WhatsApp is a popular cross-platform text messaging app that lets you text and talk using only a data plan. The most popular messenger in the world. WhatsApp is arguably the best chat app. Video and voice calls are key components of WhatsApp. This means that you will be able to call people on the contact list who use this app without any charges. The best thing about what makes it so big is its huge global user base. This eliminates the need for a text plan. Encrypted messages that are secure allow you to have a secure chat or group chat. Group messages and these are professional tools allow you to interact with a lot of people easily. A voice call. Supports media attachments. Note: People you want to communicate with should have this app installed and running an Internet connection. You can create a group and add as many people as you want. The media common in the group will be visible to all members of the group. Another interesting feature is that it has a built-in image compressor, with which the image will automatically compress to make image sharing easier. You can also join groups created by other people if you are asked to join. Privacy management with Whatsapp WhatsApp has added some recent privacy settings, such as fingerprint blocking for its Android app. This security is only enabled on devices with sensors and running Android version 6.0 or higher. To set this up go to the privacy account and scroll down. At the bottom you will find a lock option. Once turned on, you can set a timer to prompt the lock. Users can still answer calls without unlocking and can turn on or off preview text and messages inside the notification bar. All this and more information you can find on WhatsApp Privacy. Other important updates include controls such as who can add you to groups. Instead of letting everyone add you to the group, you can set it up for my contacts or exclude certain contacts from adding you. This saying if you have expelled someone they can still send you a private invitation to a group that you can accept or reject. Finally, the call-waiting feature for WhatsApp is here. This will allow users to see who is calling them even when they call. Just like your standard phone call users can receive or reject an incoming call during another call. WhatsApp File Information Last Updated: September 21, 2020 Developer: WhatsApp Inc. Version: 2.20.199.14 (204914001) Requirement: Android 4.0.3 and up file size: 29.7 MB Downloaded: September 21, 2020 10:21 GMT-07 MDS: c00963b7fd604296fa2e7fd9607e326 SHA1: e089a37266 f70e94aca2b0084b15dadb0516baf Available in Google Play: Set from Google Play review of WhatsApp app In general, WhatsApp for Android allows you not only to send text messages in the chat window but also make video and voice calls for free. All messages exchanged through this app, including files, voice, images, are protected by text encryption. The same encryption protocol is also used by Signal. In addition to this, there is also a video call feature that allows you to connect to another WA user, either during a chat or from the call screen. Despite this, the group video call feature is not yet available. At the same time, to communicate with other users, you can communicate simply one-on-one or with that you've created and administered. Each group chat can consist of 256 members in total, tops. When you're in contact or in a group, you can send not only texts, but also emoticons. In addition, the chat also allows you to create voice messages that you've recorded before, share documents, send your location, and even capture and and Photos. The conversation is also free, especially since the developer lowered the annual subscription fee last year. And while the services are free, WA doesn't run any third-party ads that will free you from any pesky pop-up ads. Unlike Facebook Messenger and most mobile messaging services that require an account, Whatsapp does not offer an account to create as a sign-up. All you have to do is just typing the phone number that Whatsapp will check with a text message. Later, this platform offers to scour your address book for other users' phone number. Automatically Whatsapp adds to friends. There are so many benefits that you can enjoy from using this app as a messaging service on an Android device. Even so, this app isn't perfect either, since there are also some things that are missing from this app. Pros Use broadcast lists to send messages to multiple contacts at once, which will save you a lot of time when you send a greeting or the volume of the invitation. You can share your location with any contact you want. Text messages are not the only service offered, but also video and audio calls. You no longer need to use headphones when there is an audio message inbox, even if you are in a public area. Just bring your Android smartphone close to your ear as the message plays out. This will reduce the volume of the sound and you can listen to the message as if you are on a call. All-to-end encryption will provide all your conversations, meaning that no one has any access to it or can even read it, including WhatsApp except you and the one you communicate with. All the services this app offers are free. You can watch any important messages so as not to lose them. To find star messages, you can access a separate section. The latest version now has Stories to replace the old status feature. It's like a Snapchat and Instagram story. It feels stable, fast and easy while using. Cons Even though it now has a History feature, it still hasn't made any facial filter feature available yet, unlike Snapchat. Facebook or Instagram. It lacks built-in virtual help, such as Google Allow. There is a limit to the size of the file sent through this app; The video can not be more than 16MB and the documents should be less than 100MB. This reduces the quality of the image. To contact someone, you need to know and keep their phone number first. How to use the How tutorial Dark WhatsApp mode to activate the dark WA mode, you can go to the Settings of the Chats of the Topics. Choose Dark and then click OK. How to activate WhatsApp's fingerprint function To activate WA fingerprints you can go to the Settings of the account's privacy zgt; fingerprints and then turn on Unlock with your fingerprint. How to make a call using WhatsApp Open chat with You would like to call and press the phone button located on top. To get a call, click, and then slide the green button that appears on the incoming call screen to answer it, or slide the red button if you want to reject the call. To reject a call with a quick message, click on the message icon that appears on the call screen. How to make a video call in WhatsApp If you want to post a video call, the move is similar to when you make a voice call. However, click the video call instead. And to get a video call, there's an incoming video call screen too. To accept or reject a video call, the steps are also similar when you answer or reject a voice call. How to back up WhatsApp's Google Drive app allows you to back up WA data using local backup and/or Google Drive. Local backups are created automatically at 2 a.m. every day and stored as a file on the device. To back up your data on Google Drive, just open the app and then open the Menu button. Go to Settings - Chats - Chat Backup. Then click the Back button for immediate backup, as well as on the Back to Google Drive option to adjust the backup frequency. Make sure you have a Google account. The Reserve Backup option allows you to determine which network is being used for backup treatment. How to change wallpapers Change wallpaper is also possible. Even so, you can set different photos for the conversation. Click on the Menu button and go to the Settings - Chats - Wallpaper button. To block a contact already stored on your device, click the Menu button and go to the Settings button - Account - Privacy - Blocked Contacts. Open the sign to add contact and choose which contact you want to block. If the contact is not stored on your phone, just open a chat with that unknown contact and click Block. While it is true that WhatsApp is not perfect, but it offered so many great benefits that made communication much easier, easier and more convenient. ChangeLog Group now encourages you to maintain picture-in-picture mode to facilitate multitasking. The attachment menu has been updated to include updated icons and add back the camera label.
