You can't access it for another reason If you have another problem, access the help. How to restore a deleted Google account If you've recently deleted your Google account, you can follow steps to restore your account. You still can't access the New Account Create, if you can't access it, try these tips to restore your account. If you still can't restore it, create a new Google account. Avoid account recovery services and passwords for security reasons, you can't ask Google for help over the phone to access your account. We do not work with any service that provides account or password support. Don't reveal your passwords or verification codes. Gmail can be the best safe place to save files, documents, and other items that go into our inbox. If you want to do this quickly go to the official password recovery page and follow the steps shown to you. Before we tell you how to restore your Gmail password, we recommend that you download all these files somewhere in the cloud first, such as iCloud. Back to the topic, in case you forgot your Gmail account password, then you should resort to the Gmail Recovery Service. With pleasure, the Google team will guide you through the process of creating a new key that you can use to retake your email. To do this, Gmail will ask you for an alternative email address that you need while you're creating your account. In case you don't have it, the best option you have is to create a new Gmail account, a process that won't take long. It is not option for those who have important contacts or files in Gmail lost. For this reason, we'll show you the steps you need to recover your password. Go to Gmail homepage. You can do this by typing the Gmail keyword into the browser of your choice. Select the first search result and you will be sent to the service login window. As we aim to recover the password from our account, will we have to click on the Lost Password?. Here are two different options to help you recover your password in Gmail. First, enter the last key that you remember. In case you have no idea what it is, or it doesn't work, choose the second option: Try otherwise. If you choose the second option, Gmail will ask you to send an email to an alternative email account that you used while you were building your account in the service. When you enter it, select the Send option to move on to the next step. Sign up for the email you withered and copy the code that Gmail has undoubtedly sent to it. Enter a new password in two boxes that will appear on the screen. If both passwords are the same, your Gmail inbox will be successfully launched. From now on, you'll be able to log into Gmail with a new password that you've installed. You can also see a way to get into your Gmail inbox or create a free email Gmail.com. If you suddenly can't access your Gmail account from the official Android app, and as a result you can't access your Google account, don't despair. Today here we explain in a few steps how to restore your Gmail account from Android.How can I restore my Gmail account? Before we start, we need to clarify that this tutorial we made is from the Chrome browser on Android. If you want to do the same tutorial with your PC, since it may not have the same result. That's why we recommend doing a tutorial with your own mobile phone to make the process easier. Step 1 The first thing you need to do is open Chrome with your Android device. You can use a different browser, although we recommend using Google.Once you open the browser, you have to enter the following web address: [www.gmail.com](http://www.gmail.com).Step 2 Select the account you want to recover and then click on the option that says Forgotten password? This option appears in blue and is located next to the next button. Step 3A will open a new screen, there you will offer two options. In case you remember any of the passwords you previously used in your account, type it in Yellow is shown on the screen and then click Siguiente.Si you don't remember any previously used password, you can click Try Another way to restore your account using a mobile phone. Step 4 Pressure on either of the two options mentioned above, you will be able to restore your Gmail account from Android.Yes, if you clicked on an option that says try otherwise, you will have to press a button that says yes, as shown in the image we leave you above. The new screen will be displayed where you can put a new password to be able to restore your Gmail account.Since your phone is much easier to recover your account before the end of the tutorial, it is important to clarify that it is always easier to restore your Gmail account, and even a Google account using the phone where that account was used. Google records all the movements made in your email account, Play Store, YouTube and so on. That's why restoring an account from a device where some of these services have been used is the best thing to do. Typically, users of Smatphones (smartphones) resort to the security settings of their devices with the idea of preventing others from accessing it without authorization. Security options range from a password to unlocking a template or using a fingerprint scanner. Forgetting a password or unlocking a template can be a serious inconvenience to many, especially if we use our smartphone to store abundant personal and professional information, as is often the case. However, there are several options for what can be done to solve this oblivion. What options do you have to recover a forgotten password from my mobile phone? Android device manager is available for devices running Android 5.0, 6.0, 7.0 and later. You will need your email address and key access to your Google account and keep your phone turned on and connected to the internet. Once you've organized it all, just follow these simple steps to recover your password. 1. Sign in with an Android device manager from your computer, laptop or device other than your smartphone. 2. Sign up for your Google account. 3. If you have more than one device registered, you will need to choose one that requires the password to be restored or reset by clicking on the name and icon in the top left to the top left to the left of page 4. 5. Enter a new password and confirm. 6. Enter a new password from your smartphone. For devices running Android 4.0 or earlier versions 1. After exceeding the maximum number When you enter your password or pin, you'll see a message on the screen that you find a message that you'll find a message called Forgotten Pattern, Forgotten Contact, or Forgotten Password. 2. Choose an option that applies to you. 3. Enter your username and password of your Google account and follow the steps provided by the system to successfully reset the key, template, or pin. Factory reboot of your device, such as unlocking your found mobile ultimately, if you can't reset your password by following the above steps or if for some reason you don't have data access to your Google account, you can resort to dumping factory data, bearing in mind that it erases all the contents of your device and that if it has an Android version equal or more than 5.0 it may have a security reset you will also be asked for your Google account details after your mobile equipment has been reset. Our Google account is a huge space where the company stores a lot of information about us. Using the data, the locations that Android mobile we use, as well as the passwords that we use on these mobile phones and Google Chrome. Do you want to access them to use them whenever you want? Today we'll find out how to get it. Smart Lock is a tool that allows us to access our mobile phone without entering a password. Is this a security issue? We'll explain. Smart Lock is a feature of Google that saves passwords and syncs between browsers and Android. This feature is extremely useful because it allows us to log in to apps without having to memorize data; We also have access to the log of web pages, so we don't need to memorize usernames or passwords. With this security feature, Smart Lock, our access data is securely stored on Google's servers. There will be those who question your security and privacy, but this is something that works very well and saves a lot of work. In addition, we can access all password registration easily and privately. Restoring passwords stored in your Google account, both from apps and web addresses As we said, Smart Lock is responsible for backing up all passwords of your Android mobile. It's enabled by default, but it's worth sure: Go to Android settings and go to Google menus. Go to Smart Lock for passwords. Make sure smart lock options are checked. Every time you re-log on your Android (and Google Chrome) Smart Lock will be asked to save your data. Conversely, if you're part of an app or website you've used before, you won't need to re-enter don't remember them either. You will be able to choose different passwords without risking losing them. The password management, saving and synchronization system on Android is really good, but how do you access the passwords that Google treasures? Very simple: Click on this link. Drink your Google account. You'll see the entire list of login data saved by Smart Lock. Both Android apps and websites you use in Google Chrome. To see a specific password you only need to click on the eye icon. Ready. You can also remove the login if you no longer use it, just click on the trash can icon. While we recommend not doing this, you never know if you'll ever need it again. As you can see, it's easy to access all the passwords you've saved. This is very useful in case you missed a specific password and should know what it was. Also in case you need to share access to the website, for example. It is advisable to know this little trick and also use Smart Lock on your Android: it will save you from more than one refrain.
