Windows Only: The free Google Chrome Backup app makes it easier to create, back, restore, and manage your profiles with Google's new web browser. If you take a ride on our user's Google Chrome guide, you already know that you can create and maintain multiple user profiles with Chrome, but there's no simple default GUI GUI. Google Chrome's backup utility fills this gap, while making it easier to switch between profiles, adding extended switches to profile labels, and more. Google Chrome Backup is free, only Windows requires .NET 2.0. Fans of Firefox, your browser was born with the tools needed to manage multiple Firefox profiles. Google Chrome Backup Parhelia Tools via gHacks New beta browser Google Chrome officially took to the streets just a few minutes ago and we rolled up our sleeves and took a quick look at all the newest browser on the block has to offer. Keep reading for a detailed screenshot tour of the exciting new Google Chrome browser. Like Speed Dial in opera (or Firefox extension), Google Chrome offers shortcuts to users whenever a new tab opens. These shortcuts include the most frequently visited sites, site searches that you often use, recent bookmarks and even recently closed tabs (in case you want to reopen the tab). This may not seem quite accurate at first, but over time it may turn out to be a killer at the start of the page. Chrome automatically looks at the search boxes you use. Next time you want to search this site instead of opening a page and find a search box, you can use the omni bar to search this site quickly and easily. For example, after one search on Amazon, I could do a second search from Chrome just heading for the omni bar by clicking as well and then Tab to automatically complete the Amazon search. This allows Amazon to search from a bar location (which you can see from a light blue box), so all you have to do is enter your amazon search terms and hit Enter. Like almost every browser these days, Google Chrome has added a mode called incognito mode. When viewed in Incognito, none of your actions will be recorded on your computer. This means that neither the history nor the files stored in the cache, nor the cookies, nor the evidence that you were naughty. (Firefox users, check out the previously mentioned Stealther.) All tabs are re-eds are just like in Firefox, but you can also very easily break out of the window tabs it is currently held in. Google Chrome Task Manager gives you an overview of the current running tabs and plugins just like Windows. You can kill any startup process anytime out of this box. The fastest way to open a task manager in Chrome: Shift-Esc. The first time you install Chrome, you'll want to import bookmarks, passwords, and other settings from Firefox. I Am I that if my default browser were Internet Explorer, that Chrome would import from IE. If you're interested in Google Chrome but aren't hot on Google search, you can actually change your default search engine if you like. One of the first things that you will notice when navigating to different URLs is that Google Chrome emphasizes the root domain in each URL, presumably, among other things, as a kind of anti-phishing feature. If you're looking for this feature in your current Firefox installation, check out the previously mentioned Location2 extension. Saving passwords in Chrome looks and works very similar to the new password processing in Firefox 3. Turn any web app you keep open all day (such as Gmail) into a separate app through the tab drop-off menu next to the omni-bar. When you create a new app this way, it encourages you to create shortcuts on your computer using the Google Gears hint. The resulting web application has its own shortcut, its own element in the taskbar and an even more consolidated browser window - the lack of a location bar, search box or any of the traditional browser tools. It's kind of like having Prism built into Firefox. Web developers will be happy to see Google Chrome inspectors, a relatively complete DOM inspector, and a resource tool very similar to what developers get in Safari. Bookmarks in Chrome are also almost exactly the same as bookmarks in Firefox 3 with a new star icon (it's only on the other side of the bar place). Options in Google Chrome, as you can see, are extremely limited at the moment, just like much of Google Chrome. The downloads don't go to another window, but instead show up in the taskbar at the bottom of the browser. Given how much care Chrome gives saving space, the download bar is huge and a bit ungainly. What do you think of the new browser offering from Big G? I think you're going to give him an old college try? Let's hear your thoughts in the comments. Google Chrome We have a new, always the latest version here. Chrome overtakes Firefox among power users, and for good reason. It's incredibly powerful,.... More Click to watch Now that you've enjoyed Google Chrome headliner features and speed for nearly a week, it's time to dig into less obvious features and options that you don't yet know. Become a master of shortcuts, look under the hood and adjust his behavior and skin with some of the best shortcuts, bookmarks, additions and fine functionality in Google Chrome. The new Google Chrome beta browser officially took to the streets just a few minutes ago and we ... Read moreWhat you don't like Google Chrome? Here, there is a user power guide to firefox 3. You already know about Firefox 3's marquee new features, but now it's here Dig deep and ... MoreMousing Around ChromeDespite its Its As a minimalist browser that opts out of all extras, the Chrome interface is actually sporting quite a few useful features. Here are a few that will speed up your mouse viewing even more: Click and hold (or press the right button) Back or Forward to go directly to the page far behind or forward in your browsing history. If you have a URL on the clipboard, right click the Chrome bar address to insert and go to your destination (and save yourself an extra tap on the Key Enter). Tap and drag any corner of textarea to want it to be to your liking; Great for blog comments, webmail or forums with textareas that aren't big enough to accommodate your masterpiece. Ctrl-Mousewheel to zoom in or out of pages in Chrome.Drag and drop downloads from chrome bar status and desktop to keep them there, or in any Explorer window to keep them there. (You already know that you can drag and throw the Chrome tab into a new box, or back to the existing Chrome window to dock it there.) Chrome keyboard shortcutsIf you don't have much for a mouse, you're lucky: Google Chrome has a lot of built-in keyboard shortcuts, many of which are Firefox Mirror, so you don't have to retrain your fingers. Here are some of our favorites: (Chrome only) Ctrl-B switches bar bookmarks on and off. (Chrome only) Shift-Escape opens the target manager of Google Chrome.Ctrl'L to move the cursor to the address strip. Ctrl'K moves the cursor to the address bar to enter the Google search. Ctrl'T opens a new tab. Ctrl-N opens a new window. Ctrl-Shift-T opens the last closed tab. (Chrome only) Ctrl-Shift-N opens a new window in incognito mode. Ctrl-Tab cycles through open tabs; Ctrl-Shift-Tab reverse cycles through open tabs. Ctrl'J opens the Download tab. Ctrl-W closes the current tab. Ctrl-R updates the current page. Ctrl-H opens the Story tab. Alt-Home downloads your homepage. Ctrl-1 switches to a certain open tab position after 9. Ctrl, Ctrl- , Ctrl-0 increases, reduces and restores the size of the default text, respectively. Tweak Your OptionsHit up Chrome Settings Dialogue (click on the wrench, and choose options) to customize Chrome behavior even more. Set multiple tabs as a homepage. While Chrome's default sketch page of the most visited sites is pretty cool, you can just skip this step and install a browser to open certain tabs each time. Like Firefox, Chrome can install multiple tabs as a homepage. In the area of the options dialogue framework called Open the following pages, enter URLs. Open the last session tabs automatically. Of how Firefox, Chrome can automatically restore tabs from the last session of the browser. In the same area of Options as above, just select Restore pages that have been opened in the past. Add the Home button to the toolbar. The Chrome toolbar is pretty sparse in design, but once you install your homepage (s), you can get to them with a click. Options The basics of the tab, you can also check the Home Show button on the toolbar. Set the default download location. Also in the options, but under the Small Settings tab you can set the location of the Chrome download by default to something other than my documents folder. Master Chrome's Startup SwitchesLike All good open source software, Chrome comes with a long list of startup switches, that is options that you can use when running a program to customize your behavior. While most switches are only useful to developers, a handful let power users do some handy things. How-To Geek jumps into Google's browser and comes with a setup to change the number of... READ MORE: To use the launch switch, create a new Chrome label on your desktop (or elsewhere). Click the right button and select Properties. In the Target field, add the switch in question as you follow the path to chrome.exe. For example, your goal with a -disable-java switch might look like this: C: Documents and settings are some things you can do with Chrome launch switches. Send the number of offers that the address bar offers. Increase or decrease the number of offers in the address rack with the -omnibox-popup-count switch. For example, to increase it to 10 sentences, use -omnibox-popup-count=10. (via How-To Geek) Create and maintain multiple user profiles. Since Chrome learns so much from usage patterns, you can create more than one user personality based on the task at hand. For example, you can customize the Work Chrome and Play Chrome user profile (as you can with Firefox user profiles). While Chrome doesn't offer a convenient utility to create new profiles like Firefox does, all you need is to create a new user directory and then use the Chrome-user-data-dir-launch switch to point it out there. The digital inspiration blog is working down how to create and use multiple profiles in Chrome.Speed before browsing by disabling functionality. If you want to surf without flash, without Java, or even without Javascript (even if it's not exactly a Chrome point, but regardless), there are list-disable Chrome startup switches that can block plugins, content, or features that you don't want, like -disable-dev-tools-disable-hang-monitor-disable-images-disable-java-javascript-disable-logging-metrics-disable-disable-metrics-reporting-disable-plugins-disable-disable-disable-use-all-that-screen-real estate. Using the start-up switch with maximum launch, the browser will automatically fill your screen when you start. Dress up Google Chrome to your liking by downloading the Chrome theme and saving it default.dll in the app's theme app Update, 9/9/2008: Link to Chrome theme download source updated. For users of Windows XP default that folder: Documents and Settings User Local Settings Data app GoogleChrome App.2.149.29 Topics In Windows Vista is: Show Chrome Secret Diagnostic. Information While Chrome doesn't have Firefox super-comfortable about: Config area, it has a few about: pages that show you all kinds of interesting information about what's going on behind the scenes. Check out the full list of Google Chrome hidden about: the pages here. You've already seen Google Chrome with a sense of humor about: Internet Easter Egg, but reader nettles dots... MoreGet Extras: Bookmarks, AutoHotkey scripts, and more Chrome-related DownloadsWhile Google Chrome doesn't support extensions (yet), multiple macros, bookmarks, and other third-party extras can make working with Chrome easier. Here's a quick list. Block ads on Google Chrome with Privacy. Using free web proxies and Ad Looking Software Proxyv, you can block distracting ads in Google Chrome.Create Custom Chrome key shortcuts with AutoHotKey. Our favorite Windows macro language, AutoHotKey, can make browsing with Chrome with your keyboard even easier. Here's a full Chrome label for the AHK file that adds nine keyboard shortcuts (including a much-needed Insert and Go shortcut). Browse the website's RSS feeds or print the page with a click of a bookmark. Without toolbars or extensions, simple old bookmarks come in a very hand. Here's a bookmark that automatically detects and browses the website feed. Here's one that will print the current page. (You can also just hit the ctrl-P keyboard shortcut). Open pages from Firefox to Chrome. If you're browsing in Firefox and Chrome and would like to use Chrome for certain pages, Google's Open Chrome Firefox extension does just that. As you install it, set certain links to open in Chrome, or select a link and select View in Chrome manually from the context menu. You run Chrome with a flash drive. When you're in AN blocking or traveling from computer to computer (but want to save Chrome settings), you want a portable, standalone version of Chrome (free download). Anonymize your Chrome surfing. Chrome Anonymizer scrambles your unique identifier and makes it impossible for anyone to track what you're doing in Chrome.Shuck from Google Branding and Go Open Source with ChromiumSwitch on a more frequently updated and open source version of the Chrome browser, called Chrome. Google expert Philip Lennsen Ionut Alex Chitu explains: Do you want Google Chrome without Google branding and with an open source license (BSD license)? Check out Chromium, open source created for Google Chrome. You can the latest snapshots for Windows or download the code and build it into Windows Mac, Linux.To install Chrome in Windows, go to the latest directory from this page (it should be at the top) and download mini_installer.exe. Note that these shots may be less stable than the version available on the google.com/chrome and you may need to manually update the Chromium.Speaking updates you can keep on top of frequent chromium builds using the Chrome Nightly Builds Updater utility. Look forward to what's comingWord on the street that Chrome comes for Mac and Linux users, as advances-plus it will be in Google's upcoming upcoming mobile phone operating system, Android. (Linux users, if you don't want to chrome and don't want to build Chromium yourself, here's how to run Google Chrome's Ubuntu with WINE.) One useful Ubuntu hacker blogger posts a guide to getting Google Chrome working as a standalone... Read moreWhat are your favorite Google Chrome tips and tricks? I'll shout them out in the comments. Gina Trapani, editor of Lifehacker, loves her Chrome cheated just like that. Her weekly feature, Geek Live, appears every Monday on Lifehacker.
