Where he Excels Contacts really won our hearts a few months ago when we came across him and since then it has only gotten better. Since our previous favorite, Smartr Contacts, got eaten by Yahoo when they purchased Xobni, the company that built it, we were looking for a replacement that got the job just as good, and Contacts does the job just as well, if not a little better. It shouldn't be anyone's. that Google Contacts is long overdue for an overhaul, and while the default contact manager for Android phones is passable, it doesn't offer quite the same level of features as a more reliable app like Contacts does.

The app is completely free, ad-free, and gives quick access to any contact you need to look, see, by searching or viewing your latest or most relevant contacts. Android: Contacts is one of the most useful address books we've seen. It combines photography with... Read moreContacts does a great job at emphasizing the social elements of keeping in touch with your contacts, and we really like the way it brings together all your social networks and updates in one view, just click on their actual contact information. As soon as you open the app, any person you need to communicate with is in one tap (or less, if you want to call or text, you can just press their photo for a long time). Another faucet and you're up to speed on their lives and what they've been doing lately. The purpose of the app is not only to be an address book, although it is exceptional in doing so (you can quickly search, sort your contacts of the people you communicate with most often or the ones you want to see in the first place, and more), but also be the tool you turn to regularly to keep up with your friends, communicate with them, and stay in touch with the people that matter to you. Only one small way contacts 'proves the point by notifying you when one of your friends has a birthday. You receive a notification at the notification bar, and the app reminds you to wish your friend, mom, cousin or old school friend a happy birthday. It's a trifle, and definitely not a banner feature compared to all the others, but it drives the point home. Where it falls ShortContacts has a few caveats. First, when it comes to Android, the app relies on your Google contacts. if your Google contacts are a mess, or if you have old contacts that you used to email all the time but now never do, Contacts can be smart but not smart enough to sort that out for you. You will inevitably see people on your list of contacts or grids without a profile picture and little additional information related to them. The app does go out of its way to show you the only people on your grid you have phone numbers and extra details for, but still, it's as much of a Google fault as it is anyone else. Put your Google contacts in order and combine duplicates before using the app, or at least after you've installed it. Contacts does a great job of merging duplicate contacts if you forget to do it for one front. Secondly, while his contact manager is fantastic, the set and SMS tools included in the Contacts leave much to be desired. The dial has a tight interface that is easy to fat finger and hard to use, especially when compared to stock sets, and the SMS app is solid (and I really love the pop-up notification when I get a new But it's nothing to write home about. However, even if you hate it, you can still use your preferred set and SMS-Contact app doesn't stop you. Don't discount the bill Google's address book and contacts. It already exists, and on most Android devices you can easily combine disparate contacts and add social media profiles to one contact card so you can see all the human information on one screen. The trick here is that in order to do this, you must have the right social networking apps installed on your phone and you should allow them to sync that network's contacts with Google Contacts on your phone. It may get a little tricky at times, but it works. You don't get a relationship history, ongoing updates, photos or contacts organized by relevance and importance, but it definitely gets the job done. Depending on the phone you have, your OEM may even have included a really good contact manager. DW Contacts (free, 2.1) looks pretty rough around the edges and certainly won't win any design awards, but it's fast and trying to incorporate a number of features above. You get contact images and a good grid layout for your contacts, an event tab that is perfect for birthdays and anniversaries, a built-in set, drag and drop contact organization, long click contact options, and more. The app also includes a built-in call filter, so your contacts can only call you at certain times, you can silence your phone at night, but still let important calls through, block all anonymous calls, and so on. It will even track how many minutes you have left on your billing cycle. GO Contacts (free, 2.0) deserves a mention, if not for a different reason than its incredible popularity. Again, it's more of a contact and replacement set, and its claim to fame is the fact that it's customizable and you can download skins and themes for it, but it offers some functional features as well. You can easily search for contacts, drag and pull them into user groups, type or SMS by entering part of your contact's name, and easily combine duplicate contacts. Beyond that, though, his focus is on form rather than the kind of function we're looking for here. There are tons of contact managers who are essentially replacements and skins for built-in contacts and a set of applications that we didn't mention because we were looking specifically for tools that replace your address book with something more functionally useful. Even so, we're sure to have missed some, and there's definitely something to be said for the various built-in contact managers different manufacturers include their devices. On one phone, you can hate it because it's bare bones and ugly. On another device it can be beautifully fast and functional. Check yours before you replace it. Two Android customers provide the best Simplenote experience.
