cover (the sensor closes the inner shutter automatically). In this mode (in semi-automatic mode) calibration is allowed using the ON button. DisCRETE DIGITAL ZOMO Device allows you to quickly increase the base increase (please refer to the line of Digital zoom in the specification table) by two or four times (8 times in XP models), and return to the main increase. To control a discrete digital zoom, click DOWN (8). HOT MENU FUNCTIONS Hot menu allows you to change the basic settings (brightness and contrast of the display, continuous digital zoom and stodiometric rangefinder). Enter the menu to press the M button (9) short. To switch between functions below, click M. Brightness - press THE UP (10)/ DOWN (8) buttons to change the brightness of the display from 00 to 20. Contrast - Press the UP/DOWN button to change the contrast of the display from 00 to 20. Digital zoom - Press the UP/DOWN button to change the digital zoom from 1.0x to 4.0x (or 8.0x in XP models). Continuous digital zoom in 0.1x increments. The initial value of the continuous digital zoom x1.0, if the discrete digital zoom is not active; x2.0 is a discrete digital zoom in 2x; x4.0 is a discrete digital zoom 4x; x8.0 is a discrete digital zoom 8x. Actual growth is a product of the base value of the increase and the continuous digital value of scaling. For example: the base increase of the device is 3.0, the continuous digital zoom value is 1.7. The actual increase is 5.1 (3.0-1.7). - The brightness and contrast settings are stored in memory when the device is turned off. pulsar helion xp50 user manual. pulsar helion 2 xp50 manual
