From smartphones and tablets to laptops, USB-C is finally gaining traction as the future of connectors. However, some companies have accepted this means they can get rid of other ports, including HDMI, USB 3.0, and more. If you want to recover some of these lost ports, you need one of the best USB-C adapters. It's not perfect, but the USB-C adapter gives your device more versatility than before. Here's our list of the best USB-C adapters you can buy today. Read also: Understanding different types of USB cables Best USB-C adapters: Anker USB-C Hub Adapter Satechi Slim aluminum adapter Vava USB-C Hub Adapter HyperDrive Duo 7-in-2 Uni USB-C Hub Nonda USB-C Adapter Editor Note: We will update our list of the best USB-C adapters. The Anker Hub Adapter First Up is an Anker USB-C Hub adapter. The adapter features two USB 3.0 ports, an HDMI port, an SD card reader and a microSD card reader. The HDMI port supports up to 4K resolution at 30fps, although it also supports a 2K resolution at 60fps. While the choice of port is good, there is no USB-C port. It's not a problem if the device has more than one USB-C port, but those with the iPad Pro, Apple MacBook, or other devices with one USB-C port should take note. Satechi Slim Aluminum USB-C Multi-Port Adapter If you want a USB-C adapter with a great port, take a look at the Satechi Slim Aluminum USB-C Multi-Port adapter. It has six ports: two for USB 3.0, one for microSD cards, one for SD cards, one for HDMI, and one for USB-C. The USB-C port supports the Power Delivery charging protocol and provides up to 60 W output. Vava Hub Adapter Just in case you are not satisfied with six ports, the Vava Hub adapter has eight. Ports include two USB 3.0 ports, one USB 2.0 port, an HDMI port, two microSD and SD card readers, an Ethernet gigabit port, a USB-C port with 49W input support, and even a headphone jack. The headphone jack is especially useful for iPad Pro owners, as the iPad Pro doesn't have one. 4. The HyperDrive Duo 7-in-2As while the HyperDrive Duo 7-in-2 was specifically designed for the Apple MacBook Pro and MacBook Air, the adapter works with nothing else. However, we would be remiss if we didn't mention this unique adapter. As with other adapters, the HyperDrive Duo has two

USB 3.0 ports, two microSD and SD card readers, and an HDMI port. However, there are two USB-C ports instead of one. Even better, both ports support Thunderbolt 3 and 100W PD. The adapter is equipped with two USB-C ports because it occupies two USB-C ports on the Side of the MacBook Pro or MacBook Air.5. Uni USB-C HubIn terms of port selection, Uni USB-C Hub has a healthy choice. There are two USB 3.0 ports, two microSD and SD cards, an HDMI port and a USB-C PD port with up to 100 W input. Where the Uni USB-C Hub is different from with its removable USB-C USB-C hub Other adapters are equipped with permanently attached hub connectors, which can lead to concerns about durability. Nonda USB-C AdapterUnlike of any of the aforementioned adapters, Nonda is not a hub. Rather, it's a miniature USB-C for USB 3.0 adapter. When we say miniature, we mean it. That's less than a quarter. The adapter is equipped with an LED light to let you know when it is connected to the device. Just make sure not to move around it too much, as it stirs a bit while plugged in. However, it's a cheap and ultra-portable way to add a USB port to your device. The best 3-in-1 USB cables are Android Central 2020 If you look around your desk or in your backpack, chances are you have devices that don't all have the same charging port. The chances are even greater that you have a large number of cables that you carry with you that end up getting confused and taking up too much space. Fortunately, there are quite a few great options for 3-in-1 USB cables that will remove the need for extra cables while keeping your devices charged. Pick Anker's staff is one of the biggest names in the charging business, so it makes sense for the company to offer a 3-in-1 charging cable. The Powerline II cable includes a micro-USB, USB-C and lightning tip for you to swap between them, so you can really charge any device you have. \$18 on Amazon Spigen's DuraSync Cable ticks all the boxes you might want from a 3-in-1 charging cable. Three charging tips are always attached to the cable, along with the ability to charge and synchronize, and measure in nearly 5 feet. In addition, DuraSync is rated to work with a fast charging 3.0 for those times you need to charge faster. \$16 on Amazon Moshi takes a different approach to keeping additional charging tips attached to the main cable. Instead of using plastic, this charging cable uses a wicker cable to attach the tips to the main cable. In addition, you will get a fast charge and transmission speed of up to 480 Mbps, as well as a 10-year manufacturer warranty. \$29 on Amazon This 3-in-1 cable from Native Union is made from a braided nylon jacket that allows the cable to withstand even the most durable use cases. The company also includes a one year without worry warranty, but it is important to note that you will not be able to use this if you want to transfer any data. \$40 on Amazon POWERADD is another company focused on charging products that have been around a bit, and its multi-charge cable is a great option for those multiple lifestyle devices. The cable itself measures in just over 3 feet, and is made of a braided nylon jacket that won't get tangled (if you do it on purpose). also throws in a two-year limited guarantee if something goes wrong. The \$12 on Amazon Belkin's 4-foot universal cable is perfect to throw in your bag and take with you anywhere. There are Micro-USB, USB-C and Lightning Lightning with the latest sports cable control hooks. In addition, you'll be able to use this with any of your favorite devices that have different charging ports. \$22 on Amazon Having all your charging ports at the ready is not appreciated. With the Sinstar Phone Charger, the charging tips are magnetic and interchangeable, so it still supports data synchronization in addition to charging. In addition, the cable itself is made of wicker nylon to improve durability. \$18 on Amazon These magnetic cables are becoming more and more popular and the HSE cable is no different. The tips are interchangeable, so you can quickly swap, or you can leave them in your favorite devices, so you just have to move the cable yourself and let the magnets do the rest of the work. \$21 on Amazon's Nomad line of products is known for having some of the most durable options for devices. Kevlar Universal Cable is no different, with its thick plastic cable ties and reinforced Kevlar cable material. This cable measures at just under a foot in length, so you can tuck it into your bag and go. \$30 on Amazon Which cable should you choose? The Anker Powerline II is a fantastic choice for those who have many devices but don't want to carry around a lot of different cables. The cable comes from a brand you know and trust and includes a hassle-free lifetime warranty, so your cable can get replaced in case something breaks or goes wrong. Perhaps the most interesting 3-in-1 cable is the magnetic charging cable, because you can just switch between devices easier than ever. The ability to just leave the charging connector in your device will help protect it from dust, and you can just rely on a wicker cable without fumbling with tangled cables. We can earn commissions for purchases using our links. Learn more. The best USB-C cables are Android Central 2020 Because USB-C Power Delivery allows for higher charging speeds, you have to trust your devices with only the best USB-C cables because when they break down, they can fry the device or start a fire. Back in the early days, you had to be extra-confident that your cables were properly made, but these days USB-C cables reached a safe, stable standard (for the most part). If you need a USB-A port at the other end or you went full USB-C to USB-C, there are large, secure USB-C cables that will be available there without spending your arm and leg! The best USB-C for USB-C Personnel Cables choose If you want the latest specification and the highest data speeds you want USB 3.1 Gen 2, which can support up to 10Gbps data speed and up to 100W charging speeds. This humble black or white cable boasts 3.2 Gen 2 specs, so it too can 10Gbps data speeds at a slightly lower price than Anker. Generally, the longer the cable, the slower it is charging, but Uni offers cables 6.6 to 15 feet long, so you have a cable that you can trust to achieve from this pesky plug-in to be up to At the same time getting 100W charging. From \$11 on Amazon This cable may not be as fast with data or power as the Powerline II, but it's a much more durable double braided nylon that can charge up to \$60W. \$30 on Amazon Available in 19 color combinations from 1-10 feet, regardless of your taste, you can get the size and shade you want for your 15W charging cable. From \$12 to Amazon Aukey cables hold up for a long time, even if they don't come with the same solid travel event as Anker. This two package allows you to leave one at home and the other lives in a purse or backpack. \$9 on your generation's Amazon Watch when buying USB-C cables It's hard to go wrong with an Anker cable like the Powerline II, but holding a case that 6ft powerline comes with is very useful in keeping your cables neatly in your gear bag. The powerline is still a USB 3.1 Gen 1, and it's charging all my Chromebooks at full speed. As USB-C becomes an industry standard, having a sturdy cable can be used for anything more than convenient, it's an investment. USB 3.1 Gen 1/Gen 2 isn't the end of all-be-all C-to-C cables since then, after all, except for output 4K video or laptop charging, it's more than most users need, so if all you need a USB-C CABLE is to charge your phone, you can save a few bucks by choosing for a USB 2.0 charging cable like WiRoTech with its many color options. The best USB-C for USB-A cables While C-to-A doesn't offer nearly the speed C-to-C Power Delivery 3.0 does, the quickcharge 3.0 has nothing to sneeze at. More importantly, most computers and chargers we already have USB-A ports, but can't have USB-C ports, so it's worth keeping some C-to-A cables around, especially if you have a OnePlus or Oppo phone whose fast chargers use USB-A ports. The staff to choose this 5-pack has C-to-A cables in length from 1-6.6 feet, so you can stash the short cable in the car and the long cable in the bedroom. \$20 on Amazon Available in 3 and 6-foot length, powerline cables should last until you migrate from USB-C to USB-A chargers in the next few years. From \$13 on Amazon If you want a cable that will work with the Warp Charger your OnePlus phone has come with, you have to grab a chic red official cable from OnePlus. From \$20 to OnePlus Monoprice makes electronic accessories of any shape and size, and its USB-C cables come in eight colors ranging from 6 inches to 6 feet long. From \$9 on Amazon This two packages are right corner at both ends, double braided nylon in the middle and all awesome. Right-angle cables are great in the car or on the go. From \$12 on Amazon This 6-foot cable can charge your phone fast and double braided nylon shells should help keep the cable off during day-to-day use. From \$7 on Amazon Buy USB-C cables that have been in the past; USB-A is on its way from USB-C to USB-A cables becoming safer these days although imperfect cables still slip in from time to time - and it's hard to go wrong with any of the cables listed above, although I'm partial to the AUKEY 5-pack with its several lengths and spare parts, as it's a bundle you can buy and probably never have to buy a C-to-A cable again if you lose cables once a month or your dog gets into them. If you just need to, it's hard to beat the value of the Monoprice palette series, and in the end, life is too short for boring tech, so get yourself a colorful cable that's easy to spot in your gear bag. What you need to know before you buy USB-C Cable Source: Ara Wagoner/Android Central there are many different specifications out there with USB-C cables, and some of them overlap, so let's look at a few things real quickly: USB Type-C rules just for physical connections - data speeds are covered by other rules. You can think of USB-C as a set of rules that exist just to make USB connectors, cables and connectors smarter. So just because the cable says it's a type C doesn't mean it works with all the standards, it just means that it connects to a C. USB Power Delivery connector is a certified USB standard designed to improve charging speed and flexibility when charging devices, since power can be sent or received by an PD device. Power chargers can reach or over 100 w, which can cause serious damage if you don't use the right way, but PD standards are designed to prevent overheating and recharge when using it with a wide range of devices with different energy needs. USB PD 2.0 and 3.0 are different from USB 2.0 or 3.1, and many cables will include both certifications, as USB Power Delivery is part of USB 3.1. Power delivery can also go beyond USB to other types of connectors, but since we're talking about USB-C cables here, let's not go too far down the rabbit hole. If you plug a USB 2.0 cable into a USB PD 2.0 wall charger, the highest charge speed will be only 15W - maximum cable. To charge your phone, the 15W is fast enough charging, but it won't be fast enough for many tablets or Chromebooks and other laptops. If you want to buy one C-to-C cable that can charge your laptop and phone, buy yourself a USB 3.1 cable with PD charging; 2.0 ok, 3.0 better. We can earn commissions for purchases using our links. Learn more. More.
