Are you ready to sell your device or hand it over to a new owner? Maybe your phone isn't working properly, or you just need to start over. Either way maybe sometimes it's best at the factory to reset Android to get it back, as it was the first time you turned it (at least software wise). Let's show you everything you need to know about the process. Editor's note: This is a guide to the factory reboot of Android put together using the Google Promotions operating system and Android 10 user interface. Manufacturers often change the user interface and the way they do certain things. Setting up layouts and button combinations may be slightly different depending on which device you have and what version of Android it uses. We'll include some guides to plant reset Android devices that are popular at the bottom of the article. Word of warning: First things first, let's open aside. The Android factory reset will remove all your data and return the software to its original state. This means that all apps and data stored on your device will be deleted. Make sure to back up time with all the important files and data before you go through the process. We have a guide on how to back up your Android phone's backup device right here. Here: How to back up your Android phone. Try device to find another solution first. We know that starting all over again can be a hassle. The backup storage process is not easy, and reloading all the data can take a long time. Not to mention that it can negatively affect your data if you are not connected to Wi-Fi. That's why we often recommend finding a simpler solution before the factory reset Android. If you're going to plant a reset of Android because of phone malfunctions, you can try to find your problem in out of the manual for Android problems and how to fix them. Check it out: Android Problems and how to fix them. If none of these solutions work, you can always perform a reboot or a soft reboot (hold the power button for 30 seconds) that won't delete all your data. If you've exhausted all the troubleshooting and need to plant reset Android, then keep reading. Plant reset Android with settings. If you decide to plant to reset Android, the most convenient way to do it is through customization. Here's how it's done. Make sure the device is connected or has enough battery to go through the reset process. Open the Settings app. Select System. Expand Menu by clicking Advanced. Go in reset settings. Hit erase all data (reset plant). Click on Erase for all the data. Enter the PIN if requested. Choose to erase all the data and let the phone do Case. More: How to plant reset Google phone. Factory reset Android with the recovery Mode. Make sure the phone is off. Tap and hold power and Volume Down buttons at the same time. Keep clicking on them until the screen starts. Start screen that points to power button, text and navigation navigation Appears. Now you can use the Power button to make choices and volume keys to navigate. Click The Volume Down button until you see the Mode. Press power Recovery button to select it. The phone will restart and show the Android robot in trouble. Tap and hold the Power button, then press the Volume Up button to hold the Power button. Use volume buttons to highlight the Wipe/Factory reboot data. Click the power button to select the option. Confirm by choosing Yes and let the phone do its thing. Then choose the reboot system right now. Source: Harish Jonnalagadda/Android Central there are a number of reasons why you may need to plant a reset of your Android phone. Maybe your phone is overloaded with apps and running slowly, or you've downloaded the latest update, and this is causing problems with the phone's functionality. Maybe you just want to reset it because you sell your phone (you always have to do it when selling an old device, by the way). Here's how to plant a reset Android phone through your phone settings or through recovery mode. Before we get started, know that the factory reboot will erase all the data on your phone. If you don't have backup contacts, photos, videos, documents and everything else (preferably in the cloud), you should do so now. Not sure where the backup time of your data before the plant restart? Read our guide on how to do it first. Given the variety of phones available on Android, I will use the Pixel 3a and Samsung Galaxy A51 as examples for this guide. Pixel is a good baseline as this process is almost identical on Android One devices from the likes of Nokia, Xiaomi, Motorola, and other companies like OnePlus that retain a stock user interface. As for the Galaxy A51, the phone runs the Samsung One UI, and with the company being the world's largest Manufacturer of Android by some significant margin, it makes sense to see how things differ. With that aside, let's get started. The easiest way to plant a reset phone is through the settings menu. The location of the factory reset option may vary slightly depending on the phone you're using, but once you've found a backup and reset menu, you should be in clear. As the plant reset Pixel / Android One phone Click on the settings icon from your home screen or app drawer. Swipe up to scroll down at the bottom of the settings menu. Tap the system. Source: Harish Jonnalagadda / Android Central Hit Reset options. Choose to erase all the data (reset plant). Swipe up to scroll down at the bottom of the page. Source: Harish Jonnalagadda / Android Central Hit phone reboot button. Enter the PIN And select Continue. Choose to erase everything. Source: Harish Jonnalagadda / Android Central Your device will reboot and you can go through the original installation as if it were a new phone. How to Plant Reset Samsung Phone Click Settings Settings from the home screen or app drawer. Swipe up to scroll down at the bottom of the page. Click on the general management tab. Source: Harish Jonnalagadda / Android Central Hit Reset. Data reset Hit Factory. Scroll down to the bottom of the page. Source: Harish Jonnalagadda / Android Central Hit Blue Reset Button. Enter the device's PIN and click Next. Click Delete Everything. Source: Harish Jonnalagadda/Android Central Your phone will reboot and you will have to go through the installation process again before you can recover your data. As the plant reset your phone through Recovery Mode Source: Harish Jonnalagadda/Android Central If your phone is running in upgrade problems or if there is a malfunction that prevents the device from being downloaded, you'll be able to plant reset, heading into recovery mode. At a high level, you'll be able to log into recovery mode by clicking down on the volume and power buttons at the same time. The process changes a bit depending on the device you use, as we'll see later. Before we reboot through recovery, you need to know about a security mode called Factory Reset Protection. Google rolled out factory reset protection (FRP) a few years ago, and the feature is now standard on all phones running lollipop and above. Essentially, FRP ensures that someone can't just plant a reset of a lost or stolen phone and customize it as a new one by loading it into recovery mode. The mode requires you to log in to a Google account associated with the device after the factory is reset. If you fail, you won't be able to start installing. Based on what I encountered, FRP kicks in when you reset your device through recovery mode and is not a problem when you reset through the settings. If you are interested in learning more about the feature and how it works, you should take a look at this excellent article on the subject: So if you want to sell your device and are considering a reset plant, the best option would be to go through the aforementioned page settings. If you can't load up on your device and need a way to reset your data, you can go into recovery mode. Now that you understand the risks, here's how to reset your phone through recovery mode. As the plant reset through recovery mode on the Pixel/Android One phone If your phone is on, turn it off. Hold the power and volume buttons down. Instead of loading normally, you'll see Start in the arrow pointing to the power button. Here you use the Volume buttons to scroll and the power button to select the option. Click Volume Down until you light up the recovery mode. Click the power button to start recovery mode. When your phone You have to see a screen that says: No command with an Android robot in distress. Tap and hold the power and volume buttons together to load the recovery mode. Use Loudness buttons to scroll highlight the Wipe/Factory reboot data. Click the power button to choose. Select and select Yes to confirm the reset. Once the reset is complete, you will be returned to the same recovery menu. Click the power button to select the reboot system right now. Your phone will power up and be reset to its factory setting. Your phone will reboot and you will have to go through the customization process again before you can recover your data. As the plant reset through recovery mode on your Samsung phone If your phone is on, turn it off. Hold the power and volume buttons at the same time. You should see the Samsung logo followed by installing a screen update system. After a few seconds, a message without command should flash on the screen. Wait 10 to 15 seconds on this screen and the device will go into recovery mode. Use the Loudness buttons to scroll through the menu and power button to make a choice. Highlight the Wipe/Factory reboot data. Click the power button to choose. Select and select Yes to confirm the reset. Once the reset is complete, you will be returned to the same recovery menu. Click the power button to select the reboot system right now. Your phone will power up and be reset to its factory setting. The next time you turn on your phone, you'll go through the initial installation process as if it were a brand new phone. Once you've set up, you can restore the data wherever it comes from. As mentioned earlier, if you reset your phone through Recovery Mode, Factory Reset Protection logs in if you haven't deleted your Google accounts from your device. So if you're selling the device, make sure you delete your Google accounts and lock the security screen before you make a hard reset through recovery mode. The king of the middle-class Pixel 3a XL cameras brings the flagship camera into the middle class segment. The equipment itself is pretty decent, and the phone is first in line to get new upgrades. If you care about quick updates and want a great camera, the Pixel 3a XL is still the phone to get. Get.
