It has a simple interface, but includes all the features needed for a pleasant viewing experience. Some of the most important features included in the browser are gesture controls that you can use for a variety of functions by gesticulating on the screen, the ability to quickly switch from one tab to another, and the ability to search for something using voice commands. In addition, the UC Browser Mini for Android offers a night mode so you can surf the Internet without much light, although your eyes can feel a little tense, as it often does when you're trying to find something at night and you're already in bed. THE UC Browser Mini for Android is a competent browser that, despite a wide range of pretty good features, is still lacking compared to the best android browsers such as Firefox, Chrome, or Dolphin Browser. With time and updates, however, it will continue to improve and will soon be even with all of them. This version of the UC Browser - which is a mini - is very close to the normal version of the same browser and offers an experience very similar to the traditional UC Browser 8.7, although it is more light and fluid and is ultimately ideal for less powerful devices. UC Browser is a brilliant Android browser - and that's why UC Browser isn't exactly unknown. Since it was generated more than a decade ago, it has been moving up the world to the point of what has now become one of the most popular browsers to use worldwide. It comes from China, where it occupies two thirds of the total market share. Lately it has exceeded 100 million active daily users and its localization policy has catapulted it beyond its borders with impressive growth, topping direct competitors like Opera Mini and becoming the busiest mobile browser in countries like Mexico. But what makes UC Browser special? Here are some of its most appealing features. Read more often
