English (UK) English (USA) Español (Latinoamérica) English (UK) English (US) Español (Latinoamérica) Grade 5: Add and multiply with size and area in this unit for 25 days, students working with 2-dimensional characters. The size is introduced for students by exploring the concrete of cubic units and culminating with the development of a volume formula for the right rectangular prisms. The second half of the unit turns to expanding students' understanding of two-dimensional characters. Students combine previous knowledge of the area with the newly acquired knowledge of fractional multiplication to determine the area of rectangular shapes with fractional side lengths. They then engage in the practical construction of two-dimensional shapes, developing a basis for classifying shapes by thinking about their features. This unit fills the gap between grade 4 work with two-dimensional characters and 6th grade work with size and area.
