Steve Brachmann Updated September 26, 2017 Designed to use middle school children and junior high school students, the Casio FX 992S Science Calculator has a keyboard with large, easy-to-access buttons, but can also complete 383 different features. The FX 992S has a dual power source, a battery supplemented with solar panels, for long life and low energy costs. This Casio scientific calculator can be used to complete various equations for engineering, calculus or any general education student. Click on the na button. Wait until the number 0 is displayed on the calculator screen. Continue to press the Na button until that number appears. Choose any calculation, display, or other types of modes that you must include on the Casio FX 992S to complete the equation properly. Press the MODE button found in the top right corner of the keyboard once to select from four calculation modes: General Computing (COMP), Standard Deviation (SD), Linear Regression (LR) and Complex Number (CMPLX). Once YOU've clicked MODE, select a number that fits the calculation mode you want to choose. Click MODE twice to bring up the display menu of selecting different units of measurement for equations incorporating angle measurements. ClickING MODE raises the display mode settings three times to a specific number of decimals or numbers. Four MODE clicks allow the user to choose engineering mode, and five brings up the ability to enter BASE-N mode to switch between system numbers if necessary. Enter the first digits of the equation that you want to enter into your casio FX 992S scientific calculator. Data entry keys consist of numbers 0 to 9, as well as a decimal key (.) Choose the operation you want to perform in the picture entered into the calculator display on your Casio FX 992S scientific calculator. , press the SHIFT, which lies in the top left corner of the keyboard, and then on the operational key for the time of this operation. Operations above the key and on the right can only be used by the SHIFT button when the calculator is in BASE-N mode. Enter the numerical figure into the calculator that follows in your equation. Choose another operation on the calculator or select an equal sign (=) to end the equation. By Michelle Enos Updated September 26, 2017 Casio is a Japanese electronics manufacturer such as watches, musical instruments, cameras and calculators such as the FX-260. FX is a scientific calculator that means that in addition to the basic functions of adding and subtracting a simple calculator, it can also perform more complex mathematical functions to solve algebraic equations. He doesn't have Learn how to use the basic features of the Casio calculator. The Na button is turned on and C clears the value displayed. Many keys are marked with two functions; Click the shift to use features marked over each key. Click AC to start a new calculation. Find the keys to the base calculation; The addition is to and the subtraction is-. Braces are also available, although the calculator uses the order of operations, that is, if you enter five plus four times six, FX will calculate four times six and then add five. Make constant calculations, enter the number, and then click me -, x or ÷ twice to make the number permanent. Every time you click on me, this constant will be added (or subtracted, multiplied or divided) by a number on display. For example, if you're a three plus four equal, the display will show the answer as 7. If you press me again, the calculator will add four to seven and display 11. To clear the constant, click AC. Casio FX can also be used to add, subtract, multiply and split fractions. Use the b/c key for input fractions. The key a refers to the mixed part of the number of the fraction, b is the numerator (top number), and c - denominator (lower number). To enter three-quarters, press three, then b/c, then four. The responses to fraction calculations will always appear in a decimal form. Use b/c to convert the decimal lobe displayed into a fraction. Use the multiplication feature to find a percentage of the number; Use separation to calculate the percentage from one number to another. For example: To find 15 percent out of 100, enter 100 x 15%. To find out what percentage of 100 is 15, enter 100 ÷ 15%. Calculate square root and power with Casio FX. X with superscript two square number, while X with superscript three cube number. X with the Y superscript raises the number to a different power. For example, to enter three to power five, enter three, then X superscript Y key, then five. THE FX also has a square root key and a cube root key (the cube root key looks like a square root key with a little three in front of it). The X and 1/y key in the superscript calculates a different root of the number. For example, to find the fourth root out of 100, enter 100, previously mentioned key, and then four. Not all Casio FX features are listed in this article. For more information, check out the guide listed in the resources section of this page. Matthew Rhys, who played one of the most fully fleshed out gay characters in pop culture history as Kevin on Siblings, is Philip, her husband and fellow spy. They have two children who were born and raised in the United States and have no idea who their parents are. I hesitate to give much more details of the plot. I am pilot on FX last week and knew almost nothing about it that really added to the effect of the show. Let's leave it to this: with Ronald Reagan back in the White House and the Cold War escalating to what we, as viewers know, will be his conclusion, Elizabeth and Philip's life is about to change. The show will premiere on January 30. The Americans were created by Joe Weisberg, who worked for the CIA in the early 90s and who also wrote the spy novel Ordinary Spy. (Media nerds: Weisberg's brother is Jacob, slate, and their mother, Lois, was the subject of the famous Malcolm Gladwell New Yorker story Six Degrees by Lois Weisberg, about people who are connectors.) Weisberg's pilot for Americans is layered with global and personal politics. The show is great looking and gray in that three-day condor way, and period details - remember that the early 80s still looked 70s - feel right so far. The installation of fleetwood Mac's chase scene borders on the brilliant. And Weisberg gave Reese in particular a lot of pre-case - is Philip a killer spy, a sensitive soul, or an agent who began to love where he lives? I'm looking forward to finding out. Along with any other gadget he killed (camera, radio, GPS units, etc.), the smartphone wasn't very friendly to our good friend, calculator. But Casio hopes the design will make you want to buy a calculator again: their new S100 flagship calculator puts a premium on materials and craftsmanship to try to make you forget that your iPhone comes with a calculator app for free. Calling it an artisanal calculator, Casio says the S100 is coming out to commemorate the 50th anniversary of casio's first built-in memory calculator, '001', first released this month in 1965. And, from a sheer point of view of functionality, the S100 won't be all that much more powerful than '001: you won't find graphics features, apps, Wi-Fi, or built-in games here. So what's going on for him? Skill. Made from high-quality aluminum alloy, the S100 has V-shaped insulation keys that prevent the device from shaking when calculating, as well as a high-quality, non-reflective display for reading numbers. It can also fit more numbers on display than most calculators: up to 12 at once. What I think is not so impressive, but it seems much more than I could fit on a calculator screen when I was a kid. It also has a solar battery that will last seven years on a single charge, ideal for calculating tips when the sun is dying out. In short, casio's new S100 calculator is probably the most promising calculator since Dieter Rams designed Brown ET-66. Calculator, by the way, only costs \$49 to buy a new one today. The Casio S100, on the other hand, will cost \$220, a little more than the contracted iPhone that made it obsolete. This ET-66 looks pretty tempting right now, doesn't it? (via Wall Street Journal) (Pocket-lint) Casio's latest Exlim digital camera offers plenty of features, but is it enough to look after a camera densely populated from more traditional brands such as Nikon and Canon? We'll take a closer look. The 5.0 megapixels, 3x optical zoom Exlim EX-500's slym-line design (89 x 57 x 21 mm) and the 2.7 inch LCD on the back of the camera are the first things you'll notice when you look closely at this digital camera. The bright clear screen is noticeably larger than most digital cameras available at the moment - save the Sony T range - and the extra 0.2 inches means it's even bigger than the latest iPod or Creative zen Vision: M basically, if you have one of them, you don't need to worry about viewing images for anything else. For the most part the buttons are in the right places, although we continued to press the review button when we wanted to zoom in and the camera mode button when we wanted to zoom in. Users of the Canon or FujiFilm camera should not have the same problem as Casio, as they put the zoom switch around the shutter button. Connecting to a PC or Mac through a docking station, and it is here that Casio shows the first slit in its armor. To connect the camera to any computer, and you will need a docking station. It's a pain to carry around if your docking planning is on the go and there's no easy way around. However, the inclusion of the dock means that desktop users can easily connect the camera to upload images. The download is fast and easy thanks to the support of THE USB2.2 camera. Casio boasts that the EX-500 houses its own SUPER LIFE lithium-ion battery that can take up to 500 shots on a single charge. We're not sure we've taken that many, but we've used it solidly for a week and it's still going. This is certainly surprising given the large LCD, but it seems Casio managed to eek out enough juice for us not to complain about the lack of an optical viewfinder to keep the battery charge. When it comes to shooting the EX-500 does very well with a quick response time. Also, with 31 Best Shot modes ranging from standard portrait to autumnal colors there's an installation for almost every situation. The modes are available through the button on the back of the camera, and our only concern is that you can easily spend more time searching for which mode to shoot, rather than actually getting on with taking the picture at hand. Taking a picture will require you to invest in an SD card. The camera comes with 8.7Mb of built-in memory, which equates to about three images optimal settings before you run out of space. Using the Best Shot mode has certainly improved the photos we took, as did the addition of the ExiLIM engine Casio Anti Shake feature. For the lazy, the camera is also sporting a round best shot mode that goes out of its way to cope with any situation. In our tests, the camera was good at different images we tested it for. Especially berries and green-lit party photos (countdown to the Xbox360 launch if you're interested). Similarly, London's night scene with its various light sources, moving vehicles and black skies shows the camera well coped in difficult situations. We especially like the color of the camera. Verdict at 279.99 pounds Casio is a solid camera that will produce good results. The big screen will appeal to the party set, which would like to share the images right after they have taken them and the end results are good for printing too. Things to keep in mind are the need to lug the dock around with you if you hope to be in the dock on the go and the fact that you will have to invest in an SD card from day one if you are looking to take more than three photos at a time.
