TeamViewer is one of the most popular solutions to support a remote desktop on the market, but thanks to the new all-versatile add-on for the Android-enabled app, you can fully control your Android device remotely. Announced in the official TeamViewer blog, this update allows you to fully manage your Android device to provide support or help in setting up, or just about anything else for that matter. The universal addition is actually an additional downloadable option in the TeamViewer app for Android. Once you have it, you will have to turn on the service so that you can provide remote support to the person with full control of your device. Now, this can be ideal if you have elderly relatives who can't be sure using their smartphone and regularly get stuck in menus or apps. It can also be useful for businesses with an IT department that needs to provide remote support to employees and field employees. With the COVID-19 making the contact that little more erratic, TeamViewer Kwick Support potentially got much more useful. You will also need a supported device from one of the following manufacturers to get started: Samsung Motorola LG Sony Blackberry Acer Asus Lenovo HTC Huawei zTE Google Oppo Xiaomi Some Android smartphones will allow you to do screen sharing with the TeamViewer app, which was good, but not quite as intuitive if you need to provide advice or solve the problem. Any device running Android 7.0 must now be able to install a universal add-on that allows you to control the entire user interface without the need for a device in hand. Hopefully this will make providing technical support a little easier. Now you just have to convince your family members to get the app installed... You can get the TeamViewer app to support the Google Play Store with the TeamViewer universal add-on. Read more about Android: FTC: We use income earning auto affiliate links. More. Check out 9to5Google on YouTube for more news: I installed TeamViewer on my computer and mobile phone. I can control/remotely control my computer on my mobile phone, but can I do the opposite and control/remotely control my Android device from my computer? Read this article in Chinese French German Spanish Language This article refers to Android, iOS and Chromebook and users in free or licensed users who are MDS (Mobile Support). Shared with TeamViewer, you can connect and remotely support mobile devices from another mobile device. Users auxiliary device, will have to install the TeamViewer app for
