Dutch videographer Bas Berkhut sold his antique chandelier and needed an inexpensive hanging lamp. After considering several options, he mounted his full Ikea KULLA lamp from the ceiling. All he had to do with his particular lamp was reverse shadow mount fittings and drilled a hole through a metal rod to support the weight of the lamp from the ceiling. Abajour is actually upside down in relation to where it usually fits. He rigged the electric cord to the power cord of the previous chandelier. If you don't already have an electric and support structure for the outdoor light, this may not be the project for you, but if you do, need a new hanging lamp, and already have a floor lamp you can see if you can reverse the lamp shadow fittings and crack the lamp to hang. Ikea Hacker (en) Bass Berkhout through Ikea Hackers Standing Table Revolution has been spreading rapidly over the past few years, and it's no wonder why. Switching to a permanent table can improve circulation, relieve back pain, reduce stress and strengthen muscles. But the switch can be expensive. Fortunately, people at Priceonomics withstood IKEA crowds to create a guide to the store's most affordable workstations. Standing table with Utby Legssimage via Ikea Hackers.If you clicked on the space and just want a simple table for yourself, try this hack. This design offers you ample space for a monitor, laptop, keyboard and everyday storage. Given the price, it is a lovely piece of furniture, but pay attention to the final height, as this table will not be adjustable after construction. Materials: 1 Vika Amon top (\$20); 1 Utby stretcher (\$90); 1 regiment Ekby Jarpn (\$15); 1 set of Capita legs (\$14)Total: \$139Reigned difficulty: Easy. All you need is a build of the main table and a platform with a screwdriver. Broad Standing DeskImage via Ikea Hackers.As name suggests this hack is the best option for those who prefer a wider workspace. Although this installation is not necessarily fully regulated, it contains two levels, allowing you to sit and stand at leisure. In addition, the base legs extend to 42 inches giving it a larger range than our first hack. Materials: 5 Feet vicky Byske (\$150); 2 packs of Capita brace (\$30); 1 No shelf (\$20); 1 Vika Amon Table Top (\$45)Total: \$245Ded difficulty: Medium: Assembling the main table should be simple. Attached shelf can prove difficult because it requires drilling in the table. A power storm is required. Accelerate Standing DeskImage through Peter Marks.If you need a more reliable desk to suit your storage needs, check out this dodgy. Fashionable almost entirely from ExpedIt shelves, this device allows you to stand around all kinds of boxes and shelves. At less than \$250, it's a great value for size. This is our favorite design, it doesn't necessarily have any living room. Materials: 2 units of 5x1 operational rack (\$120); 2 2x2 Acceleration Acceleration Units (\$80); 1 No Shelf (\$20)Total: \$220Ded difficulty: Average. The build requires bolting individual shelves together. Power drill and 8 metal braces are also needed. The conclusion is if you want to change your work habits but don't necessarily want to pay the top dollar, surely consider these IKEA PERMANENT desks. While manufactured stand-up tables can provide more flexibility and require fewer construction skills, these hacks offer an affordable but functional alternative. Hacking a permanent table from IKEA PriceonomicsPriceonomics is a price guide for everything. They search and analyze hundreds of millions of ads online to build price guides. Get the latest from Priceonomics on Facebook, Twitter, and Pinterest.Title photo Justin Jackson.Want to see your work on Lifehacker? Write to Tessa. On the Ikea Hacker website, a reader turned an Ikea glossy closet door into a computer desk. The result is spot-looking and cheaper than a full one on the table, although you need a table foot to follow suit. Note some of my materials friend because I either had them, or lent them but this is a list of what I would get if I bought it all. Now, if you want, you can add a shade of lamp to your new creation! All you need now is some 1/8 dowels, fabric (you can choose color), and hot glue with hot gun glue. First, drill four 1/8 holes that are about 1/8 deep on top of the lamp in each corner to stick wooden dowels in drill these holes about half a meter from each side on each corner. Then cut 1/8 dowels into pieces that are 7 lengths long and stick one at a time in each hole that you drilled. Now cut a piece of cloth (26 1/2 to 6 1/2) and hot glue long edges of fabric, folding them over a quarter of an inch of hemming fabric without actually sewing. Once you have cleared the edges, glue a short edge of the fabric, with a folded over the cloth facing inwards, to one of the dowels, glued from the top of the dowel about an inch above the bottom. Continue this process for all the other dowels by wrapping the fabric around all of them until you get back to the first one again. When you return to the first dowel, before glue the short edge of the fabric down, fold and hot glue short the edge of about a quarter of an inch, just like you did with the long edges of the fabric previously. Finally, the hot glue of this edge of the dowel you started on. Uou May need to add additional dowels to the top for additional support (7 1/2, and 4 1/2). I run into this LEDBERG cord light at the store the other day and bought two without knowing exactly what to do with them, but I already use one set to get some atmosphere light behind my TV, and later I used another one for a cool looking desk lamp. So here it is. I recycle a lot of discarded materials, I had an old base for desktop lamps lying around waiting for reuse, it was a great chance to put it to good use. I use a leg of a cheap aluminum tripod, (C channel aluminum profile will do the job too) of course, only costs. LEDBERG from Ikea for \$12.00. Double side tape Small Saw or dremel tool (to cut the channel) drill and bits of screws and nuts. The build took me less than an hour, I have to say that the old base helps a lot. It was a pretty direct project. It was just a matter of putting the strips into the aluminum channel. The good thing about Ledberg is that the switch turns on/off on the cord close to the light assembly, so there is no electrical work involved. The lamp has 3 led's strips that can be connected along with the power band. I only use two of them. Measure each of the individual lanes is about 10 plus the connection to power is a couple of inches larger. I cut out the aluminum channel 22 long to fit the 2 strips set up. The thickness of the strip is about 3/8, which fit neatly into the channel. I put it in a canal with a few pieces of double side tape. I drill a couple of holes at the bottom of the channel to connect it to the base as well as some cutting to allow the lamp to go up and down. It's an easy/fun project, and the images are in self-evident degree. In the end I did as much as a lot the final product, although the quality of the light is not as good as I thought it would be (I'm sure the extra band will make a difference), but I'm happy with it. Our editors self-research, test, and recommend the best products: You can find out more about our review process here. We may receive commissions for purchases made on selected links. The best table lamp is flexible, bright and looks elegant, sitting on almost any desk or desktop. For our curatorial list, we have chosen options that fit into the office environment as well as they will be at home, and have chosen a wide range of design and aesthetic style, so that, regardless of your personal taste, there is a lamp on our list for you. Our best choice, the TaoTronics TT-DL16 on Amazon, is a perfect illustration of marriage function and design. It's bright, with adjustable color heat and timer and night light settings, and its sleek, angular chassis blends easily into just about any decor aesthetic. This is the best desk lamp for most people and will suit any of the best standing tables on our round-up as well. This TaoTronics lamp is your table's best friend. It has six levels of brightness and five different light temperatures (2700-3000K warm white, 3000-3500K soft white, 4000-4500K natural light, 5000-5500K daylight and 6000-6500K cool white light), plus it can reach up to 1200 lux, making it the brightest TaoTronics lamp yet. By setting up Advanced Memory, you can keep your favorite temperature and brightness, so you can quickly turn over the perfect lighting, whether you're reading a book or typing a report. The lamp has a stylish but modern look that is both stylish and functional. The base, head and neck are all rotabel, so you can adjust to all angles depending on your activity. Conveniently, the base also has a USB port to allow you to charge your mobile device while burning midnight oil. If eye protection and personalization are your main checkpoints, then look no further than a lamp LED lamp table. It has four lighting modes and five brightness levels that can be adjusted using a touch-control screen. The LED bulb skillfully mimics natural light and boasts a color rendering index of more than 90, meaning it illuminates the room with almost true precision of life. It is also energy efficient and offers a 25-year lifespan. Physically, Lampat also provides good flexibility and agility. The hand leans forward to 40 degrees, the lamp's head has an adjustable slope of up to 140 degrees, and it rotates up to 180 degrees. In addition, Lampat includes a USB charging port and an automatic 30-60-minute timer. Waving desk arm BYB E430 LED table lamp offers lighting that is unique and well-designed. THANKS to a highly adjustable clip that can be attached to the edge of any table, there is Feature for individual lighting modes and six different blackout modes to help satisfy any mood. The included touchpad helps customize each of the lighting and blackout modes, while the 144 included LED bulbs use 80 percent less power than conventional lamps, allowing for more than 50,000 hours. Aside from energy efficiency, BYB has taken great pains to help protect the user's eyes with an innovative light guide panel that helps prevent flickering light and harmful glare. Ultimately, this design function means a less tedious experience in general. As LED bulbs continue to grow in popularity (thanks to their energy-saving advantages), the Lightblade 1500S is a superb combination of exterior and performance with an all-directed head turning that allows complete control over the direction of light. LED light bulbs mean only one watt of energy is used at the lowest brightness and eight watts at maximum brightness, producing a total of 1,100 lux brightness overall. In addition to the USB port for charging the smarphone, the lamp also has capacitive sensors that are directly incorporated into the base of it, so it's a touchscreen. The overall brightness of the lamp results in a color rendering of the index 90 CRI (color imaging index), which is located just below the 100 CRI product of natural sunlight. CRI itself helps determine the lamp's ability to accurately display any full-color desktop objects under the lamplight. With an incredibly attractive price tag, this little adjustable LED light from Sunbeam is the perfect budget board lamp. Press one button to turn the lamp on and off and cycle through three levels of blackout: full brightness, half brightness, and night light mode, which is only 5% brightness. The head of the lamp rotates and the neck is super flexible, so you can strut it as you need it. The base is surprisingly heavy for such an inexpensive item, ensuring that it doesn't tip over no matter how you angle the lamp. Eight LED bulbs last 36,000 hours and all of this is guaranteed to work for at least three years from the date of purchase. This in itself makes it quite a lot, but the build quality, extra blackout features, and adjustability make it an exceptionally good board lamp for the price. The design of the Pixo Optical LED Lamp provides a delicate balance between simple and functional, but with a fun, quirky silhouette. The frame is made of 97 percent recyclable material: high-quality aluminum for the hand and polycarbonate for lampshade and base cover. The Pixo boasts a high level of mobility, with a 180-degree tilt of the hand and a 360-degree rotation in both the hand and the shadows. Elegant LED light produces a pleasantly warm glow, and the battery offers 50,000-hour lifespan. It is also energy efficient, with a maximum consumption of 6W per use and has a full dimmer dimmer Finally, the base includes a built-in USB charger, and the platform itself functions as a holder for your phone or other small objects. Also, for the best fit for your home's carefully designed color scheme, Pixo comes in six different colors (including azure, black, white and brass) and is sure to bring a little flair to your desk space. Special electronic reading and reading of Benet's LED desk lamp is the perfect addition to the office of any engineer, architect or even for students with nightly study habits. The inclusion of Bene's lighting technology offers LED panels that are good for more than 50,000 hours or eight hours per day lighting every day for the next 17 years. Aside from life expectancy, Bene included zero flickering technology with no experience that won't hurt your eyes or cause fatigue. The built-in environment sensor offers several different touches on the control ring to automatically determine the brightness level of the room and adjust the brightness accordingly. When it comes to positioning, a ball-sharing base will help you find the angle you need for a better reading experience. Skip the cords once and for all with the Luxe Wireless LED infusion lamp, which provides up to 40 hours of continuous light before requiring a charge. With a total of 18 unique settings, there are six different levels of brightness and three modes of light included in the 360-degree customizable design that is capable of rotating, twisting and bending. In addition, LED panels are equipped with 28 built-in LED lights that will last more than 50,000 hours of use. The lithium-polymer battery is maintained anywhere from 3 to 40 hours of continuous operation time in just three hours of charging through the included charging cable. Add in one meter of fall protection and you look at a sturdy lamp that is both attractive and durable. The final verdict of the TaoTronics Lamp we highlighted as our top choice is a great choice for almost everyone, with way more features than you would expect from a medium persistence lamp and a great design blend of simplicity and elegance. If you are looking for a simple solution, however, and want to save money, Sunbeam Flexible LED Lamp is a fantastic thing to do. Light color - You've probably heard about the dangers of blue light and the damage it can do to your skin and eyes - which is why it's especially important to pay attention to the color of light coming from a lamp. Many lamps allow you to adjust their light color, from blue to white to warm yellow or orange, to make sure that the type you are working with is healthy. USB port - Many models of desktop lamps come with built-in USB ports. If you don't have a convenient port or To charge your phone nearby, think about buying a model that has one included. It also eliminates the need to have extra-long cords that tangle and make everything appear messy. Style - You'll be on the lamp every time you are at your desk, so it makes sense to choose a model that reflects your personal taste. The design of the lamp also affects its functionality: Some table lamp styles are wireless, which is very handy if you need it to be portable or don't have a comfortable outlet available. Available.
