The lesser-known Android setting lets you stop calls by pressing the phone's power button instead of the End button on the screen. Sometimes when you get out of a call, your screen takes a few seconds to turn back, which can be very annoying. If you head into the settings for availability, hit cancellation, if you get a pop-up, and check out the Power Button Ends Call settings, you can finish it with a physical power button on your phone. It can be a little faster and more convenient, especially if your phone's proximity sensor refuses to cooperate. You can contact Whitson Gordon, author of this post, whitson@lifehacker.com. You can also find it on Twitter, Facebook, and lurking around our #tips page. There are almost an infinite number of ways to listen to music these days. You can stream them, listen to the radio, watch music videos, and old methods (like vinyl) are still humming together like they ever were. Sometimes, however, people would just hit the play and let it go without having to manage every little thing like playlists, order playback, or anything like that. Radio is not as popular as it used to be. However, it's still a great way to discover new music and just relax. Here are the best radio apps for Android right now. AccuRadioiHeartRadiomyTuner RadioPandora RadioRadio OnlineSiriusXMSpotifyTuneIn RadioXiliaLive Internet RadioLlcal RadioPrice: Free (with ads)AccuRadio is not as well known as other radio receivers. However, it happens to be good. It boasts more than 1,000 radio channels to tune in to. Each channel is tuned by the listener. There are unlimited passes, a rating system and you can ban artists and songs from your station. The result is a music station that ends up playing just what you like. There are some drawbacks. At the time of writing, there is no support for Chromecast. Servers also sometimes have some problems. However, other than that, this is a good experience.iHeartRadioPrice: Free/$5.99-$12.99 in monthiHeartRadio is one of the most popular solutions for radio apps. It has a large selection of stations to listen to, including FM stations and iHeartRadio's own stations mixed in. It's totally free to use (supported in streaming advertising), which is another good bonus. For those who want, iHeartRadio also comes with support for Chromecast and Android Wear. You can get a slightly better experience for $5.99 per month. You can go All Access for $12.99 a month with even more extra features, including On-demand Song Playing.myTuner RadioPrice: Free/$3.49myTuner Radio is another compelling option for those who love traditional radio station content. It boasts an impressive collection of more than 50,000 radio stations in 200 countries and territories. Territories. It has support podcasts, categories for different types of talk and music radio, and some little extras like sleep timer and signaling features. You also get support for things like Android Auto, Sonos, and most streaming sticks. Several user reviews complain about the occasional streaming drop, but it's otherwise a rock solid app for traditional radio fans. It's also free if you use Google Play Pass.Pandora RadioPrice: Free/$4.99-$9.99 per month Venerable Pandora Radio is probably the most popular of all radio apps. The app has made streaming random mainstream music and has enjoyed quite a bit of success over the years. Instead of focusing on specific stations, Pandora allows users to create their own stations. You can make them around your favorite artist, music genre, or even songs. Pandora offers playlists for streaming, but most people just create their own. You can also get a premium ad removal subscription for $4.99 per month. You can also go for the full $9.99 per month for Pandora Premium and get an on-demand song playing along with other features. Radio OnlinePrice: Free /$4.99 per yearRadio Online is one of the most traditional radio apps. The app has hundreds of radio stations that cover all kinds of content that are ready to stream when you want them. It includes both internet radio as well as some FM stations that support online streaming. If you go pro, you can get some extra features, including live radio recordings, a sleep timer, and more. It's an effective decision that does what it says it does. This is also a good option for those who want something really simple without a bunch of extra stuff. SiriusXMPrice: Free app /$10.99-$19.99 per monthSiriusXM satellite radio was one of the first really big pushbacks from standard AM and FM radio services. It has over 150 channels, including music channels, sports channels, and the venerable Howard Stern show. There are also three subscription models to choose from depending on what content you want to listen to. The app is slowly getting better and seems to be stable enough now to be enjoyable. It still has problems, so don't expect the perfect experience on the app yet. It's also cross-platform with many cars that have SiriusXM built in. This means that you don't need Bluetooth or any other connection to use it in many modern cars. SpotifyPrice: Free/$9.99-$14.99 per monthSpotify is another music streaming app that has put more emphasis on streaming over the last couple of years. Aside from genre, mood and specific performer stations, Spotify also curates unique lists such as the World Top 50 and playlists with new music you haven't specifically heard of. The free version gets you almost all radio features with the $9.99 cost of subscription ad removal and gives you extra features. It's one of the best Over there. Apple Music actually has a compelling streaming radio as well, which honestly isn't half bad. The service is also ramping up its podcast platform in a huge way, so it's good for talk radio these days as well. TuneIn RadioPrice: Free/$9.99 per monthTuneIn Radio contains a more diverse supply of radio stations that includes music of all sports, comedy, talk radio, news, and many other types of media. The free version comes with over 100,000 stations in total along with several million podcasts. If you go for the premium version, you can also get live NFL, MLB, and Barclays Premier League games, audiobooks, and removal advertising. The price varies depending on which region you live in, but it is a total fantastic radio service. It's not great for music, but it's one of the great radio apps for other interests. XiliaLive Internet RadioPrice: FreeXiaLive Internet Radio is not as popular as other radio apps. However, it is still full of possibilities. It itself contains 50,000 live radio stations, which should be more than enough for most people. There are also organizational features that allow you to save your favorite stations. It also includes themes, data management features, and some other user power features such as adding your own radio station URL link, equalizer, and Bluetooth options. The app comes free or paid, but the service is free to use in general. Local radio appsPrice: Free with ads (usually) Many AM and FM radio stations went online and broadcasting both on radio waves and over internet waves. Many of these radio stations have dedicated apps where you can stream your stuff 24/7, and interact with the radio station in other ways, including social media, giveaway information, podcasts, and any other promotions that the station can run. To be perfectly honest, most individual station apps are not too great, but they have improved over the years. They are worth seeing if you are only listening to one radio station. If we missed any of the best radio apps for Android, tell us about them in the comments! You can check out our latest app lists by clicking here! Each android phone has a standard set of buttons at the bottom. They can be physical - with parts that move - or they can be demanding by reacting to your touch. The order may change, but the functions are the same. You'll find: Home: Returns to the home screen. Hang on to see your most recently used apps. (Tip: Try clicking it again once you're on the home screen and see what happens.) Back: level in the app, or back page in the browser, etc. (Tip: Hold on while browsing to quickly access bookmarks, stories and most visited sites. (Tip: Hold on to the keyboard to appear.) appeared.) to the search function. Can be an app search, a Google search, or a universal search for contacts, bookmarks, apps, etc. that are in the phone. (Tip: Hold on to run voice search.) Most Android phones have four buttons, although sometimes the manufacturer will do without a search button. To keep track of screen time, go to the Settings for Digital Well-being and Parental Control' menu of the zgt; data management switch on your daily device usage. To install app timers, open Digital Wellbeing and Parental Control, and dashboard, select the app's icon, set a time limit for OK. To set up Bedtime mode, choose on the basis of schedule or when charging before bedtime and enter sleep and wakefulness. This article explains how to incorporate digital well-being and parental control on Android 10 and up. It also outlines how to set application timers, sleep mode, focus mode, and parental control. Android Digital Wellbeing tracks your daily screen time, notifications, and phone unlocks. Digital Wellbeing is available in the device's settings. You should include it as it is not the default. Here's how to set it up. Open settings. Click Digital Wellbeing and Parental Control. Click on the three-point menu in the top right and select Data Management. Switch to the daily use of the device. The circle graph on the Digital Wellbeing screen shows which apps you're using. Inside the circle you can see the total screen time, and underneath it, how many times you've unlocked and how many notifications you've received. Now your smartphone will record the use of apps, notifications and unlocking devices. You can also access digital well-being through the app label. Scroll down to the home screen and switch the Show icon to the app list. The Digital Wellbeing app has two types of tools that will help you reduce screen time and divert attention: ways to turn off and reduce breaks. The ways to disable them include application timers, sleep mode, and focus mode. Reduce Breaks sections have shortcuts to manage app notifications and Do Not Disturb. To shorten screen time, you can set a daily timer for the apps you use the most, so you don't get stuck down instagram rabbit hole or play the game when you have to work or interact with others. Once you hit the limit, you'll get a notification that the timer is over, the app icon will be gray, and you won't be able to open it until midnight if you turn it off manually. Click the dashboard. You'll see a list of apps you use more often Click on the app to see screen time, notifications, and the time open in a daily or hourly clip. Tap the hourglass icon next to the app to set the timer. You can also add a timer by clicking App Timer on the app information page. Set a time limit (all timers are reset at midnight) and press OK. To remove the timer, tap the bin icon next to it. Bedtime mode helps you roll drown out your phone and turn the screen gray scale, so you don't stay up late scrolling through social media or reading. You can set up a sleep mode based on a schedule or when you connect your phone to charge before you go to bed. In both scenarios, you set sleep and wakefulness time. Click Tune so as not to bother to turn on when you go to sleep and choose whether the screen goes gray scale. Focus mode allows you to temporarily suspend applications manually or on schedule. You can choose the time and day of the week or more. From here, you can also take a break from the focus mode if you need some time to fool around. In the Reduce Breaks section, you can manage application notifications and turn on the Don't Disturb mode. The last section for parental control. You can manage your child's account if you are the default parent account on their device. You can start setting up parental controls from the Digital Wellbeing Settings page, but then you'll need to install family link, the Google app. The app requires you and your child to have a Google account. Go to the settings of digital well-being and parental control. Click Parental Control Settings at the bottom of the screen. Click Start on the next screen. Click Parent. You'll see a tip to download the Family Link app. Download it and follow the clues on the screen. You need to link your child's email accounts to your phone before you can control your screen time and other settings. On your child's phone, go to the Well-being and Parental Control Settings program. Click Parental Control Settings at the bottom of the screen. Click Start on the next screen. Click baby or teen. Click to add or create an account for your child if it doesn't appear on the screen. Once you've added it, select it from the list. Then follow the clues on the screen. Requests.
