Frustration and frustration become constant companions for many people with psoriasis, a chronic skin disease that can be repeated with seemingly no rhyme or cause. The terrible thing about psoriasis is that it's cranky... often he does whatever the hell he wants when he wants to do it. Although life stress is a known trigger, it sometimes breaks out without any damn cause, says dermatologist and clinical psychologist Richard Freed, MD, PhD, Yardley, Pennsylvania. Studies have shown that people living in unpredictable conditions, who cannot be controlled, are angry, depressed and anxious. To help give patients a sense of hope and control over their lives, Fried provides specific tools that combine traditional and complementary medications, including deep breathing exercises, self-speaking, muscle relaxation, hypnosis, yoga, tai chi, and biofeedback training. We find more concrete evidence that the use of mind/body intervention is not only People feel better, but makes their biology respond better, says Fried. For example, in a study of psoriasis patients passing ultraviolet light people who combined the treatment with listening mindfulness of the meditation tape reduced the amount of ultraviolet radiation needed to cleanse psoriasis by 50%. However, one snag in any psoriasis treatment is that it works for one person not necessarily to work for another. For Tony Ann Little, lymphatic massage has helped alleviate both her psoriasis and psoriatic arthritis at several different points in her life. She turned to lymphatic massage not only because she was feeling good, but also because she found solace in having a therapist touch her ulcers and apply lotion. It means everything that someone will touch you as if there is nothing wrong with you, says Little. Human touch, as well as acceptance of the condition, is so important that Fried offers his patients a 15-minute visualization of the audio recording. Using controlled images, they aim to present their hand as sunlight and then touch their psoriasis. Finding what works for you is a genetic autoimmune disease, psoriasis causes the body to send faulty signals to the skin, which then grows every 3 to 5 days rather than the normal 30 days. Unable to shed itself quickly enough, the skin accumulates and becomes inflamed and covered with white flakes, which can cause insane itching. I'm always itchy and I'm more antsy than most people, says Leslie Kronish, first diagnosed at age 10. She deals with the discomfort of her psoriasis in one of two ways. One of them is total denial when I try to forget about it. The other is now so ultra-aware of it that it's very distracting, like pain and itching, and I try to shrug it off as it falls so that it's not on my shoulders and pants,' she says. She also practices deep breathing to contain stress, a technique that helps her find some inner calm. MORE: 7 things your skin is trying to tell you yet ultimately, Kronish feels like she is in a chicken vs egg situation when it comes to managing her psoriasis. I'm not sure if stress and anxiety make it worse, or if the fact it's getting more serious creates stress and anxiety. It's a dilemma that doctors are also trying to figure out. Dermatologists are growing to appreciate the idea that skin conditions like psoriasis are street with two sides: It causes emotional stress, and emotional stress can worsen psoriasis, says Freed, who creates a comprehensive treatment plan to help reduce the patient's stress levels and distress. Tai chi is one of the methods that some use to relieve stress. This gentle martial art soothes the mind and soothes the body. When the mind is quiet, the body will follow, says Troys Tom, who teaches yoga and tai chi at Saddleback College, Mission California Tom, a former master trainer for the Tai Chi Foundation for Arthritis Program-about 10 to 30% of people with psoriasis develop psoriatic arthritis, has, since her 20s, sometimes experienced psoriasis outbreaks. She believes, however, that tai chi, which she has been practicing for more than 14 years, can keep the disease at bay. (Interesting? see how you can get started.) Dietary changes are another way some psoriasis patients try to control the disease. One detailed regimen called the Pagano Diet focuses on six principles: internal cleansing, proper nutrition, herbal teas, cerebrosum adjustments, external ointments, and thinking that focuses on healing psoriasis. Deirdre Earls, who has been a registered dietitian for 5 years, took matters into her own hands by developing her own diet based on macrobiotic cooking, which she now teaches others with psoriasis. In July 2002 my psoriasis got to the point on my palms that I had to pick up a glass with both hands. When I was driving, I had to use my fingertips because I couldn't get around the steering wheel, she says. Suffering from psoriasis from the age of 13, she was required by a new diet to cut out meat, spicy food and alcohol. Any discomfort that Earls has experienced is worth it, she says: Since I've changed, I haven't taken a single prescription medication for my psoriasis, and my skin is cleansed overall throughout my body by 90%.
