Assessing the situation of the recipient of care in order to take the right action is part of the core competence of each nurse. The main prerequisites for this are the sensitive ability of perception and the purposeful ability to observe. Body Temperature: Standard Values and Deviations Subscribe to our newsletter now and you'll get a poster to boot as a thank you The Care Process is a z<iframe width= 440 height=315 src= frameborder=0 allow=accelerometer; autoplay; encrypted-media; gyroscope; picture-in-picture allowfullscreen work method that provides individual, focused and quality good care and relationships and problem-solving process. What is surveillance? A method in which the observer perceives human behavior and experience purposefully in certain conditions and without the use of measuring devices. Surveillance of medical care means targeted absorption of information. Perception is a complete process of recording sensory impressions and integrative processing of environmental and body stimuli. Surveillance of medical care means targeted absorption of information. Self-management: A method of purposeful perception of one's own behavior and experience of external observation: a method of purposeful perception of foreign behavior and experience. Participation: The observer takes an active part in the action. The observed person is aware of the situation of observation. Non-participation: The Observer does not participate in the active event. The observable don't get it is. Surveillance of medical care means targeted absorption of information. Author: AndiDefinitionPerception is an active process by which a person is connected to his environment (Gateway to the World). Perception Systems1. Physiological perception Processing of irritating signals in the sense of recording, rewinding. 2. Mental perception Processing information in the sense of comparison, mapping, evaluation and reaction. Perception sensesEye-eyes (also sense of balance)NoseMundSkinChanged our perception of the senses in old ageEyes Loss of vision, the visual field becomes narrower, diseases such as green or gray star. Ears hearing loss, sense of balance decreases. Nose Sense of smell subsides, anosmia and pathologically removed sense of smell. Mouth Taste changes, possible losses. Skin Sagitulate the skin, it becomes dry, thinner, worse circulation.Meaning changes for the old personInformalityIngressatism at the beginning, as if everything was still in the old. Takes off, losing contacts as a result. The quality of life is declining. Tasks/requirements of nurses Read the magnier, books with large font. Leave the furniture and other items in the same place. Instructions on irritation, for example, through basal stimulation. Make eye contact when communicating with a resident. Perception of LawsLaw structuring.The law of the figure and background.Law Of Meaning.Law Completion.questions to the General PerceptionPstead, add the following sentence: The experience and behavior of a person strongly depends on his perception. What is the difference between perception and observation? Perceptions occur automatically and unconsciously. Surveillance of the targeted perception, occurs consciously. Define the perception of the term Perception is an active process by which a person refers to his environment (the gateway to the world). Which two perception systems can be identified? Physiological processing of stimulating signals in the sense of line of recording and width. Psychological processing of information in the sense of comparisons, appointments, evaluation and reaction. Eye ears (sense of balance)NaseMundHaut How do perceptions change in old age? Eyes loss of sight, field of vision becomes narrower, diseases such as green or gray star. Ears The sense of balance is waning. Nose Sense of smell subsides, anosmia and pathologically removed sense of smell. Mouth Taste changes, possible losses. Skin Sagitludes skin, it becomes dry, thinner, worse circulatory. What reactions can lead to changes in the perception of feelings in old age in affected people? UncertaintyAgresive behavior.Behavior at the beginning, as if everything was still the same. Takes off, losing contacts as a result. The quality of life is declining. The bed dweller's room is charming and monotonous. What kind of behavior can this lead to? His feelings atrophied. ResignationLost joie de vivre. HospitalismHis infirmity aware of it, feeling useless, retreating into their world. What should nurses pay special attention to when caring for a person with hemiplegia as a result of apoplex? Complete all the handouts from the injured side. Place the bed in such a way that it sees everything from the affected side. If possible, have basic care done alone's activation of care. Stimulate residents to make him aware of his affected side again. What tasks do nurses perform against the background of changes in the perception of older people? Reading magnsel, books with large fonts. Leave the furniture and other items in the same place. Instructions on irritation, for example, through basal stimulation. Make eye contact when communicating with a resident. What stimuli are used in the Snoezelen room to perceive stimulation? FragrancesMoving Pictures.ChocolateLight ColumnsClassical music for relaxation. What are the goals of Snoezelen Therapy? RelaxationBeHappy. An alarming decline in the place of earlier times awakens. MotivationReething aggression. Share this post on... Twitter Facebook Google download special forces group 2 for android 4.0.4. special forces group 2 for android 4.0.4
