Please help improve this article by showing more accurate mentions. (August 2010) (Learn how and when to remove this template message) IMDb cannot be a reliable source for movie and TV information and is usually only cited as an external link. Please help by replacing IMDb with trusted third-party sources. Unsourced material can be challenged and removed. (September 2018) (Learn how and when to remove this template message) (Learn how and when to remove this template message) Before we ruled Earth is a two-part documentary miniseries that will premiere on February 9, 2003 on the Discovery Channel. The program included early human history and the challenges faced by humans thousands of years ago. It also includes examples of animals such as: woolly mammoth, megaloceros, American buffalo, cave bear and Irish elk (Megaloceros giganteus). The first chapter is called Hunting or Hunted and the second is called Mastering animals. Episodes Chapter 1 Hunt or Be Hunted (Narrated by Linda Hunt[ 1]). The first part of the series shows how humans started out as prey to other animals such as sabre-toothed cats. It depicts a sabre-toothed cat killing an antelope and leaving the remains of the carcass; Our ancestors try to steal the remains from the cat and one of the group is killed when the sabre-toothed cat recognizes them. It also shows how we discovered tools and used the flint stone. Later the show showed how the more intelligent we grew, the more we could turn the bowl around on the animals. [Clarification is required] species discussed: Homo argster, Megan, Homo erectus, megaloceros, homo neanderthalensis, willow bison and cro-magnon. Chapter 2 Animal Control (narrated by John Slattery. The second and final part of the series takes place during the ice age. It shows how Cro-Magnon and modern humans became the dominant species and how we hunted animals such as mammoth, Irish elk, bears and wolves. Death on the tundra was common and to survive our ancestors should be able to adapt to change, like global warming at the end The last ice age... Something most giant animals couldn't do, and therefore suffered extinction. Species discussed: Cro-Magnon, Cave Bear, Orosz, Woolly Mammoth, Tundra Wolf, Palau-Indian, Maglonix Jeffersonian, Homo sapiens and American elk. References ^ b Before we controlled Earth (IMDb description page) External links on allmovie.com before we ruled earth on IMDb retrieved from 1.7 million years ago in Africa. Homo argster, the ancient predecessor of modern humans, had to dig to survive. They lived in the elements among the monsters of the era, such as a sabre-toothed cat. Over time, early humans evolved and developed simple tools, began communicating, and learned to control their most important tool: fire. However, the monsters were still there. 300,000 years ago, Homo erectus learned to hunt down the giant Irish elk, using fire to propel these large animals through a narrow gorge over a cliff. While the best hunting skills, proximity is still a need to kill a giant animal. 40,000 years ago, Neanderthals were on their shape, hunting animals like giant willow bison. Neanderthals have been usurped by a whole new breed of humans, the Cro-Magnon. They adapted and survived when Neanderthals couldn't. From around the Internet, the Emmys are nominated in one primetime. See more awards » Editing before we ruled the Earth is an odyssey of evolution, from Homo argster in Africa 1.7 million years ago, to Palau-Indians who lived in North America 11,000 years ago. Detailed recreations of Hominid life over seven time periods, spectacular desert locations, state makeup effects of art and animals animated 3-D photo-realistic bring the past to life. Factual. Amusing. Fascinating. How did we solve the problems to protect and support our families and ourselves? What are the technological innovations that helped move us up the food chain? Early man's ability to adapt is what propelled them to the four corners of the Earth and beyond, before we ruled earth. Written by Bill Latke Plot Recap | Add Dance Summary | Conservation | Bison | Giant Sloth | Waterfall | See all (21) » Parental Guide: Adding Advisory Content to Parents » User Reviews Editing Release Date: February 9, 2003 (USA) See more » Also known: Living with Monsters See more » Discovery Channel See more » See full technical specifications » Editing a gay couple Argster take the first step up the food chain by learning to clean meat using a bin hand stone. A million years later, the hunting of four Irish reindeer by a tribe of homemade erectus goes a long way when the torches used to propel the heard failed to stay lit. A tribe of Neandthals makes good but dangerous live hunting bison until the cooling climate reduces the available gameplay. Written by David Foss Plot Recap | Add Parental Guide: Add content advice to parents » Editing Megantereon (Cyber-Toothed Cat) kills Ancylotherium around dawn. Later that day, the body disappeared almost entirely fewer ribs and some meat chops. This is impossible due to the cat teeth (as mentioned by the number) and the fact that Megantereon is not that great. The only way that would be possible is if the two scenes were separated in a few days.
