Posted October 26, 2014 by Baldwin File Size: 1.08 MB Fantasia's key image from Fotolia.com While most vehicles use a pre-programmed key that you insert into the ignition cylinder to start the car's engine, several Lexus models rely on other technologies to start the car. The driver keeps a wireless transmitter in his pocket, which automatically communicates with the Lexus and lets the car know that the authorized driver has driven into the vehicle. From now on, you can use push-start technology instead of a key to start a Lexus. Put your hand on the handle to open the Lexus door. Please note that this will only work if you have a SmartAccess key card on you. The car's sensors will detect the map once within the vehicle's short range, and the doors will unlock as soon as your hand gets close to the handle. If someone tries to force the door to open without having a SmartAccess key card, the security alarm is triggered and alerts those who are within reach. Make sure the car is in the park and push your foot down on the brake pedal. Wait until the ignition button is green. This safety measure ensures that the car is in a non-dissed state. If you could start the car without hitting the brake pedal, you could potentially damage the ignition system by trying to start the car while in gear. Click the ignition button to earn the Lexus engine. The button works just as if you inserted a key into the ignition as the fuel is released into the combustion chamber and ignited. This process is controlled by an electronic ignition module that is activated when the ignition button is pressed. Probably wise Owners of Lexus who read all the guide before using their car knew this, but there may be some people out there that for various reasons did not bother to learn more about their car.
