Facial masks have come into vogue this year, first because of smoke from Australian wildfires and then because of the global coronavirus pandemic. While accessories have been prevalent in Asian countries for a long time, 2020 has seen them widely accepted internationally as health issues dominate the news cycle. While face masks are primarily tools for health protection, a host of interesting, eye-catching designs have emerged as they have quickly become a must-have accessory. From cute to practical to political, here are some of the best face masks of 2020.

1. Knit monster mask This mask won't protect you from viruses, but it will probably encourage others to keep them socially distanced. Image: Erara's world is monstrous, so here are some monstrous masks to match it. Icelandic artist zreare has worked in sculptural knitting for years, but has only started adding soft teeth and tongues to face masks in 2020. Now face masks are becoming such a necessity, and part of our lives I thought it would be interesting to translate my ideas into this form inspired by current events, Erarari told Mashable in an email. The result is a series of grotesque masks that will surely encourage others to keep their social distances. Ererere sells knitting patterns for some of her sculpture elements, so you can create your own personal horror mouth. Her knitted masks are designed for aesthetics rather than safety though, so you'll have to wear another protective mask underneath them.
2. Face masks are vaguely disturbing, but also quite practical. Image: Rest risk face the idea of printing faces on masks so they work with facial recognition originally started as a joke, but designer Daniel Baskin is now working on actually creating masks. Baskin Maskaike service intends to first launch fabric masks with people printed on them who will not unlock the phone. However, it also develops contour masks that work with the Face ID iPhone, provided that your masked face is registered as an alternative appearance. Print half the face on them, and vual: practical yet disturbing phone unlocking masks. Making iPhone masks compatible isn't the only advantage of this project, Baskin told Mashable some people think they will be useful in hospitals. Waking up in a room of faceless masked doctors can be disturbing, but if the masks were uniquely printed on them, maybe being in the doctors' room would be a warmer or easier experience. It also offers an easy experience with a very cool Baskin Apple mask inspired by the Son of Magritte Man. It won't unlock your phone, but it will make you talk about your socially remote grocery store run.
3. I don't Breathe masks Some anti-police brutality protesters put George Floyd's last words on their masks. Picture: Tony Gutierrez/AP/Shutterstock Thousands of people took to the in protest this year, rallying against police brutality and systemic racism in the wake of the death of George Floyd. The 46-year-old father died in May after a Minneapolis police officer handcuffed him and sank him around his neck for nearly nine minutes, ignoring his cries that he couldn't breathe. Protesters diligently wear face masks that currently serve a dual purpose of protecting their identity, as well as slowing the spread of COVID-19. Some have taken it one step further though, writing I can't breathe through the masks. These were the last words of Floyd and Eric Garner, another black man who died in vain at the hands of the police. If any mask design perfectly encapsulates 2020, then this one.
4. Clear Face Mask ClearMask has been designed to help people who are deaf or mild-hearted. Image: Clearmask While face masks are important for public health, they create new problems for people who are deaf or mild-hearted. Many rely on lip reading to understand what others are saying, so being unable to see the lower half of people's faces can be infuriating and isolating. Transparent face masks such as ClearMask and Communicator have been designed to address these issues. Originally intended for medical personnel, the pandemic has now sent demand for these masks soaring. Swiss researchers are also developing a transparent surgical mask that does not use plastic shields. HelloMask is designed for biodegradable, more breathable, and will have no problems with sweating.
5. Hijab mask Halima Aden hijab set is designed to be comfortable to wear for hours. Image: Any clothing for health workers wearing an abrasive face mask during long shifts can become painful. If they wear a hijab, it can also become uncomfortable hot. To mitigate this problem, fashion start-up Anywear has teamed up with Somali-American model Halima Aden to develop a series of practical but attractive masks for women who wear hijabs. Since many women wearing the hijab work in health facilities, I wanted to make sure they had a convenient option to wear a mask while keeping their hair covered, said Aden, herself a former hospital staff. Frontline workers still have to wear an N95 mask under a hijab kit, as this is not up to the standards of individual protective equipment. Instead, the mosaic mask is designed to cover the N95 mask. Each hijab set includes a matching head wrap and face mask made of breathable fabric, and a built-in extension allows the wearer to comfortably secure their mask behind their head. It's a cute option for any hijab, even if they don't work Health. Anywear also donates a medical cover with buttons for the medical officer for each set bought.
6. Beaded plague mask Every character on this mask makes sense. Image: Dolores Seagull Beak shape plague mask not not not most people are associated with traditional art, but it made sense for Cree artist Dolores Seagull. The seagull is a member of Weenusk First Nation in northern Ontario, and has been a bead for decades. I came across this plague doctor mask and it reminded me of the ceremonies we attend, Seagull told CBC, talking about his beautiful beaded mask. The seagull made its mask after seeing the Breathe Facebook group, founded by mestizo artists Natalie Bertin and Lisa Shepard. The couple asked traditional artists to design masks using traditional materials - an effort to strengthen the community amid the pandemic. The mask itself is the initial inspiration, Shepard told CBC. We learned early on that the mask does not protect (the owner) from COVID-19. When I wear a mask, I protect you, and I care about the community. The Seagull mask is deeply symbolic, with bubbly flowers to represent earth and medicine, three circles representing life, and two parallel zippers for your eyes to see, keep you in balance and have faith.
7. Facehugger Masks there are fortunately no chestbursters involved. Image: Christina Rodo's fiber art fever masks competitions have been launched since March, prompting fiber artists to produce incredible designs that vary greatly in practicality. While they're all worth checking out, one likely to inspire glee is Christina Rodo's felt facehugger mask. I was inspired by the facehugger of Alien, Rodo told Mashable. It immediately occurred to me, because, like the virus itself, it is terribly scary and sucks the life out of you, keeping you from breathing. The Portuguese artist took three days to make her wool mask, using a wet felt body and needle felt for details. Like the Ererere monster masks, Rodo's alien focuses on art, not on protecting people from COVID-19. This makes thematic sense though - Xenomorphs are not known for being particularly concerned about human health and safety. Rodo isn't the only person who brought the iconic movie villain into our gruesome reality. German artist Lady Frankenstein also shot him, although her sculptural clay mask looks much less comfortable. All these masks are great in different ways. But in fact, the best face mask is any mask that protects you and the people around you. Whether you are looking for a convenient way to shield your nose and mouth while running, hiking, or while cycling, this neck gaiter is a popular solution. It doesn't have a filter, but its polyester microfiber is breathable, in-the-wicking, and cooling. Because of its flexible design, you can wear it as you want (it can even double as a headband). The thin material is easy to machine wash. Choose from more than 40 colors and patterns, some even featuring moons, roses and skulls. Some reviewers that this gaiter is a comforter than traditional traditional Because it lacks ear hoops, although keep in mind that it is not as effective as the mask is designed with layers of fabric. Useful review: I bought this type of tube mask because I wear glasses, hearing aids, and a wig or knitted hat. I especially don't want something else hanging on my ears like masks with loops or elastic that can accidentally pop out my expensive hearing aids Plus they're trendy, so I have one to fit each outfit. I wear mine around my neck all day and pull it on my mouth and nose when I go in public. PinterestAll's share of data and statistics is based on publicly available data at the time of publication. Some information may be out of date. Visit our Coronavirus Center and follow our live updates page for the latest information about the COVID-19 outbreak. To curb COVID-19 transmission, the Centers for Disease Control and Prevention (CDC) recently began recommending the use of facial tissue when you are in public. But why exactly that? Several recent studies have shown that SARS-CoV-2, the virus that causes COVID-19, can be transmitted even when the person who has it has no symptoms. If you have contracted the virus, it can happen when you: Presymptomatic: You have a virus but have not yet developed symptoms. Imptomatic: You have a virus but do not develop symptoms. There are a few simple techniques that you can use at home to make your own face mask fabric with a filter. Keep reading to learn how to make, use and care for a homemade mask and filter. You will need the following materials to sew a face mask with a filter: Cotton fabric: Try using cotton that is tightly woven. Some examples include quilted fabrics, fabric T-shirts, or a high-threaded tissue count made of pillowcases or sheets. Resilient material: If you don't have gum, some household items that you can use include gum and hair ties. If you don't have these at hand, you can also use string or laces. Filter: The CDC doesn't suggest using a filter, but some people may feel that it offers a little more protection. Coffee filters are readily available in many homes. You may also want to consider using part of a HEPA vacuum bag or an air conditioning filter (look for fiberglass-free products). Just to be clear, there is no scientific evidence to support the use of these types of filters. Sewing materials: These include scissors and a sewing machine or needle and thread. No worries! You can still make a simple face mask fabric with a filter, even if you don't know how to sew. This example uses bandana, gum and a coffee filter. Just follow the steps below. Plan to use the mask when going out especially if you're going to be around other people. Some examples of when to wear a mask include when you: getting food or other necessities, necessities, Before you go out wearing a mask, make sure it is: properly secured with ear loops or tieshas snug yet comfortable fitallows you breathe without difficultyis consists of at least two layers of fabricTry to avoid touching your mask while you wear it. If you have to touch or adjust the mask while you have it, be sure to wash your hands right after that. To take off your mask: Make sure you have clean hands. Remove the mask with loops or ties. Do not touch the frontAvoid touching your mouth, nose or eyes during removal. Wash your hands thoroughly after you have removed the mask. Facial coating is recommended to the public for the use of surgical masks and N95 respirators. This is because these two types of masks are in limited supply and are needed by health and first aid workers. Some people should not wear face covering. These include: people with breathing problems under the age of 2 years, who are unconscious or incapacitated, who cannot remove the coating without assistance, keep in mind that wearing a face mask is not a substitute for physical distancing (aka social distancing) and other preventive measures. You should still try to stay at least 6 feet from others, wash your hands often, and clean surfaces with a high touch often. One of the main advantages of wearing a face mask fabric is that it helps protect others. Remember that people who are imptomatic or preimptomatic can still transmit SARS-CoV-2 to others when they speak, cough, or sneeze. Wearing facial coverings helps to contain potentially infectious respiratory drops. In this way, you can prevent the virus from being unknowingly transmitted to others. But can a homemade face mask also help prevent COVID-19 from getting sick? Let's look at it further. A homely face mask is not as effective as other types of masksA 2008 study compared N95 respirators, surgical masks, and homemade face masks. N95 respirators have been found to provide greater protection against aerosols, and home masks provide the least. But a home mask better than anyone at all in a 2013 study had 21 participants make a homemade face mask out of a T-shirt. These homemade masks were then compared to surgical masks for their ability to block bacterial and viral aerosols. Both types of masks significantly reduced the transmission of these aerosols, and surgical masks were more effective. The researchers concluded that while homemade masks are less effective, wearing one may be more beneficial than wearing at all. It is important to clean the fabric of the face mask after each use. This can be done with a gentle loop on the machine or wash thoroughly by hand using warm, soapy water. After washing, dry the mask in the dryer at high temperature. If you don't have a dryer, you can hang a mask mask Dry. Make sure you remove and get rid of the filter before washing the mask. Once your mask is completely dry, you can put a new filter in it. Anytime the filter gets wet from your reparations, get rid of it and wash the mask. It is now recommended to use facial covering tissue when you are in public places to help prevent the transmission of COVID-19. This is because it has been found that people without symptoms can still transmit the SARS-CoV-2 virus to others. You can make a simple face mask with or without a filter at home using common household materials such as T-shirts, rubber bands and coffee filters. You can even make a mask without knowing how to sew. Always be sure that your home mask is tight, but does not interfere with your breathing. Remember that homemade face masks should be washed and their filter replaced after each use or if they become wet. If you find that the mask is damaged, replace it. This is.
