Distribution of major natural resources around the world (including South Asia and the Indian subcontinent); factors responsible for the location of primary, secondary and tertiary industry in various parts of the world (including India) Important geophysical phenomena such as earthquakes, tsunamis, volcanic activity, cyclone, etc., geographic features and their location (examples: why coral reefs are located on the eastern side of continents, why there are no volcanoes in the Himalayas, why Japan is witnessing so many earthquakes, etc.) changes in critical geographical features (including bodies of water and ice caps), flora and fauna and the consequences of such changes (examples: coral bleaching, global warming and cryosphere, landslides in the Himalayas, shrinking rainforests, destruction of mangroves, etc.). Pmfias.com geography for geography we strongly recommend our own notes. You can get it in PDF format from here. Pros: Our notes save you a lot of time and money. Many complex concepts are explained in a very easy way to understand. Cons: Does not cover industrial location factors. You can mrunal.org/geomorphology to do so. Long notes (can't help. This is a compilation made from all the major books Mrunal.org Geography Pmfias.com Geography Geography and regular current affairs should be enough to cover geography for GS. If you prefer to read geography from major books, then keep reading. There is not one book for geography that covers everything (Pmfias.com geography and geography Mrunal.org - regular current affairs should be enough to cover geography for GO). Spectrum geography is one book that covers 60-80% of the geography of the curriculum required for GS geography. These are books written from an academic point of view. Reading these books is superfluous if you have not chosen geography optionally. Savindra Singh's physical geography covers only physical geography. Language is tough for beginners and non-geography students.
