(4.5 mm) Lead Pellets Round BB in Darts/Bolts Magazine capacity of one shot (Pellets, Darts, Bolts) 18 rounds (BB's) Total length of 8.5 inches (21.6 cm) cm) 1 pound 8 ounces (680.4 g) Muzzle Speed 200 FPS Safety Cross Bolt OPERATING FREE: Follow these steps carefully and consistently. Failure to do so can result in serious bodily harm and damage to an air pistol. Release the slide latch located on the left side of the air pistol. Using the right thumb, release the catch by clicking down on the slide latch. The slide will snap back about 1/4 when released. Check out the animation below. Cocking Pistol Point barrel your air pistol up and grab the back of the slide with your left hand. Pull the slide back as far as it will go until you hear the click. The slide must now be 2 inches from its original position. Firmly grab the barrel of the gun with one hand (make sure to keep your fingers away from the trunk hole to prevent any injury) and press the slide on the other side until you hear the second click and it locks in place. The slide should return to its original position. The air pistol is now cocked and ready to be loaded or firing. SAFETY Engage Safety After the air pistol was cocked, always put it to safety, attracting safety. To do this, press the safety on the left side of the air pistol, thereby locking the trigger. Refer to the animation below LOADING NOTE: Follow the previous steps before trying to load ammunition. The barrel section will not tip until the air gun has been cocked. Do not try to snatch it open, as it will lead to irreversible damage. NEVER shoot an air pistol with a barrel section in an open position. To load the air pistol, you must press the boot button in front of the air pistol. This button is directly under the barrel and when pressed will tip up across the entire barrel section to expose the two loading ports. Refer to the animation below to load the BB point of your air pistol down and load up to 18 BB into the SMERA loading port (NOTE: To quickly and easily load BB into an air pistol one at a time, a speed loader is recommended). BB's are held in a log and released one at a time and are arranged automatically in a barrel during a platoon sequence; Be sure to tilt the barrel up while cocking an air pistol to bb feed properly. Pneumatic pellets are loaded one at a time to load pellets. To load, place the pellets directly in the barrel (bottom hole ROUND). Push the pellets into the barrel until the skirt pellets are completely cleaned from the barrel seal. The short rounded end of the cartridge seat will help you in loading the pellets. Don't forget to use only .177 caliber lead pneumatic pistol pellets. WARNING: Remove all BB before and shooting pellets, darts, or bolts. Never deploy pellets, darts or bolts to a square BB loading port as this will damage the air pistol. To load darts or Bolts Airgun bolts and darts are also loaded and shot one at a time. Tap Bolt Bolt Dart directly into the barrel (bottom hole ROUND) and make sure to fly the dart or bolt completely loose and clear of the barrel seal. The long, pointed end of the Marksman Ammo seat will help you properly place darts or bolts. Use only a .177 caliber air pistol darts or bolts. FIRING Prepare for the fire after loading, snap the barrel section down into place. Your air pistol is now cocked, loaded and ready to fire. Before shooting, press security on the Fire position, elm on the right side. Aiming and shooting safely you and others with you should always wear shooting goggles to protect your eyes when shooting any gun. Always aim for your air pistol in SAFE DIRECTION. Do not shoot on hard surfaces or on the surface of the water. The pellets can bounce or ricochet and hit someone or something you didn't intend to hit. Always choose your goal carefully. It is best to shoot at paper bullseye targets that are attached to a safe backstop. A heavy blanket should be hung behind the target trap to prevent the ricochet if you miss the backstop. Your backstop should be checked for wear before and after each use. Replace your back if the surface is worn or damaged or if there is a ricochet. When you are sure that the area around you is safe, pull the trigger to shoot. MAINTENANCE Gun Care Your air pistol should be oiled after every 200 to 300 shots for maximum efficiency. This lubricates an important firing mechanism and helps prevent damage to vital parts. To hush the air pistol, keep your fingers away from the trigger and keep the air pistol upright and unsmooded, as shown in the diagram. Place a few drops of SLIK 50-1 lubricant in the barrel. Leave the air pistol in this position for at least one hour to make the lubricant reach all the necessary parts. After extensive use, your air pistol may lose some of its power as a result of the wear and tear of the seal barrel and/or piston assembly. If this happens, you will need to return your air pistol to replace parts and maintenance. Marksman 1010C BB Repeater Air Pistol can shoot BBs, pellets, bolts or darts at a speed of 200 feet per second. You need a gun and release the loading port in the barrel to insert BBs or other ammunition into the cannon. You can then download up to 18 BBs or one pellet, bolt or darts. The opening release slide latch found on the left side of the gun just above the arm grip by pushing it down. When released, the slide will move backwards by about a quarter of an inch. Rooster the gun, pulling the slide back until it clicks - about 2 inches. Press the slide forward until it clicks into place. safety by pressing the button found on the left side of the handle right behind the trigger. You can then depress the release button of the boot port just below the muzzle of the gun. Then a section of the barrel pops up. Trunk. Barrel will not let go if the gun has not been properly cocked. The Loading Camera has a square hole where you can load up to 18 BBs. Just point the gun down and paste one at a time or pour in using the speed loader. A round hole just below the square for pellets, darts or bolts. Use only .177 caliber air pistol darts, bolts and pellets. Inserting ammunition through a round hole puts it directly into the barrel. Make sure the dart, bolt or pellets are completely past the seal of the trunk before closing the loading chamber. Camera.
