Collections of Book Tools All The Tools Harvard ManageMentor Case Research Journal Search on Topic HBR Home September 26, 2013 2 min Read What if you could use your mind to telepathically monitor the actions of someone else? It sounds crazy, but Harvard researchers are at least one step closer to making Reality. #insert, related here In a recent laboratory test, people at Cambridge, Massachusetts University were able to use the human mind to control the physical movement of a live rat. Here's how the system works: a person wears the standard standard Brain to Computer Interface (BCI), and the rat wears a reverse computer to the brain interface (CBI), according to a report from the ExtremeTech.com. The rat interface also includes non-invasive technologies that can excite a specific area of the wearer's brain neurons using an ultrasound signal. From there it gets a little tricky. A person's interface is able to detect when it looks at a particular pattern on a computer screen. It then sends a command to the rat's interface, causing an ultrasonic signal to be sent to the part of the rat's brain that controls the movement of the tail. Researchers report that a person's BCI accuracy is 94 percent, and that it usually takes about 1.5 seconds for the entire process - from a person deciding to look at the screen, to the movement of a rat's tail, ExtremeTech.com reports. (By the way, is it just me or is that rat in this video look like it's the size of a small dog??) Thus, this technology is still in its infancy. Ideally, a person just has to think about action in order to make it happen in a rat. And be able to cause more complex actions or feelings. But what can be the market for such technologies? Transferring thoughts to others, let alone? Or something more nefarious as mind control? The government is already spying on you on the Internet. Do we need our minds under control, too? (Don't answer that question.) What crazy apps and gadgets have you come across lately? Let us know by emailing FarOutTech@entrepreneur.com or by telling us in the comments below.
