the side to take another shot of the same object. The bokeh app will then analyze the images and identify the nearest object. In addition, the afterFocus background blurring effect gives your gradual transition between the edge of the background and the focus area for a more natural and professional result. AfterFocus automatically identifies the focus area even for with a complex form. Because of this feature, the bokeh effect of the iPhone app works great even on small screens. Simple User Interface Easy to Use Amazing Tool of Choice Convenient Settings Aperture Flawed Image Editing Options Verdict: Bokeh Lens has a high level of accuracy. The magnible is very convenient as it allows you to view the place you touch. You can also adjust the bokeh level (diaphragm) to control the area that needs to be blurred. Bokeh Lens is an outstanding app that allows you to create high quality photos of bokeh, but it lacks any other photo editing options. Keep in mind that the Bokeh lens serves the iPhone bokeh app only. 36 beautiful bokeh shapes Simple color choice bokeh (28 colors) Changing size and Opacity settings conveniently share on social networks Sometimes the app closes on your own small verdict images: Real Bokeh will help you add bokeh to the photos as well as apply beautiful effects of leaks and filters. In the app you will find 36 beautiful bokeh shapes, 33 light leak effects, 23 image filters and several bokeh colors with a simple choice of color (28 colors). The settings are very convenient and intuitive. You can create bokeh with one click, choose the size of bokeh, change opacity, etc. There is also a photo-sharing feature on Instagram, Facebook, Twitter, Tumblr, Flickr, etc. Fast and easy to use the simple depths of field editing blur levels Fast Verdict Focus: This iPhone bokeh app will help you control blur levels with ease. To focus on photography in a particular area, just use portrait mode. The depth tool is easy to use, as well as adjusting the thickness of the mask and eliminating flaws. You'll have complete control over the scale and blur of the levels for accurate image editing. The app allows you to selectively blur parts of the image so you can manually focus on the subject. You can also instantly save and share your creations on social networks such as Instagram, Twitter, WhatsApp, Facebook etc. 4 modes of camera Easy-to-customize effects Adjustable Transparency and Rotation Ability to Share Photos on Instagram and other social networks No major image editing tools Verdict: Insta Bokeh app designed mainly for users who want to learn how to have a successful Instagram. Insta Bokeh offers different bokeh effects and a camera with four modes. Romantic sky, gentle night or Dream World camera features allow you to find your favorite bokeh effect and Its with your shot before you take one. This bokeh effect app lets you customize the transparency of the effects you want to use. Despite the strengths of this bokeh app, it lacks regular image editing tools. So to make a better picture, it's better to use more than one app. 60 free effects Easy to change brightness or or One tap to add or remove the Instant Exchange effect Most effects are available in the paid version of Verdict: This is the best bokeh app because of the effects that can be added in one click. Its free version includes 60 different effects. There are different shapes, styles of light effects such as ring, vortex, fireworks, and more. These effects can be layered on a single photo and adjustable. You can easily move, rotate and increase the effects as well. In addition, you can change the opacity or brightness of the bokeh effects that you apply. Bokeh's premium photo editor pack offers more than 200 effects to improve your images. Excellent photo quality Various features Depth Field Settings Focus when shooting Verdict: It will take some time to create the bokeh effect with Tadaa SLR, but you will enjoy the results. To identify the area you want to keep in focus, you need to turn on the mask and Edges features and then draw that area with your finger. When you choose the focus area, go to the Blur and Bokeh tab, where you can experiment with Range or Aperture sliders if you want to achieve the best possible effect. While the Tadaa SLR is incredibly fun to use, it has its limitations - you can't set up a filter with 100%. Automatic Element Detection (Computer Vision) Effects Viewing in Real Time Adjustable Focus and Editing Mode Improved Performance Slow Work Error in The Beta Verdict: With the Bokeh Camera, you can create the effects of blurring and blurring the object's background. The app works fully automatically and uses computer vision support to identify an object. Because this bokeh app only works in beta, performance, function, and stability are still improving. However, it already has pretty good settings. You can customize the settings in image editing mode, view the effects in real time, and adjust the focus. Advanced Image Editing Tools Easy Focusing Scaling Built-in Camera Keeping Photos Hard Verdict: Blur Bokeh Von has tame and blurring features. You can click on the part of the photo you want to blur and put the right part in focus. You can choose a photo from the gallery or take it with the camera option. This is the best bokeh app because of its scalability, which helps you accurately view the blurry image and apply the blurring effect in the background. You can also adjust the intensity of blur. There are various advanced photo editing tools such as Cancel, Redo, Brush Size, and others. The size of the brush is adjustable to blur the image and background. SLR camera settings automatically categorize Photos Hand-selection masks For different types of portrait lighting Verdict: Bokeh Effect: Portrait and Auto Blur Background has made for

portrait photography, DSLR, automatic blur (background blur), autofocus, and large aperture simulation (bokeh effects) for scenes or photos with a point light source. The app uses AI to add the bokeh effect online for free. You can simulate the effects of a SLR camera with bokeh lens settings and different shapes (more than 70 presets). There is no need to use manual settings, as this bokeh app automatically categorizes imported images. In addition, thanks to advanced machine learning technology, the app automatically calculates the depth of field for each photo.
