Mel Frank PDF, or Portable Document Format, is a technology developed by Adobe Systems. It's a universal program used to open and view almost any document - it doesn't matter if your PC or Mac. This makes the PDF document ideal for use when emailing documents, or publishing documents online for viewers to read and print. Printing a document in black and white is simple, which requires an easy change of printer settings. Open the PDF you want to print. Click on the File option from the toolbar at the top of the page and then select Print. Click the Preference button from the gray box that appears on the screen. Choose the Color tab at the top of the grey window. Select the Grayscale Print option and, if applicable, select Use a black ink cartridge. Click OK at the bottom of the gray box to take the settings. Click the Print button and the document will be printed in black and white. Reader RJT Has assembled this monochrome home screen with a focus on simplicity and the elimination of distractions. Here's how to set it up. Tools used to create the screen above: RJT comments on how it uses it: I use one home screen as I find clutter annoying, and it's easy to make access to all your apps wind up without cluttering your desktop. I hate widgets, so I haven't used any. For the basic wallpaper, all that was done was a simple gradient layer in Photoshop duplicated with the texture of the overlay, and the text added on top. An easy way to make sure you're creating wallpaper that matches your home screen grid layout is to simply snap a screenshot of your phone while the developer options for the show's layout of the borders are enabled. It will also provide you with a simple template if you want to change the background in the future. The notification panel simply monitors the power of users (baked in ROM/theme), which is also responsible for inverted apps. You can see more screenshots from this theme here. Do you have an awesome, tweaked-in-oblivion home or a lock screen of your own that you would like to share? Go ahead and place it on the #homescreenshowcase describing how you did it and this may be the next featured home screen. Have you been challenged? If you're a woman with an Instagram account in the year of our Lord 2020, then there's a good chance you've been - or will soon be. Its beginning is ambiguous, but the basic premise of the call is that a woman sends you a message that you are beautiful and amazing. And, thank you, you know. But, there's more: They're also asking you to post a black and white photo of yourself, all as part of a larger effort to support women. If you decide to do this, you can post a photo, write some variations of the phrase call taken under it, and then send a version of the same message to more women. So you've completed your participation in The Challenge, which comes out under different names, including #WomenSupportingWomen and #ChallengeAccepted. Although the exact origin of this trend and its subsequent popularity is a grey area - some say that this is a response to the Republic of Alexandria Okasio-Cortez's viral speech against sexist remarks put forward by her Rep. Ted Yoho, others, like travel reporter Tariro Mzezewa, have tied him to women in Turkey speaking out against domestic violence - one aspect of the problem is very black and white: In a world with such ambiguity, it's worth asking why this harsh, vintage aesthetic has been adopted as a means of spreading modern possibilities. The current use of black and white photography goes beyond The Challenge - indeed, some have noticed a link between his appearance and Taylor Swift's aesthetic in the much talked-about new album, Folklore. But, the history of black and white photography obviously goes much further back. As long as there was color photography, opting for the use of black and white instead of informed introspective seriousness, a kind of clarity of moral and artistic intent - it recalls Ansel Adams's majestic landscapes, Robert Mapplethorpe's border-breaking portraits, and Dorothea Lange's humanizing images of American poverty. There's an idea that there's something more true about black and white, says David Company, managing director of programs at the International Center for Photography in New York. On a technical level, it's actually less true because it's less realistic, it has less information about But on top of that, we have all sorts of metaphors about black and white: if you ask someone to give you the truth without embellishment, you'll say, Give me black and white. So we have an idea that facts are black and white, and color is some kind of wild, luxurious distraction. What I don't think is true at all. This Taylor Swift, the pop star clearly trying to get some indie credo with folklore that even has a cameo by Bon Iver, busy with black and white photos to accompany it, makes sense. The images, taken by photographer Beth Garrabrandt, are a departure from Swift's sweet, ultra-manicure past, especially her latest release, 2019's Lover, whose cover featured pink shiny inscriptions and an image of her standing in front of a sky-colored cotton candy. (The reputation of 2017 also had a black-and-white cover, liberally used lower-register inscriptions and, like folklore, was considered more severe in tone than some of its previous releases.) But the notion that simply making an image black and white can infuse it with an inherent sense of import has also become something of a cliché, especially when using amateur Instagram shutterbugs. It's kind of the equivalent of saying your favorite movie Breakfast at Tiffany's or that you want to live in Paris one day - maybe these things are true, but it's just as likely they said it because someone thinks they should be true, making them feel faux-complex, and ultimately means something other than what they're meant to mind. Kind of like the Challenge itself. And also, kind of like social media in general - particularly Instagram. Instagram has fundamentally changed the way we document our lives, and especially the way we document ourselves, with selfies perhaps the biggest contribution of the platform to society. Once upon a time, personal photography was, well, personal, and almost certainly wasn't intended to be shared with a potentially infinite number of strangers. Now, every self-portrait made is intended for public consumption, and selfies are the most common photos posted. Thus, scrolling through most people's channels features mostly images of them, alone, usually trying to look vaguely sexy without seeming like they are trying too hard. The ubiquity of these selfies, however, has taken a hit recently when, after months of posting images of quarantine-inspired sourdough bread and banana bread, people began using their channels to promote social justice causes. It would be easy to think that this would mean the death of a selfie, but the environment proved much more resilient. So now, thanks to the growth of Instagram's rollout for the architect and the maintenance of critical social justice movements, it makes sense that selfies will evolve and adopt a new aesthetic; Now they're in grayscale, and

in with a message message however, the weak connection with this message is actually. This evolution shows how many of us suddenly need to feel like everything we do is contribute to broader discourse - or at least seem to be. The reality, of course, is more complex, and certainly shouldn't ignore the fact that what some people really want is the rush of endorphins that come from viewing likes and comments to roll in. I think people, especially those shooting bodies, are very knowledgeable that in a very hyper-sexual culture, black and white removes the image from the kind of obvious body commodification and commercialization of sexuality, says Company. There's no explicit recognition that this was part of the thinking behind the many black and white images currently flooding our Instagram feeds, but on a subconscious level, it makes sense that some women may feel more empowered by black and white photos of themselves than in color. While the challenge is probably pretty much harmless - and complaining about it too much feels kind of elitist - the big concern here is that if everything posted on social media should be a movement, then nothing is really a movement, and that threatens to flip the legitimacy of things that really need to be addressed. This is also not the first time a black and white color palette has been used to place a veil of seriousness on a platform that has historically been anything but. As Taylor Lorenz notes in a New York Times article about The Challenge, in 2016 there was a black-and-white #ChallengeAccepted around cancer awareness. This kind of vague hashtag activism also recalls a big black square debacle a few months ago in which a bunch of people placed black squares next to #blacklivesmatter in supposed solidarity with the movement, only to drown out important information about nationwide protests by flooding channels and matching hashtags with, basically, nothing. The black square then became something of a symbol for the perfection awakened, and now basically the punch line is aligned against white people who do too much without doing anything at all. Similarly, within a few days, it's likely we'll all move on from these selfies and the strangely worded, spam mail-adjointing DMs that accompanied them. Or perhaps all of this will soon be co-opted by brands, thereby depriving it of any meaning it could ever have. On the other hand, what may linger is appreciation for the black and white, color palette that feels almost too on the nose is perfect for a moment a time when so many shortcomings of our society have been thrown into sharp relief, even if all that has been revealed is how much of our world still remains a gray area.
