Devolver Digital brings to market the story of an unnamed girl in GRIS. You can witness how it returns color to your own life. This five-hour evocative experience comes through solving problems without using words. GRIS will pull you into its colorful world and wrap you in its beautiful design. Much like a journey, you travel through a strange world that evokes deep emotions in the process. The point is to grow to understand the character's trials and successes through color change from dark to bright. As the narrative weaves into the design, the trip becomes fundamentally beautiful. Unfortunately, when you take GRIS and compare it to Celeste, another emotional story based on travel, the run time is quite short. Although Devolver Digital has done a great job with the design, the game is not made to play. The puzzles that you have to overcome in the game defy play again, and the universe is not expansive enough to keep exploring. Where can you run this program? You can run this on Android 4.4 and beyond. Is there a better alternative? No, there are no better alternatives. Others that are similar to GRIS have their own niches. The journey has a stunning graphics, but provides a completely different tone. Celeste has a much darker but direct approach to fighting the fight. GRIS is a visually stimulating experience with its color-based narrative. The engine is well thought out and interesting. You will find that it doesn't take you very long to finish the story, but it will be worth the experience. Should you download it? Yes. If you value visual art, this is a game you don't want to miss. KrowD requires that your login account be set up in front of the restaurant where you are assigned to work to access relevant information. KrowD is an app for those working in the restaurant brand Darden, but this app comes with many challenges. KrowD is an information tool available to employees of any Darden restaurant, such as Olive Garden and LongHorn Steakhouse. Available information includes company news and a way to access your paychecks and benefits. You can log it all in with the option of logging in to your fingerprint system. Using KrowD will enhance your experience while working at one of the Darden restaurants. If you have an ID and password for the app, you can view schedules, change shifts, send messages, and receive real-time notifications from the app. KrowD suffers from many errors and failures. One of the most common problems is app updates. Its lack of automatic updates has the potential to leave you using a version of the app that no longer works. Entering a username and password on the login portal will log in to the app. However, you may need to repeat it several times because of an error. Where can you run this program? KrowD is available for devices running Android 5 and up. Top. Is there a better alternative? Yes. Slingshot: The Employee Planning App is a much better choice. However, there are no other options for Darden restaurant staff. KrowD is a poorly made application that can only be used by those who work in Darden restaurants. Should you download it? No. You should only get this app if you work at a Darden restaurant. StaffLin is an application for planners that is created to serve companies because they handle a lot of work shifts. This allows you to communicate between colleagues and allow employees to remotely request hours. StaffLin would be extremely useful for the company if it worked properly. When you open the app, you'll be confused about what to do, how to design closely. Another problem with the app is that anyone who wants to use it should buy it. There is no package company like Asana provides. Because of all the connectivity issues, StaffLin no longer works well to set up schedule preferences. The most useful thing about this right now is to view your work schedule if you can get it to sync with the team. You can do this and more with Ready, like setting meeting goals. You may have problems logging in. Once you get it, it often cuts or won't display parts of the system. In this respect, Humanity is a much superior application without errors. Where can you run this program? You can run it on Android 4.1 and beyond. Is there a better alternative? Yes. Done is an excellent work coordinator for smaller teams. Asana provides what StaffLin does, and more with its ability to organize work. Humanity works for the whole company and provides strong customer support. There is very little good to say about this app. The design of the app is bad in every way. Planning doesn't even work properly to encourage people to buy it, and logging in can even be a problem. Should you download it? No, there's no reason to spend money on this program. Get rid of advertising on your Android with AdLock. AdLock is a free Android app that will help you stop annoying ads for popping on your Android without the need for root access. The app will stop unwanted ads from ever appearing. Not only on apps, but also from the screen when on stand by mode. It will stop any form of ads including pop-up banners, flash banners, auto-start videos, audio ads, text ads, malware infected ads and spyware. It will also help you save on battery life. And finally, it will send you regular messages about remote threats amount of stored traffic. Download AdLock and block and delete all these unwanted online ads. Download We have a bunch of great ways to keep up with the latest from Android Central on your smartphone, tablet or computer - besides visiting the web page in the browser. Here's a look at our available downloads: Android apps We have a trio of apps, each serving a different purpose. The official app for the No.1 Android community on the planet! This is your home for the latest news, reviews, opinions, editorials, podcasts - plus our podcasts, videos, access to our forums, wallpaper gallery and more! More than 100,000 Android fans are installed! Download Google Play! If you're looking for a more dedicated Tapatalk experience for Android Central Forums, this app is for you. Installed by nearly 100,000 AC Forums users, you get access to all of our forums, personal messages and contests. Download Google Play! Google announced its news magazine-style app in December 2011, and Android Central was kindly invited as one of the launch day partners. We've got almost 1 million subscriptions, making us the largest Android site in the library. Sign up now! If you're looking for a quick and easy way to check out the latest headlines for Android Central give our Chrome expansion a shot. With one click you get the news. And another click makes you look at our various news sections. This is a great way to keep up with the latest news from the greatest Android site around. Download it from the Chrome Web Store! Free Android wallpaper Our readers love Android wallpapers - and they love sharing their favorite wallpapers. That's why we created our wallpaper library. Here you can find the coolest wallpapers used by people who actually love wallpaper. New wallpapers are loaded every day! Check out the wallpaper gallery! Android Central Pebble Look Face Are Pebble Smart Watches? Want to trick him with the most look Android mascot around? Now you can. We have our own Lloyd baked in the watch face, ready for immediate loading. Android Central Pebble watch face! Android Central on Google Google Glass now supports IFTTT, which means you can now shoot notifications on more than RSS feeds. So of course we did it. Click here for our IFTTT recipe to get Android Central Stories directly from Google Glass. We can earn commissions for purchases using our links. Learn more. Creating custom tunes on our phones is nothing new, but with today's devices, the process is now easier than ever. Here we show you how to make a custom ringtone for your Android device using a variety of techniques, including RingDroid, GarageBand, and AVCWare Ringtone Maker. Setting up your phone to play Ed Sheeran's newest tune every time your last Tinder dates calls have never been easier. How to make a ringtone using RingDroid RingDroid is an intuitive app that lets you create ringtones from any WAV, 3GPP, ARM, AAC, MP4, or MP3 audio file stored on your Android phone. This process is simple and easy to understand, after at least one or two attempts. The best part? It's completely free and you can create tunes without a computer at hand. Copying the song to the internal storage of the phone Song should be in the internal storage of the phone before you can turn it into a ringtone. How you do it is up to you, but there are several ways to do it. The retro way would be to connect the phone to the computer to transmit it manually. Also, upload a song file to your Google Drive account and then upload it to your phone. Create a ringtone with RingDroid Step 1: Running RingDroid. You can grab the app for free on Google Play if you don't have it yet. Step 2: RingDroid will list all the music on your phone when open. Scroll through the list, or use the search bar at the top, and find the song you want as a ringtone. Note: If you can't find a recently downloaded song, try closing the app and restarting it. Step 3: Click the title of the song to select it and click Trim to reduce it. Step 4: Adjust the markers and select the part of the song you want as a ringtone. Step 5: Tap the download icon in the bottom right corner as soon as you are satisfied with your choice. Step 6: Name the ringtone and export it. Assign a ringtone with RingDroid First, let's install a new ringtone using the same app. Step 1: Click Use as on a window that pops up immediately after exporting the trimmed melody. Step 2: Choose if you want to use it as an alarm, ringtone, notification, or any combination of these three. If you install it from the app's main menu, it's also easy to do. Step 1: From the main menu, tap the cropped tones, and then select the stored file. Step 2: Click and then use both. Step 3: Choose if you want it as an alarm, ringtone, notification, or any combination of three. Assign a ringtone through the phone settings menu Process can be a little different through phones and installed installed Version. For example, on many Samsung phones, you'll be on the Tap Settings app and then hit the Sounds and Vibrations tune. The following instructions use the standard Android 10 interface. Step 1: Open the settings and select the sound followed by the phone's ringtone. Step 2: Choose my sounds. Step 3: Choose the ringtone you want. Assign a ringtone through your phone's contact menu If you think a number of contacts deserve their own tunes, you can set separate tunes in the Contacts app. Just follow the steps above to make the ringtone and then assign it as follows: Step 1: Open contacts and choose the desired contact. Step 2: Click on the three points in the top right corner. Step 3: Choose a set of ringtones. Step 4: Choose the desired ringtone for this contact. Again, the process can be different on your Android phone. For example, the Samsung Galaxy A10e requires the click of a contact editing button to change the ringtone. How to make a ringtone using GarageBand (MacOS) GarageBand is another free alternative that allows Mac users to create their own custom ringtones for Android. It comes complete with all Macs, so there is no need for additional purchase. Make sure GarageBand is up to date before opening the app. Step 1: GarageBand opens with a new project, chosen by default, and a dedicated empty project. Click Select to start. Step 2: Select the microphone tile in the pop-up window to import the audio file. Make sure you don't have an entrance before clicking the Create button. Step 3: Find your song with Finder and drag it to GarageBand. It is loaded into the first (and only) track. Step 4: Click the Cycle button to the right of the Red Record button. Leave this button to turn on until the end. Step 5: Hover over the left end of the yellow light shown on the number line. Shift the arrow to the left or right accordingly to set the starting point of the ringtone. Do the same on the right end to set the stop point. Note that the loop is highlighted in yellow so you can see where the clip starts and ends. Remember that Android tunes usually work in 30-second (or less) loops. Step 6: In the bar menu, go to GarageBand's Preferences for Advanced and make sure the box next to Auto Normalize is checked. Step 7: Once you've settled on a selection of ringtones, click Share in the bar menu followed by Export Song on the disc. Step 8: Choose a name, save location, file format, and pop-up quality. Step 9: Click Export to finish. How to make a ringtone with AVCWare Ringtone Maker (Windows) AVCWare allows you to create melodies simply by selecting a song, selecting the part of the song you want to use, and exporting it as an MP3. Step 1: Run the program and click to find the song you want to convert. If you don't have the program already, you can catch it here. Step 2: Move the handles of choice to choose to choose the song you want to use. You can also manually enter the exact start of the ringtone and stop the times if you prefer. Step 3: Select the output file name and outlet Folder to save the ringtone. Step 4: Tap the iPhone icon in the bottom right corner. Once done, follow the steps above on how to set and assign tunes. Copying the ringtone for the internal storage of the phone Lee you create a ringtone on your Mac or Windows, you need to put it on your phone. Here's how to do it: Step 1: Connect your Android phone to your computer. Step 2: Drag and drop the new ringtone into the Ringtones folder on the phone's internal storage. If you don't have a designated folder of tunes, go ahead and create it. Step 3: Ejection your Android phone. Once done, follow the steps above on how to set and assign tunes. Also, download the ringtone to a cloud account such as Google Drive or OneDrive and then upload it directly to your Android phone - you don't need cables. If you haven't had enough music by the end of this guide, then check out our list of the best music apps for Android and iOS.
