sense that you wonder why no one has done it before. Unlike many secretive entrepreneurs I know, Mopay doesn't worry that you get their understanding. If your competitive strategy depends on your competitors not knowing your strategy, you are in trouble! No, the idea of Mopay seems so simple that you might think that a few venture capitalists will be able to eat them in a year... until you really appreciate the power of coordination. If you also understand how to create an advantage by coordinating, you too can rip off copycats, lay traps in your wake, so that your less inventive competitors won't be able to follow you. The trick is that people underestimate the effort and value of coordinating things because we think we coordinate in a way that creates a justifiable advantage, we have to buy and own things. But today's winners are reunited with this old Taoist saying that we see spokes in the wheel, but it's an empty center that allows the wheel to move. It's an empty center that matters, not spokes. What does it take to become an empty center? Mopay has spent the last decade building relationships with phone and merchants. When I spoke to the managing director of Mopay in the U.S. Kolya Reiss, a couple of months ago, Mopay had already established a relationship with Sprint, ATT, T-Mobile, and about 375 other carriers in more than 80 countries. How long will it take you to build such a network? In case you are still interested in trying, consider that Mopay has an agreement with about 550 merchants. It takes more work to copy them. Mopay has handled about \$1 billion in transaction costs so far, but the mobile shopping wave is only ramping up, and if mopay plays its hand well it could be in pole position. We've seen this principle at work before. Hulu and Netflix have gotten big by assembling content relationships. Century 21 has become the dominant way of assembling independent real estate agents. The Corporate Executive Board has evolved from a well-built member club into a fast-growing public services company, applying the same principle to corporate executives. Wikipedia has replaced Microsoft and Britannica as the largest encyclopedia, coordinating independent experts. I could give another hundred examples, but you get the point. Power comes from coordination. You no longer have to own things to coordinate them. Do this before your competitors do. How will you use coordination to your advantage? What would allow you to create power if you could find a way to coordinate it? You have to be. While it's easy to put together and it's a lot of easy to drink, it offers a complex taste profile: still bright and fresh, but with enough weight to make it fall appropriate. Bonus: If you're not quite ready for a full-fledged bourbon bomb drink (like an old-fashioned or Manhattan-based bourbon), this drink only includes a moderate amount of whiskey. Liquor.com/Tim Nusog There's some confusion about the origin of the drink, in that it includes the now expensively gone drinking establishment. Was it created in New York Milk and Honey or at the Purple Hour in Chicago? Sam Ross, now at Attaboy's partner in New York, explains: This was a drink he created for Violet Hour in 2008, at the request of then-owner Toby Maloney. He wanted me to riff on a summer drink, says Ross. Usually, making drinks is pretty organic for me, I'm inspired by something or a riff on something. This time I sat down and thought about some combinations and worked on it. This is a riff on the Last Word cocktail, a classic drink also made with equal parts. Further misleading question, the paper plane was also made on milk and honey, then Ross home base, but we never had a menu, so the first recorded copy of the paper plane would be on a purple hour in the summer of 2008 to drink the menu. Another common point of contention: Is the paper plane made with Campari or Aperol? The original was Campari, not Aperol, Ross admits, and it probably first appeared on the Purple Hour menu as such. But it was later revised to Aperol, and is now officially the right ingredient for the drink. Bourbon, however, has always been an undeniable component. Liquor.com/Tim Nusog is a .75-ounce bourbon, Ross says. Of course, I tried it with all types of perfume - rye, apple, cognac - to really make sure bourbon was the right fit. And that was. Meanwhile, the drink was named after the song M.I.A., Paper Planes, and then recently released (an impressive track, says Ross. I listened to it all the time when I was making a drink.). But in the name of the cocktail is only one lone plane. Liquor.com/Tim Nusog While this drink is almost impossible to mess up, Ross offers some tips for making Attaboy a decent paper plane. Although it does not have a preferred bourbon for the drink, it suggests using a slightly higher proof bourbon-43% to 46% ABV-add a little body. Another tip: Don't overwork the drink. You don't want to overwork it or make it watery, but you still want it very cold, he says. Other than that, as long as your lemon juice is fresh and all proportions are equal, no to do it right.
