Fusion Food - which combines the elements of several kitchens has been featured on the recipe menu over the years. Upscale French restaurants use Asian soy, yuzu, herbs and spices in everything from soup to desserts. My go at the Thai diner features a take on the buffalo wings and my favorite Israeli place is sushi rolls with cream cheese and lox on the menu. Now this cross cultural mix has trickled down to the fast food chain. Danku offers Dutch food with Indonesian influence and is billed as a natural fast food chain? Intrigued by this hybrid phenomenon, which by the way gets rave reviews here in New York, we decided to try. One of our interns, Johanna Langi, is a senior at Baruch College in New York, of Indonesian descent, so we were particularly interested in her impressions. Here's what it had to say: If you're looking for exotic flavors, pass Meat Lover's New Amsterdammer. Basically it's a chicken and ham sandwich with basil mayo on panini bread. While it sounds more upscale than Mickey D, this fast food sandwich chain is still, well, a fast food sandwich chain. I had high hopes for Indonesian meatballs, and although expensive at $4.75 each, they were one of my favorite items. The texture of the meat was spot on and it was enclosed in a delicious brown sweet and savory sauce clearly derived from Kecap Manis condiment, which is a staple in every Indonesian family. Chicken satay with peanut sauce and side of Bami Goreng (Indonesian fried noodles) left much to be desired. To Satai was very similar to chicken in New Amsterdam, and the noodles tasted like Chinese Lo Mein. Peanut sauce was the only thing even vaguely Indonesian. Best Best The sample was Indonesian spicy beef with Basmati Rice, a passable rendition of classic beef rending, beef stewed in a very spicy brown sauce. Although softer than I'm used to, I could still try the spice diffusion. One complaint: More sauce please! Krokets popped out of the menu on me. My memories of my grandmother preparing these fried meats and potato patties are a blanket of comfort food for me. Unfortunately, Danku's version doesn't compare to my grandmother's. Outside was crispy, but inside was gooey, more meat than potatoes- in fact, it seemed that yesterday's spicy beef was recycled, giving stuffing that secret aura of meat that is so familiar to everyone who ate in the school canteen. While the Danku concept is promising: Take useful ingredients and combine flavors from different cultures to combine familiar and exotic, there is work to be done. So at this point, if you depend on fast food for a quick lunch, don't wish you lived near Danku. And if you really want to try Indonesian cuisine, prepare our version of Indonesian chicken test cuisine or for the taste of Denmark at home, our recipe is Danish meatballs. Since the flow of goods is so important in the business world, being dedicated to effective SKM is crucial. There are several different sizes of SKM. Some of these aspects require the management of an experienced professional with a degree of operation management, while others require the use of an integrated software system. Read on to learn more about SKM streams and what you need to know about the programs. Resource: The 15 Most Available Online Operations Management Programs (Bachelor's) What are the three SKM streams? To truly understand what's in supply chain management, you first need to understand the activities that need to be managed. All these activities have their own streams and movements. Currently, SKM has three different areas of traffic or flows: product flow, information flow, financial flow. In the product stream, products or materials will move from supplier to customer. It is also a stream where returns are sent from customer to supplier. In the information flow, orders are handed over to the supplier and the supplier receives special updates on deliveries and delays. The final stream updates financial flows, payment schedules and extensions of credit offers. Each thread is unique, there are different systems that should Learned. The different types of SCM software systems in today's world, any business that offers the public or other businesses products and services, must find a way to streamline the offer side of their activities. Taking the time to streamline processes, the company can keep their value products competitive, as well as maximize value for customers to keep their customers. One way to ensure everything is streamlined is to integrate the right types of SCM software systems and applications. The two most common and most popular types of SCM systems that exist today are application planning and execution. The planning software system will use formulas and industry standard algorithms to use data both inside and outside the enterprise to predict or predict the best way to fill an order. The goal is to quickly fill the order from the best place to reduce operating costs and remain the most profitable. Software execution programs focus on the processes after filling orders and before they are delivered. Under these programs, products and packages will be monitored and physical condition will always be stored and readily available. The purpose of this system is to ensure that materials and packaging can be shared or managed in the blink of an eye. With all companies that work online or are trying to compete with purely online businesses, supply chain management has never been more important. Companies really need to compare e-commerce or web applications that have all the SCM features that are needed to manage their resources, to reduce costs and plan their needs in the near future. When a company is fully stocked but doesn't have too many inventory, they can keep their product management costs down while keeping their satisfaction ratings up. Make sure you are really knowledgeable in managing supply chains and stay on top of your supply chain flow. Small business balance uses cookies to provide you with a great user experience.
