Last month we received a whole new word added to the Merriam-Webster dictionary, from sriracha to the Internet of Things to (unfortunately) alt-right. Supplements as necessary, because the lexicon is constantly changing, and perhaps never as fast as it was this year of our frenzied dumpster Fire 2017. Fortunately, there are now even more ways to express your roller coaster of emotions now, thanks to the new emoji on apple iOS 11.1 updates. I think we can all agree that sometimes a smiley face can draw a thousand words, and to be honest, at this point, we all need a bit of a typing break. Fortunately, that input break comes in the form of dozens of emojis that are sent to our unsuspecting keyboards and in our eye lines our soon-to-be very confused Baby Boomer parents. Adding emojis is part of Unicode 10, which has previously added 56 emojis to the lineup; This new update will bring 30, and mostly revolves around food, expression, activities, and (woot!) even gender-neutral emojis. Apple has already previewed some of the upcoming emojis for World Emoji Day in July, giving us many reasons to liven up, including an emoji of a woman with a headscarf, breastfeeding emojis, and, naturally, zombies. This latest preview of the upcoming review of the upcoming update is even more exciting though, because we're a hell of a lot closer to actually being able to use them. According to The Verge, these new emojis will be available for beta testing on iOS 11.1 as early as next week; Apple has yet to set a solid release date when it will be available to the public at large, but given the hullabaloo surrounding the new emoji reveal, I think it will be sometime over the next month. In the meantime, you can start developing all your upcoming texts and tweets by taking a look at the new Apple emoji let all the preview. In addition to those already announced in July, here's what you can expect to see in the update: Apple's gender-neutral emoji presents nonbinary emojis in different age and skin tones, taking further steps in ensuring that each is presented with an appropriate emoji and recognizing the cultural shift toward more acceptance and understanding of people who don't fit into the original heteronormative emoji forms. Among the new animal emojis are dinosaur, giraffe, zebra, hedgehog and cricket (but, as The Verge notes, there may also be a grasshopper). Looks like your infamous Land Before Time group chat is going to get 70 percent more lit. Activity EmojiNow you can express yourself when you go curling, rock climbing, sledging, or - all your favorite winter activities - lying in a towel after shower, looking at the wall, and wondering where you're going in life! Creatures Now you can compose your favorite tales in the form of emoticons. Also, sorry, don't be sorry in for using mermaid emojis in all situations, without context, so often that people wax poetic about the woman I once was before I liberally abused my emoji mermaid credentials. Food EmojiListen, I do not know who petitioned for broccoli emoji, but just know what I judge and that I think our resources as a society can be put much better to use. That being said, Apple made it up to us with the addition of pie emojis and Chinese takeaway box emojis as well. Clothes Emoji You can get your #fashion with the addition of new clothing emojis that include hat, gloves, scarf, and trench coats, which I think will come in handy for all your Instagram sleuthing. Orange Heart Yo, I have no idea what it means if your crush sends you this, so you're all on your own for that. Smiley Face EmojisYour friend Smiley Face Emoji has a lot of emotion to handle in 2017 that seems to have led to him becoming a detective, going a little bonkers, shooshing you (! know it's shushing, but it doesn't look like a shoingoshosh?), and swearing up a storm. All in one day's work. I Love You This emoji is a visual representation of the American sign hand sign for I Love You; Now we just need Han Solo emojis to do that person he does when he says: I know. These are just emojis that have been viewed today; To see the emojis that were also viewed in July and get a full look at the size of the emojis we were blessed with, check them all out at Apple here. Luke Porter / UnsplashGone those days when simple words were enough to communicate our thoughts and feelings. The 21st century gave rise to a new form of communication - modest emoji. Most of the main keyboards for Android and iOS have built-in emoji support, but that doesn't mean they represent them in front and center. If you are looking for a keyboard to really meet your emoji-typing needs, then you may need something more substantial. That's why we've put together a list of the best emoji keyboards out there. It has never been easier to convey your emotions via text. iOS emoji is one of the most popular emoji keyboards out there, and for good reason. The app recently reached 50 million downloads, and is perfect for those looking for a way up to their emoji games. There are a ton of emoticons you can use through the keyboard and they are divided into different categories, making it easy to find the emojis you like the most. The keyboard also offers animated stickers, and the ability to customize emojis as your favorites, so you can access them at any time without having to take the time to search for the ones you want. iOS Swiftkey may not be an emoji keyboard per se, but this is the next best thing - a great keyboard. Comes pre-loaded with hundreds of emojis for you to use. Swiftkey is known as one of the best keyboard apps out there, namely its excellent predictive input, which can also be applied to the use of emoticons. For example, when you read a word or phrase, the app offers emojis that you can quickly use. iOS Slash Keyboard is another keyboard that is not only for emoticons, but it has a ton of emoji support. First, the keyboard allows users to share songs, files and more from connected apps. It also allows you to search through a reliable catalog of emoticons, GIFs and stickers. Because of this, you don't have to wade through hundreds of emojis to find the one you want - just search the term in question and it should pop up. iOS Minuum has been around for some time and it offers relatively strong auto-correcting options, word prediction, and more. Not only that, but the keyboard is being billed as one of the best to type with one hand, making it suitable for larger phones. One of its best new features, however, is a smart emoji that predicts the emojis it thinks you want to use based on the message you are typing. The app also learns how you type, meaning the predictions should get better as you continue to use the app. The \$4 price tag is a bit steep for a keyboard like this, but if you find that it works well for you, it may be worth the cash. iOS Android As the name suggests, AI. The type is built around artificial intelligence, and it aims to help people print better and faster. It also allows you to customize the keyboard to better meet your needs, allowing you to change the location of the keyboard, theme, colors and so on. This means that you can place emojis in front and center, and choose from a massive catalog of more than 1000. Like many other keyboard apps, the keyboard can also offer emojis based on what you type. Android Here is a keyboard specially designed to help you access emoji. The keyboard helps you quickly choose from more than 1,000 emojis, GIFs and emojis, as well as customizable themes and text prediction. In addition, the keyboard simplifies the installation of additional emoji packages and supports more than 150 languages. Android Looking to introduce a little more animation to your type of habit? Fleksy can be the keyboard for you. Announced as the most interesting, customizable way to enter, Fleksy supports a number of extensions that allows you to add new features as you see fit simply by installing some additional programs. Perhaps the coolest thing about Fleksy is how easy it is to access emojis. You'll be able to scroll through dozens of emojis in each category, and categories can be switched at the touch of a button at the bottom of the keyboard. And in the case of many other keyboards, you can also install themes. Android Go Keyboard is another customizable Android keyboard that lets you put emoticons, emoticons, stickers and GIFs in front and center. The app turns text into emoticons and emoticons and you can choose from more more 800 emojis and stickers for free. While some claim that go Keyboard is too bloated, it still comes with a ton of great features. It also supports over 60 languages, so if you speak languages other than English, Go has you covered. You can even type with gestures and different fonts. Android Editors' recommendations Misunderstanding can occur when texting or emailing someone, as it is difficult to convey emotions and tones when writing. Emojis are an interesting and effective way to know what the tone of your message is. They have become a staple of text messages, social media and group chats. Individual emoticons are a fun way to share private jokes with friends, and it gives you access to more options when you are looking for the perfect way to respond to a text message or share your feelings in a group chat. If you've ever tried to find the perfect emoji, you're not alone. There are various apps that you can use to create customized emojis on Android and make your messages more personal. Read on to learn about the different apps you can use to create customized emojis for Android and how to use these different tools. Emoji Kitchen The latest beta version of Gboard for Android, launched in February, includes a new feature called Emoji Kitchen. However, you don't prepare custom emojis. Instead, you'll click on one emoji to conjure up a small gallery of new google-created options. Think of this feature as an extended library of what you already use every day. Not every emoji provides multiple options - at least not yet. You will see a message that says: No suggestions here ... Try another emoji when you hit incompatible emojis. This is likely to change as Emoji Kitchen grows closer to exiting the beta. Google confirms that Emoji Kitchen works with these apps: Gmail Messages from Google Messenger Snapchat Telegram Whatsapp We tested a new beta version of Gboard in the Samsung Messages app and Emoji Kitchen does not work. It also didn't work after installing Gboard as the default keyboard. At the moment, this feature is only compatible with a few apps. Here are a few emojis not currently supported in Emoji Kitchen: Crescent Full Moon All Cat Crossbones Body Weather Parts You also need Gboard to be installed as the default keyboard. The method is different between Android devices, but on the Samsung phone we have at hand, the way to customize the language's general control and enter the keyboard by default. Here's How to Use the New Kitchen Emoji: Step 1: Head to Google Gboard Beta Page and Click Blue Become a Tester Step 2: Download the Gboard from Google Play if it's not yet installed. Step 3: Wait. Google dishes out an update that allows emoji cuisine, but the wait may take some time. Be patient. You'll be serving up a cool custom emoji soon enough. Step 3: After the upgrade, open the compatible app and tap the text recording record to activate Gboard. Step 4: Tap the emoji at the bottom, parked next to the space bar. Step 5: You must now see the space between the text entry box and the emoji library. The smiling message reads: Click the smiley face to get the stickers. Step 6: Tap any emoji and you will see a cascade of custom stickers appearing in this empty space. Swipe left or right to find your favorite. Step 7: Click on the label you choose and it's placed in the typing box. Add a message or send it as it is. Emoji Mini Google introduced this feature in late 2018. It uses a camera to capture your face and create about 100 custom emojis. To emoji your face, click the Plus icon in the emoji menu. On the next screen, click the Add button on the Minis map and follow the instructions. Read our full guide to step-by-step guidance. Bitmoji Another Bitmoji tool. It's a separate app that integrates into Gboard. Unlike the Emoji Mini, you create an avatar from scratch compared to using your phone's camera. The app then creates a large library of stickers. You can access this library from Gboard by clicking on the Bitmoji icon located between the emoji and the sticker add-on button.
