Avast Cleanup for Android is a mobile app designed to improve device performance and store storage space by removing unnecessary media, files, apps, and application data. Remove these items by transferring them to a cloud storage account and/or removing them from your device. You can also optimize photos so they consume less space. This article suggests that the latest version of Avast Cleanup is installed and ready for use on your Android device. For detailed instructions on installing the app and performing the initial setting, refer to the following article: Install Avast Cleaning on Android Navigate the Avast Cleaning Interface Avast Click App Cleaning on the device's home screen to open the app. The main screen consists of a Fast Clean button, four tiles representing the main options, and ☰ menu (three lines). These options allow you to perform the steps listed below: Fast Clean: Allows you to delete unnecessary files to make room for storage. Avast Cleanup Pro users can additionally enable automatic cleaning, which performs regular quick cleanings automatically without manually activating them. Increase your memory: Lets apps sleep to free up memory and improve performance. Tips: Tips for freeing space on your device. Media: Provides an overview of the media stored on your device (including photos, videos and audio). You can further optimize photos by reducing pixel size so they consume less space. This feature also displays media that you can remove to create additional storage space on your device. Apps: Tips related to applications, such as non-installation of never-used or rarely used apps, or apps that take up a large number of From the app's main screen, you can also click on the menu ☰ (three lines) in the top left corner to easily access apps, files, and media on your device, as well as manage connected cloud services and customize app settings. Perform a quick clean cleansing device by removing unnecessary files to make room for storage. You can choose which types of items are removed before cleaning. Click the Fast Clean button. In a quick clean check, tick the item types you want to clean. Types of items are divided into two sections (you can see one or both sections, depending on what types of data are stored on your device): Safe to clean: data that has been carefully selected to make sure it is truly optional, including sketches, APKS, residual files, and hidden, visible and shared cache. All categories are marked by default as Secure for Cleaning, with the exception of Thumbnails.For your consideration: data that may or may not be valuable to you. We recommend looking at the items included in this group and ticking only those items that you can do. All items are not used by default and will not be removed unless you manually select them to be removed. Click Finish the cleanup to clean the selected items. Boost Memory stops apps from running in the background, freeing up memory for other tasks. Click on the Boost Memory tile. Mark the apps you want to stop and then click Hibernate Apps (or Kill apps if Avast Cleanup doesn't yet have permission to sleep apps). You must allow Avast Cleanup to sleep through device settings. You are asked to provide Avast Cleanup with this permission at the time of the initial setting. If you missed the original setup, click Kill Apps, select Grant's resolution from the results screen, and then follow the instructions on the screen to allow Avast Cleanup to sleep the apps. Click on the back arrow to get back to the app's main screen. Managing files and media stored on your device, The Media allows you to easily view and control the videos, images, and audio stored on your device. Click on the Multimedia tile. The following options are available on the Media Overview screen: Chart review: Shows the percentage of storage of devices occupied by video, pictures and audio. Click the category to view and control individual items. Photo Analysis: It's easy to delete unwanted photos from your device by deleting images or sending them to cloud storage. Click the category to view and control individual items. Especially large categories are marked in red. Optimized: Identifies optimized images Device. Optimized images can be in size to take up less space without noticeable quality differences. Click on the image to view and control individual items. Folders: Provides an overview of folders on your device. The folders are in order of size, and especially large folders are marked in red. Click any folder to view and manage its contents, or click Show all to access access Folder. Big videos: Identifies any videos larger than 20MB stored on your device and allows you to delete them for release. Click on the image to view and control individual items. Optimizing Avast Cleanup photos allows you to optimize images to take up less space. Images that are already the same size as the device screen (such as screenshots) are not optimized. To optimize: Click on the Media tile on the app's home screen. Scroll down and tap the optimized panel. By default, all optimized images are selected. Additionally, click Deselect All and manually select images to optimize. Then click the Optimization button at the bottom of the screen. Select delete originals to permanently remove the original images from the device. Also, send the originals to the cloud storage using the option below: account name: If you're already connected to one or more cloud storage accounts, tap the name of the connected cloud storage. The optimization starts immediately, and the original images are sent to a connected cloud storage account. Cloud Connection: This option appears if Avast Cleanup isn't yet connected to any cloud storage accounts, click Connect to cloud storage to open the cloud service screen where you can connect to your cloud storage account. When the optimization is complete, click on the back to return to the main screen of the app. Remove unwanted photos from your device In addition to optimizing photos, Avast Cleanup will also help you make room for storage, identify images that you can remove from your device. Click on the Multimedia tile on the app's home screen. Scroll down to the photo analysis. Click the photo category to view its contents: Similar photos: Scan for groups of similar photos and notes the best quality photos in each group. Bad photos: Scan for photos that are blurry, dark or of poor quality. Sensitive Photos: Scan images sent or obtained through social apps that may be confidential or confidential. Old photos: Scan old, potentially unwanted photos. All photos are not selected by default. Click Select All, or tick the image individually to remove. Choose the appropriate option: Similar photos and bad photos: Select Delete Photos to permanently remove selected photos from your device. Sensitive photos and old photos: Tap the icon (three dots) and choose one of the following options: Size optimization: the size of the selected photos to make them less space on your device. You can either delete the original images or send the original images to the cloud. If Avast Cleanup isn't yet connected to any cloud storage accounts, click Connect on cloud storage to open the cloud service screen, and then sign up for a cloud storage account. Moving to the cloud: Sends selected photos to a connected cloud storage account. If you're connected to more than one cloud storage account, you're first asked to select an account. Record. manage connected accounts through the cloud service screen. Cloud Connection: If Avast Cleanup isn't yet connected to any cloud storage accounts, click Connect to Cloud to open the cloud screen, and then sign up for a cloud storage account to send selected photos to your cloud storage account. Delete from your device: Permanently delete selected photos from your device. Click on the back arrow to clear the additional group photo. You can also control photos stored on your device, ☰ menu (three lines) ► Pictures. App Analysis and Management Apps analyzes installed applications and provides data on data usage and size. The feature further analyzes how often you use apps and allows you to immediately release memory in sleeping apps that run in the background. Click on the Apps tile on the app's home screen to view the following data: Chart review: Select a tile to manage apps or app data: Installed: Apps you've installed that aren't necessary for your device to work. You can delete installed apps. System: The apps you need to run. Apps can be dormant, but not removed from your device. Application data: View and delete app data stored on your device. Storage: View usage and storage data individually for each app installed on your device. Drainage Systems: Identify apps that can drain your data and battery. Select a category to view and manage individual applications. Apps are divided into categories: Data: Displays apps that use a large amount of mobile data. Storage: Displays the apps that take up the most space on your device. Battery: displays apps that drain the battery. Use: Displays apps based on frequency of use. You can view the least used, most used and unused apps. Once you've selected a category, you can specify the length of time tabs are used at the top of the screen (for example, the least used apps in the last 7 days). Running: Shows the number of apps currently running in the background. Tap Fast Boost immediately into the sleep mode of active apps and release the memory. Height: Click on this panel to view apps that take up more space on your device than before. Apps are displayed in order of size. Notice: Click on this panel to see the list of notification apps. Apps are displayed in order by number sent in the last 7 days. To manage installed applications, click on the category above (such as Growing). Choose one or more apps, and then tap the three-point icon in the bottom right corner. Choose your preferred option: Remove from your device: remove your chosen app (s). Hibernate: immediately stops the selected app (s) running in the background and releases the memory. Click on the back arrow to return to the App Review screen. Tips for Optimizing Device Feature Tips analyzes the device and displays the choice of choice savings tips. You can set up Settings Analysis to ensure that the space saving tips that are most relevant to you will appear first. Click Tips from the app's main screen. If you're using this feature for the first time, click Tune to customize your analysis preferences. Also, click Skip to use the default settings and immediately go to see the tips for saving space. You can customize your analysis settings at any time with your app settings. From the Analysis Preference screen, click and hold the ☰ icon (three lines) next to the category, then drag the category up or down. The category at the top of the list has the highest priority, while the category at the bottom has the lowest priority. When you've set up your chosen analysis preferences, tap the back arrow to see individual space saving tips. Swipe left to see follow-up tips. Click ⋮ (three points) next to the TIP number and either click Set up tips to open the Preference Analysis screen, or click show this tip less frequently if you no longer want to see the relevant tips. Cloud control refers to virtual storage space where media and files such as photos, videos, and documents can be stored. Avast Cleanup makes it easy to transfer items from your device to a connected cloud storage account. You can connect to your cloud storage account through the cloud service screen. This screen is available using any method below: Open Avast Cleanup and go ☰ menu (three lines) ► Settings ► cloud services. Click the Connect to Cloud option that appears when managing files or media on your device while Avast Cleanup is not yet connected to any cloud storage accounts. To connect to your cloud storage account from the cloud service screen: Tap Connect next to your chosen cloud service (Dropbox or Google Drive). Choose your preferred account and click OK. Enter your login credentials if asked. The account is now displayed on Connected cloud services. To log out of your account, tap the ⋮ icon (three points) next to your account and select Sign Out. You can be connected to multiple Google Drive accounts and one Dropbox account at a time. If you're connected to multiple accounts at the same time, you're asked to choose an account every time you try to transfer data to cloud storage. Install automatic cleaning (Avast Cleanup Pro only) Auto-cleaning feature (available in paid versions of Avast Cleanup) allows you to schedule automatic cleaning of the device: Tap Fast Clean on the app's home screen. Automatic clean and then press the slider off so it turns to turn on this feature. Set how regularly Avast Cleanup performs the scan, and the minimum amount of space you want to clean. You can also specify if you receive a notification of each cleaning by clicking the slider next to notify me when the cleanup is complete. Under Clean, automatically select which types of files are deleted while Cleaning. All file types, except Thumbnails, are selected by default. Automatic cleaning happens as often as you point out, without activating it every time. Set up Avast Cleaning settings to access Avast Cleanup settings: click on the ☰ Menu icon (three lines) in the top left corner of the app interface. Click Settings. Click the category to manage related settings. Analysis Preferences: Tap and hold the ☰ (three lines) icon near the category, then drag the category up or down. The category at the top of the list has the highest priority, while the category at the bottom has the lowest priority. High priority categories are displayed primarily when using the Tips feature. Photo Optimizer: Contains options for optimizing images. You must have a paid version of Avast Cleanup to use this feature. Delete ads: This option only appears in the free version of Avast Cleaning. Select the subscription option and then follow the instructions on the screen to complete the purchase. If you've already purchased a paid subscription, click ⋮ (three points) ► enter the voucher code to enter a valid activation code. Notifications: Please indicate what issues Avast Cleanup notifies you about. Active notification types are marked ON. Real-time detection: enable the detection of app residues. This allows Avast Cleanup to detect files, folders, and app data left behind by apps you haven't stalled. Subscription: View the activation code and learn more about avast Mobile subscriptions. You can also drop off your current subscription if you want to use the activation code on an alternative device. This option only appears in paid versions of Avast Cleanup.Cloud Services: Click Connect next to a cloud storage provider (Google Drive or Dropbox) to connect to your account or create a new account. Click on sliders to turn on or off the settings you want to apply to cloud shows. To log out of your cloud storage account, tap the ⋮ icon (three points) next to your account, and then select Sign Out. Personal Privacy: Turn or turn off the ability to share anonymous data with third parties for analytics. About the app: Check which version of Avast Cleanup is installed on your device, or review the end-user license agreement.
