The Sanggat app is useful for Andromax users to create CDMA for the GSM GSM network and can be useful for other Android phones. This app is useful for those of you who want to switch networks, for example, from 2G to 3G, 3G to LTE and so on, that you can do easily without fuss and your phone already supports the connection to be selected. For example, friends want to change the network from EDGE to 3G, then a friend's phone already has to maintain a 3G/HSDPA connection. Download LTE On Off Android app 2015 In addition, a buddy can also do the opposite, namely switch the network from high to low, say, with a 3G network switch on EDGE/2G. LTE On Off on Smartfren Mobile Andromax C LTE On Off in Smartfren Phone Andromax C Screenshot above, taken using Smartfren Andromax C. For example, the image above from EVDO we can choose how we want, for example, I changed to GSM only, then it will automatically switch to GSM mode (EDGE/2G network) because on Smartfren phones that can not be made SMS and phone when on the NETWORK EVDO, because if in EVDO mode can only be done By Internetan. LTE On Off's Smartfren Phones Andromax C LTE On Off in Andromax C Smartfren phones and in global options, means that the network will choose globally or globally to customize the simcard network (Simcard) on a used phone. This can also be done to overcome the RUIIM disabled for the andromax phones series. Well, for those of you who want to try it out on another Android phone, you might as well do it. Just a friend download the LTE On Off app below. Link 1 4shared - download link 2 Mediafire - download Sekian on this post, hopefully it can be useful. Featuring : UlinNews Made for HTC Thunderbolt on Verizon. Not working with the LG revolution, no Samsung charge yet, these phones will in the future. NOT FOR CYANOGENMOD or OTHER AOSP BASED ROMS Like all paid LTE Switch and Toggles, just faster, smaller and free. It's just, to the point. A simple shortcut for preferred network settings, where you can change from 3g to 4g. If you don't #39 like devs who actually update their apps, don't #39;t install this one. This app doesn't have a widget yet and doesn't #39.t claim. There is currently no other way to turn off 4g, I #39;t make it more user-friendly. HTC and Google are to blame. A paid version called LTE Settings from Cuning Logic, but it's the same as this app (Don #39;t buy it expecting extras just yet). Hey hey, look open source #39!
