MTR VACUUM PLANTERS MTR landing unit, the final solution for landing in each soil and seasonal conditionsMTR VACUUM PLANTERS RANGE MTR range MTR unit model was designed to guarantee maximum power and working speed. The strength of the frame and the variety of configurations make this landing unit adaptable to all kinds of working conditions. The pneumatic seed distribution system guarantees extremely homogeneous delivery, even seeding with uneven shape and size. The contents of the •• MTR vacuum planters range 2 •• Vechs 4 •• Landing Unit 6 •• Options and features 8 •• Landing consistency of 10 •• Precision and Esperion 12 •• Seeds, Covering 14 •• Nutrients available 16 •• Equestrian - Fix frame 18 •• - Telescopic 20 •• Equestrian - Folding Frame 22 •• Equestrian - Vario Interval 24 •• Trailed - Fix Frame 26 •• Trailed - Folding Frame •• Monitors 28 34 TRAILED VARIO SPACING MODEL MONICA MAGMILESTONES C 1834 Gaspardo designs and implements, following only one goal: to meet the needs of professionals from all over the world. Currently, seeding technology has affected production, leading to machines that can sow without overtaking, or reduce it to a minimum; the number of rows processed has increased depending on the increased capacity of tractors. The company is able to issue monuments to 48 rows in accordance with the requirements of the largest grain farms in the world.2013 BALENA 2014 TRONIC Tines Seed Driller 2007 DAMA Electronic High Precision Planter First Combined Seed Drill on roller 2010 MAXIMETRO 2005 METRO First European 48 rank-and-file Vacuum high-precision planter 2006 REGINA 1994 No-to-precision planter 1996 COMBINATA Combined drill seeds 100% MASCHIO GASPARDO 1990 MT 600 First dual disk vacuum planter 1986 LEONARD 90 First non-vacuum planter 5PLANTING UNIT STRONG FOR BREAKING! Arm Strong This landing unit is designed for sowing in uneven conditions and at high working speeds. The parallel hand of communication consists of one high tense steel cast piece. This design prevents twisting and bending during loads and impacts that can occur in the most difficult working conditions. The unit down-pressure adjustable spring allows you to set the pressure down compared to the condition of the soil. Adjust it to set the correct downforce from 115kg to 140kg. High working range No maintenance 60 litre bunker capacity Self Grease Precision Precision Prevent doubles with fine adjustment doubles straightener Match soil condition condition Spring lets you manage down the pressure of Universal Universal Seed plate fast and easily thin depth control Continuous adjustment from 1 to 12 cm Without maintenance Even the placement of seed shaft dust proof and durable long Walking gauge wheels Thin adjustments of the front blade and lump pusher can be iOPTIONS AND FEATURES CUSTOMIZE YOUR PLANTER TO MATCH PLANTING CONDITIONS! Different front attachments are available to ensure ideal planting in different soil conditions. Clods Pusher Adjustable Comical Pusher moves dry soil and lumps from sowing slot, the front-mounted independent coulter can shorten the soil for prime furrow opening on slouched soil conditions. The front disk The front coulter disk unit cuts into difficult soil in reduced to conditions. LONG-TERM PERFORMANCE WITH LOW MAINTENANCE! Save money and reduce maintenance time. Cardan Shaft Drive Forget chains, lubricant and dusty wear. No fear when working on high residues, stems can not damage it. The sealing bushes are baked by the bushes, release oil particles that grease the hinge and service for free. Super Scraper Scraper has a wear-resistant tungsten carbide profile for NO-STOP work. PLANTING CONSISTENCY DEPTH CONTROL Set a landing depth of 1 to 12 cm thanks to two wide-gauge wheels with an alignment system to control the depth of the seeding by counteracting the left and right wheels. Even the depth control of the crops is guaranteed in rough soil conditions. Gauge wheels consolidate the soil immediately after the furrow is opened. Most of the downward pressure is given on the side while the upper soil is closer to the furrow just gently ducked in front of the rear wheels closing. Walking gauge wheels Due to the greatest diameter double disc walking gauge wheels action is also guaranteed landing at a high depth (e.g.: 8 cm in dry soils). ACCURACY AND EXPERIENCE ACCURACY PLANTERS Precision Vacuum System gently pulls and individually holds the seeds in flat seed plate holes, regardless of the shape and size inconsistency. The seed singulator Double seed singulator action can be checked from the back of the inspection door and it can be very quickly and easily adjusted. Singulation is carried out on the inside and the outside of the holes avoiding thus doubling. The excellent accuracy of Gaspardo improves your output by significantly reducing the winnings. Sowing errors are avoided, and even distance guarantees better performance. ... A story that lasts a long time. My family has owned nine GASPARDO planters over the years. The latest MANTA stroke me the most for the great opportunity of opening furrows and precision seed delivery. I like the folding frame and its flexibility to follow each circuit. SEED COVERING PERFECT SEED COVERING AND OPTIMAL SEED TO SOIL CONTACT CLOSING WHEELS Wheel Staggered Wheels Rubber Tire 2 Rubber Tire 1 Cam Adjustment Closing rear press wheels with airtight bearings and bolt through the design. Standard 2 rubber rubber rubber rubber rubber wheels suitable for

conventionally charred and loose soil. Soft rubber prevents the soil from sticking in wet conditions. 14 Adjustable wheels to optimize the closing of the furrow. NUTRIENTS ARE AVAILABLE LOCALIZED FERTILIZER: NO WASTE! The distribution of fertilizers in a row reduces and increases its efficiency. Thanks to the tank's large capacity and flexible accounting system, the thin calibration of granular fertilizers is easy to achieve. The fan blows a stream of air that takes granular fertilizer to distribute the head and eventually into the rows. The granular fertiliser is evenly distributed into furrows that are opened by a double disk coulters. The coulters double disk Depending on the planter version and crop requirements, the fertilizer can be distributed using a Suffolk knife, a double-disc knife or pneumatic distribution directly into the seeding furrow. MTR - MARINA HARD FRAMES, RELIABLE AND RELIABLE. MTR - Narrow frame to be close to the tractor - Narrow transmission system allows you to set the interval from 90 cm to 45 cm. MARINA - Heavy duty in the square of the toolbar, double frame - Contact gearbox drive and gearbox levers (32 transmissions) - Ferty system - fertiliser auger distributor - Adjustable transmission wheels for installation on the ridges gearbox gearbox with two levers. No need to change the position of the chain and/or sprocket wheels. MTR Contact Wheel Drive This system guarantees a uniformity of the wheel drive this system is carried out by mouth shafts instead of conventional chains (no need for maintenance, no remnants of stem stuck between chains and sprocket wheels). MARTA - MTE RIGID AND RUGGED WHILE WORKING, NARROW AND SAFE ON TRANSPORT MARTA - Narrow transport width 2.55 m or 3 m . Ideal for sunken conditions - 850 litre stainless steel bunker or BB bunker 1000 l MTE - Narrow transport width 3 m or 3.2 m. Rear transmission wheels of large diameter - BB bunker 1000 l All-in-One These models can be connected back to CONTE for soil sorting and landing in one Pass.3 m transport MTE-R BB width 21MANTA - MANTA XL - MIRKA THE FOLDING FRAME FOLLOWS EVERY COUNTOUR MANTA - Front or rear transmission wheels - Wings to the system to facilitate maneuvers - Suffolk or double disc fertilizer coulters - Transport width is available 2.55 and 3.00 m MANTA XL - Telescopic wings, To reduce the width of the transport to 3.MIRKA MANTA Three sections of the frame and gearbox independent sections of the frame allows you to follow each circuit. Three geraboxes keep an even distance also when landing at round corners of the field. MONICA - MAGICA - MAGA VARIO SPACING, ONE MACHINE MATCH ALL CROPS MONICA - Telescopic frame with a narrow transport 2.50 m . MAGICA's Fast Fertilizer Set - Telescopic frame with transport 3.00 and 3.MONICA Gearbox Gearbox Gearbox with two levers is extremely user-friendly. No need to change the position of the chain and/or sprocket wheels. ROMINE'S RUGGED FRAME IS JUST A HEAVY DEBT. ROMINA - Heavy Duty square dual frame toolkit - Contact gearbox drive and gearbox levers (32 gear ratios) - Ferty system - fertiliser auger distributor - Two turning points Trail hard frame Great maneuverability thanks to 2 point-turning hitches and hydraulic lifting wheels. A draw can be folded dramatically by reducing the required storage space, and allowing easy transport between fields. ROMINA Ferty Fertilizer System Lamb Distributor Featuring the distributor's open sheep coil, fertilizer delivery is extremely accurate even at incompatible fertiliser grain sizes. MARISA RIGID AND RUGGED WHILE WORKING, SAFE AND EASY TO TRANSPORT MARISA The MARISA Heavy Frame IS ideal for planting in every state of the soil. Contact wheel drive and feature lever gearbox that make activities easy and safe. The large 1600-litre fertilizer bunker has pneumatic delivery for side rows and the rapid adjustment of the set makes the calibration quick and easy. The hydraulic folding frame, which is easy to transport, reduces the width of the transport to 3 m. MARISA 29METRO TWO IS BETTER THAN ONE METRO Match Two fixes 8 rows by 70 cm or 12 rows at 45 cm interval and performance improvement. The large power of the fertilizer and seed bunker allows you to plant with a high working range. These two sections are independent and can swim during operations. Reduce the width of the transport by folding two sections forward. Ideal for following the terrestrial contours of the METRO Extended Application Tool Bar can be matched with two 6m seed MEGA drills for sowing cereal and grass. The three-point connection guarantees a fast and light switch. MAXIMETRO WIDE AND FLEXIBLE MAXIMETRO MaximEtro Model was designed to provide maximum capacity and speed. It is remarkably efficient, able to plant thousands of hectares in a short period of time, offering all the economic and organizational benefits associated with using a single machine. The strength of the frame and the variety of configurations make this planter adaptable to all kinds of working conditions. MAXIMETRO 33MONITOR UNDER MULLER CONTROL Muller ISOBUS is the standard corona and saves costs, reduces customization time and makes things easier. This is a prerequisite for functional documentation of the work and for precision farming. V1200 V1200 to 12 rows - Seed control on a line with alarm - SERIO hectare counter - Seed control on a row with - Partial and general work zone (ha) - Working speed (km/h) - Sowing distance (see) of all rows middle or each row - Planting density (n) per sqm) sq.m) Serial connection of sensors and SD memory cards for storing work data - Backlight graphic display 5.09-13 Cod.
