I bought it for a cold bathroom to warm it up, which is a nice heater that works great. LikesFor Heat AparaanceFor bathroomNoise levelRoomHelpful? March 3, 2020Impressive quality at the price. Built-in timer and temperature sensor. I used this heater exclusively this winter to heat the studio apartment and the electricity bill is about \$20 less than last year. This heater paid off in 2 months. Helpful? January 30, 2020This heater is really cool! I like the fact that it has a thermostat and keeps my office temperature the way I want! It's big enough for my small office space, and it's definitely powerful! I am very happy with this purchase and I recommend it! Helpful? January 18th 2020Best the smallest heater I've ever had. I use 2 of them in my small 1 BR apt and they keep me nice and cozy. My APT has an electric wall block provides almost no heat to the BR through its opening. These guys are doing their job. It's 21 degrees outside with the wind. I'm on the north side of the good. My electricity bill was actually 7.00 cheaper than last year at this time and I wasn't warm and cozy. Also, they don't take moisture out of the air and I breathe easier and stay warmer because of it. They are safe and auto cars really works. The timer is also convenient. I highly recommend these little heaters. Helpful? March 1, 2018lt was great at first. Now it turns off and shows E1 on the screen. The manual doesn't mention E1. Helpful? February 9, 2020Y bought 2. will it only keep you warm, if you poured gas on it, then set it on fire. December 20, 2017Y bought this product in November 2017. Thought it would be nice to heat the office above the garage to work during the day. It was suspicious from the start. I thought I had a misunderstanding of the manual because the timer step did not show as shown in the guide. I'd turn it on and the default temperature is 72 degrees, but it would still overheat the room without ever turning off. When I adjust the thermostat, it's off, period. I was trying to learn. It is now switched on for 3-5 minutes and then shuts down. The light just flashes, but the guide says nothing about flashing light or what it might mean. I went to the comfortzone-us site to find out and typed in this model cz2017wm ... he says no results have been found. I'm bringing him back. What a waste. I would not recommend this product or any other comfort zone products as they do not recognize the production of their own products. Helpful? March 27, 2018Y bought this heater hoping it would save money while it goes away and doesn't come back on if I turn it off. I keep getting the E-1 code, but the guide doesn't have any codes in it to tell me what that means. Also on the website of the comfort zone says that there are no results for this product. I'm sad, it wasn't cheap! Helpful? December 21, 2017 Digital read not even close to room temperature I have to set it at 50 degrees. December 19, 2017 two weeks, and now it just turns itself off, so in the middle of the night you freeze Herpful?
