The combination of small size, sound quality and price makes the JBL Flip 4 the best around. Don't rethink it, the best Bluetooth speaker under \$100 is the JBL Flip 4. Bluetooth speakers are a dime a dozen, and if you look long enough, you can convince yourself that you need to spend hundreds of dollars on the latest product from a reliable audio company just because it sounds great or it looks great. The truth is, no. However, a decent Bluetooth speaker can go a long way and there are many great options available. For a closer look at the pros and cons of each choice, make sure to check out the full article on our Brother SoundGuys website. At this point, we'll be working down our list of the best Bluetooth speakers under the \$100. Best Bluetooth speakers under \$100: JBL Flip 4 Bose Soundlink Micro UE Wonderboom 2 Sony XB20 Anker Soundcore Flare Editor note: We'll update this list of best Bluetooth speakers under \$100 regularly as new launch devices. 1. JBL Flip 4 The JBL Flip 4 is the perfect combination of size, durability and sound. The JBL Flip 4 comes from a reliable line of available bluetooth speakers and carries the torch perfectly. In addition to being an impressive sound given its size, it also has a number of practical features such as the IPX7 waterproof assembly and 12-hour battery life. Of course, the new JBL Flip 5 is available, but the only real improvement is the switch to charging USB-C. Aside from that, the Flip 5 feels more like a step backwards, given that it no longer has a 3.5mm socket. If you want one of the best speakers around, the Flip 4 is basically the same speaker and will save you some money along the way too. 2. Bose Soundlink Micro The Bose Soundlink Micro makes a great companion because of its rigid build and small size. Bose can spend most of its time making audio products at a higher price, but every now and then it makes a bang for your dollar product that is too good to go away. Soundlink Micro is that product and has earned a spot on our best Bluetooth speakers under the \$100 list. It has an IPX7 waterproof build and a hard rubber build so you know it can take a beating, but it's the versatile clip on the back that really makes it unique. You can clip it on almost anything and it will stay in place without problems. This makes it a great option for tourists or bikers who want a speaker that you can clip on a backpack. It also gets very loud. While the sound quality definitely deteriorates at higher volume, it's still not bad for such a small piece of plastic. One of the drawbacks you have to deal with is the sub-par battery that manages to last just over four hours and then need to be recharged using microUSB. If you can live by doing so, then you'll have the hard little speaker you can take with you anywhere. 3. UE Wonderboom 2 Gigant plus and minus signs make volume adjustment simple but controls beyond this are limited. While it's not the most exciting speaker around, the UE Wonderboom 2 is a great waterproof option for one particular reason: it floats. There are many speakers that are waterproof, but that doesn't mean much if you drop it into the lake. Wonderboom 2 will float on top of the water for easy search and it's also IP67 rated so the water won't hurt it. On top, there is a small bungee cord to connect to different things, and there is even a bass pulse mode so you can hear the low end of your music better when you are outdoors. Mind you, it's still a tiny speaker, so it doesn't really matter, but the sound quality exceeds expectations, making it one of the best Bluetooth speakers under \$100. 4. Sony XB20 Top part of Sony XB20 has an extra bass button for you bass head there. The Sony XB20 is a simple speaker that does exactly what it advertises: plays music and can emphasize bass notes. It doesn't have a unique, rotary design. Instead, he chooses a simple rounded box. Although it has an IPX5 certificate protecting it from water, it is not waterproof, so you don't want to submerge it. However, in typical Sony fashion, it has a bunch of solid technologies inside, like the built-in NFC for easy pairing and LDAC support, which allows more data to pass between a compatible source device and a speaker. Although the LDAC isn't perfect, it usually results in higher quality streaming which will come in handy when you hit that extra bass button. It's hard to have a list of the best Bluetooth speakers under \$100 and don't include Sony. 5. Anker Soundcore Flare The Anker Soundcore Flare is almost like Flare 2, with the exception of an additional upper LED ring on the second generation model. Anker Soundcore Flare packs a punch on the price. The Anker Soundcore Flare is a non-head meow for those who want good sound and unique design. The cylindrical shape allows it to fit into most standard-sized winks, including a car or backpack, making it super portable. In addition, the IPX7 build, tastefully LED light strip along the bottom, and the ability to play the sound in 360 degrees sets it apart from the package when it comes to performance too. Of course, there are no high-quality codecs, which could be said, but it does not sound bad. Although it's a little lacking in the battery department for just 5.5 hours of playback at 100%, you can easily do it longer if you're listening to music in normal volumes. What you should know is there aren't many things to be aware of with Bluetooth speakers as there are with other audio hardware, but there are still some important factors to consider. IP Ratings Wirefield This IP Rating sums up everything nicely for the purposes of this article. One of the most important things to consider when searching for the bluetooth speaker environment in You're going to use it. If you plan to take it anywhere outside or poolside, then a waterproof or waterproof rating is highly recommended. In the chart above, you can see that this means that at least the second number in the IP ranking should be at level four or higher. If you're going to use a speaker doing things like hiking, camping, or even on the beach, then you also want it to be protected from dirt and dust. In this case, the first number must be at least five or higher. This is basically all you need to know for the purposes of this article, but we recommend reading the full explanatory to learn more about that IP rating. Bluetooth codecs If you really want to dig into this part of Bluetooth audio, it's worth checking out an article where Lily Katz explains everything you need to know about Bluetooth codecs. The good thing is, you don't need to know all this for the purposes of this article. Instead, all you really need to know is that some Bluetooth codecs allow more data transmission between devices, leading to higher sound quality and better sound. Of course, sound quality is probably not the reason you're looking for a sub-\$100 Bluetooth speaker, but that doesn't mean you have to settle for something that sounds awful. Why you should trust SoundGuys SoundGuys is the brother of an Android body site that goes to everything you need to know about audio. Whether you're looking for feedback on a new speaker, a list of the best headphones, or just want to learn how some of your favorite audio gadgets work, the SoundGuys team has made it their mission to explain it all. And this completes our list of the best Bluetooth speakers under \$100. We'll add more models to the list as soon as they run. If you're preparing for a carrier switch, there's a good chance you're trying to leave the big three behind. U.S. Cellular slots as the fourth largest U.S. carrier, bringing with it five million customers in more than 400 markets. As a network that is outside the big three, you may have a number of questions about switching. Keep reading and we will do our best to put your mind at ease. See also: The best U.S. Cellular Deals currently available We will look at all U.S. Cellular plans, both before and after payment, as well as important information about which phones you can use. If you're looking for another way to save money, we'll touch on a large MVNO that uses the US Cellular network as part of its service too. Ready to see what happens when you go beyond the big three? Let's get back to it. U.S. Cellular on the look of US Cellular launched in 1983 as a majority subsidiary of Phone and Data Systems Inc. based in Chicago, the carrier has a plus better business bureau rating, it has been an accredited business since 2010. U.S. Cellular Does Not Have a List List complaints, although its customer rating is just above one star. The carrier's 4G LTE coverage extends to all 50 states, although its 5G network is limited to areas of Wisconsin, Iowa and Illinois - regions close to its headquarters in Chicago. If you want to check your local coverage, you can check the coverage map here. The postpaid U.S. Cellular plans US Cellular's post-paid options are pretty simple - there are only three options, each with distinctive features. You can choose a simple baseline that covers the basics or spend more for everyday and even better plans that offer unlimited service. Check out the review of all three options here: Basic Everyday Even Better Talk - Text Unlimited Unlimited Video Streaming 480p Standard Definition 720p High Definition 1080p Full HD International None 500MB data 100 minutes of conversation 100 texts Canada and Mexico 1 GB data 200 minutes of conversation 200 minutes of conversation 200 texts Canada and Mexico back PayN \$5 back if you stay under 3GB \$10 back if you stay under 3GB Hotspot None 15GB 30GB Priority Data None 25GB 50GB RedBox Movie Night None 1 free rental per month, for line 2 free rent per month For the Basic Plan As line you'd expect from the title, this is the easiest plan you can get. You get an unlimited number of conversations, text messages and data, as well as a standard definition (480p) streaming and all. There's no hotspot option and you won't get the special RedBox promo that other plans offer, but THE U.S. Cellular Basic costs just \$55 a month for one line. If you add a second line, each one costs \$52.50, the three lines drops to \$38.33, and the four lines cost just \$30 each. Highlights: Lines cost just \$30 The standard definition of streaming included Best for: Users who want to talk, text, and data at a low monthly rate Every day Plan This is your best choice for full access to everyday features. Nothing is outside, even if you don't get as wide access as an even better plan. First, your stream jumps to 720p HD quality and you can enjoy 25GB of priority 4G LTE data. Daily services average \$10 more per month than basic, so one line is \$65, two \$62.50 each, three cost \$48.33, and four lines are just \$40 apiece. The daily plan includes 15GB of hotspot access and this is a good option if you plan to spend time in Canada or Mexico. You will be able to access 500MB of data, as well as 100 minutes of conversation and 100 text messages in any of the North American neighbors. This plan introduces a U.S. cellular payback feature, so you can get an extra \$5 back on your plan if you stay below 3GB of data. Highlights: Conversation, text, and data in Canada and Mexico Payback at \$5 per month according to Data and Access to hot spot Best for: Users who want full access to U.S. Cellular Benefits but don't need a lot of international usage Even Better Plan If you want a plan that has it all, this is one of your choices because it's even better. That is, name, and that's the level of service you get too. The stream shows in 1080p Full HD, make the most of 30GB of access to the hotspot, and enjoy 50GB of high-speed access to LTE data. Of course, this plan kicks the price at \$10 per line, so one line is \$75, two \$72.50, three \$58.33, and four lines will cost \$50 each. Even better the topic continues with dual international access - 1GB of data, 200 minutes of conversation, and 200 texts. If you stay under the 3GB threshold each month, US Cellular will give you a \$10 payback each time. This is the best plan for moviegoers, and thanks to two free RedBox rentals per month, per line. Highlights: Talk, text, and data in Canada and Mexico \$10 per month payback according to 3GB Two free RedBox rentals per line, in month Best for: Users who love RedBox rental, need a little more international access and can save money with Payback Post paid tablets and wearable plans You can connect a tablet or smart watch with U.S. Cellular at a great rate, but only if you have another line of unlimited service. All you have to do is pay for the amount of monthly data you want starting at 1GB for \$10 per month. Doubling your data to 2GB costs just \$5 more and making the leap to 4GB costs \$25. If 4GB isn't quite enough, you can try 10GB for \$40 or unlimited service for \$90 per month. To set up a connected tablet plan, go to the button below or log in to your account. Account.
