Differential algebra and differential geometryMalgrange, Bernard, , 2002Integrativity and tail scores for Gaussian rough differential equationsCass, Thomas, Litterer, Christian, and Lyon, Terry, Annals of Probability, 2013Solititon equations and differential geometryTerng, Chuu-Lian, Journal of Differential Geometry, 1997Algebraic Geometry of Solitonic EquationsMulah, Motohiko, Proceedings of the Japanese Academy, Series A, Mathematical Sciences, 1983Agebraic model of the transit differential geometry of Helmin, Victor W. , Bulletin of the American Mathematical Society, 1964In Newton-Type method of differential algebraic equation , S., Legaz, M.J., and Pedregal, P., Journal of Applied Mathematics, 2012The Cauchy-Riemann Equation and Differential Geometry Wells, R. O., Bulletin (New Series) of the American Mathematical Society, 1982Geometry Of Stochastic Delay Differential EquationsCatuo, Pedro and Ruffino, Paulo, Electronic Communications in Probability, 2005 , Murat and Bayram, Mustafa, Abstract and Applied Analysis, 2013Interated functional equations and algebraic geometryDubrovin, B.A., Focas, A.S., and Santini,. M., Duke Mathematical Journal, 1994Page 2On immature perturbations of non-degenerative planning centersThe New, Douglas D., Publicacions Mathematics, 2014 Intermittent juxtaposition of two planar linear foci can have three nested crossing limit cyclesFrayr, Emilio, Ponce, Enrique, and Torres, , 2014Hopf Bifurcation limit cycles in Discontinuous Li'nard SystemsXiong, Janqing and Han, Maoan, Abstract and Applied Analysis, 2012The conditions for asymptic stability invariant diversitySty, I. N., differential and integral equations , 1995Theremothere theorem for integral and functional integral equations with ruptured nucleiHassan, Ezzat R., Abstract and Applied Analysis, 2012 Existing and uniqueness of the exponentially stable cycle limit for the class of nonlineous systems through the approach of time and domain with differential inequality, Yong Jo, Wu, Yu-Biaw, and Wang, Ching-Cheng, Journal of Applied Mathematics, 2013A CUBIC SYSTEM WITH INVARIANT TRIANGLE , S'aez, E., and Sz'ant 'o, I., TaiwanEse Journal of Mathematics, 2003existence AND UNIQUENESS LAX-TYPE SOLUTIONS TO THE RIEMANN PROBLEM OF SCALAR , In-Chieh, Taiwan Journal of Mathematics, 2013Continent properties for divergence form boundary data homogenization problems Feldman, William M. and Chang, Yuming Paul, Analysis and PDE, 2019Cyclic growth and global stability of the economic dynamics of the type Kaldor Albin Tetchi, Ku, Gipolite and Tia, Kesse Tiban, International Journal of Differential Equations, 2017Page 3Stability of difference problems generated by endless systems of quasi-linear functional parabolic differential equationsJaruszewska-Walczak, Danuta, Bulletin of the Belgian Mathematical Society - Simon Stewin, 2011Method Lines for nonlinear first-order partial functional differential equationsShafransk, A., Bulletin of the Belgian Mathematical Society - Simon Stavin, 2013Comparison results and availability of related solutions to strongly nonlinear differential equations of the second orderMarcelli , Christina and Papalini , Francesca, Topological Methods in Nonlinear Analysis, 2009Capacity of weak and very weak super-solutions to porist middle equationLehtel, Pekka and Lukkari, Teemu, Mathematical Journal Of Tohoku, 2018In the tricomy problem of The Chaplygin EquationXu, Meng, Liu, Li, and Yuan, Hairong, Abstract and Applied Analysis, 2015Stability Travel Wave Fronts for Nonlocal Diffusion Equation Delayed Nonlocal ResponseCheng, Hongmei and Yuan, Rong, Taiwan Journal of Mathematics, 2016Embedded Waveform Relaxation Techniques for Parabolic Partial Functional Differential EquationsLiu , June, Jiang, Yao-Lin, and Xi, Hong-Kun, Taiwan Journal of Mathematics, 2011A Modified Generalized Collocation Method Lagerre-Gauss for factional neutral functional-differential equations on Half-LineBhrawy, Ali H., Al-Sahrani, Abdulrahim, Baleanu, Dumitru, and Alhamed, Yahya, Abstract and Applied Analysis, 2014 , zhaoven, Chang, Xiujuan, and Shao, Jing, Journal of Applied Mathematics, 2014Homotopy Method of Perturbation for multidimensional non-linear connected systems of parabolic and hyperbolic equationsSweilam, Nasser H., Haser , and Al-Bar, Rabab F., Topological Methods in Nonlinear Analysis, 2008Page 4Functional differential equations of the second orderYankovsky, Tadeusz, Bulletin of the Belgian Mathematical Society - Simon Stavin, 2003Casilinic method of functional differential equations with delay ArgumentsDiki, Agnieszka, Bulletin of the Belgian Mathematical Society - Simon Stewin, 2011A Note on factional differential equations with factional separated border conditionsAhmad, Bashir and Ntouyas, Sotiris K., Abstract and Applied Analysis, 2012A Monotone Method for Fourth Order Periodic Boundary Values Problems and Periodic Solutions to Functional Differential Equationszuo , Wenjie, Jiang, Daqing, O'Regan, Donal, and Agarwal, R., Methods and Application Analysis, 2005Equivalence for Differential, Odinet Renee, African Diaspora Journal of Mathematics, 2009There existence and uniqueness results for non-linear partial differential equations Marashi, H.R., Afshari, H., and Ja, C.B. Mathematics, 2017Tegrial BVP for a class of impulsive functional differential equationsHe, Xiaofei, Xie, Jingli, Chen, Guoping, and Shen, Jianhua, International Journal of Differential Equations, 2010Ne-window notes on the existence of a solution for conventional differential equations through a fixed pointHe, Fei, Abstract and Applied Analysis, 2014Five-dot boundary problems value for $n the order of differential equations by solving , John, and Kunkel, Curtis, Involve: Journal of Mathematics, 2008Existence and uniqueness of solutions for fractional differential equations with nonlinear boundary ConditionsLiu , Xiping, Li, Fanfan, Jia, Mei, and Ji, Ertao, Abstract and Applied Analysis, 2014Page 5Convergent Dysorcality and Non-Discical criteria for second-order linear differential equationsAlmenar, Pedro and Yadar, Lucas, Abstract and Applied Analysis, 2013Disfocaliti and Unnesome Solutions nth , WJ, Rocky Mountain Journal Mathematics, 1981Encenic conditions and sufficient conditions for disfocality and disconjugacy differential equation. Elias, Uri, Pacific Journal of Mathematics, 1979Meromorphic solutions to non-linear conventional differential equationsSiddheshwar, P.G., Tanuja, A., Bhosnurmat, Subhas S., and Barki, Mahesh, Tbilisi Mathematical Journal, 2019France Conversion Complex and exp-functional methods for fractional differential equation, Ahmet, Guner, Ozkan, and Cevikel, Adem C., Abstract and Applied Analysis, 2013Generalized Method Kudryashov for Time-Fractional Differential EquationsTuus Demiray, Seima, Abstract and Applied Analysis, 2014Oscillation for some non-linear neutral partial equationsLin , Cuanwen and Chuang, Rongkun, International Journal of Differential Equations, 2010Stability on the cone in terms of two measures for differential equations with maxima'Dishliev, Angel and Christ, Snezana, Annals of Functional Analysis, 2010Menary Solutions for Time and Space Fractional Nonlineal Partial Equations, and Alotaibi, Fawziah M., Journal of Applied Mathematics, 2013Perial Solutions for Second Order Ordinary Differential Equations with Linear NonlinearityHu, Xiaohong, Wang, Dian, And Wang , Changyou, Abstract and Applied Analysis, 2013Page 6Banach lattice amounts with hereditary properties of Fatu, Mieczyslaw and Sanchez-Perez, Enrique A., Features and Aproximatio CommentAry, 2014Beutin Ideals and Taylor dominationYomdin, Y., Publicacions Mathematical, 2014Poment on the rapprochement of one family good-of-fits-the-match statistics chi-square distributionUlyanov , Vladimir W. and zubov, Basil N., Hiroshima Mathematical Journal, 2009Ponzelet and Pair Arthur O. and Sebastiani, Marcos, Real Analysis Exchange, 2010Smooth Density for degenerative stochastic equations delaying with hereditary DriftBell, Denis R. and Mohammed, Salah-Eldin A., Annals of Probability, $1995 $'mu$-Paracompactity through hereditary classesZahis, Abdo and Noiri, Takashi, Missouri Journal of Mathematical Sciences, 2020COEFFICIENT ESTIMATES FOR CERTAIN SUBCLASSES FROM ANICINA FUNCTIONS OF COMPLEX ORDERXu, Tsing Hua, Gui, Ying-Chun, , 2011Directive forms $'mu$-Lindel'fness with respect for hereditary classes , Abdo, Al Jarrah, Hayam Hussain, and Noiri, Takashi, Missouri Journal of Mathematical Sciences, 2018Convergenation Speed multi-commercial kindness-in-fits-com Statistics Chi-square DistributionAssylbekov, Chenisbek, Hiroshima Mathematical Journal, 2010In distribution $k of the food free integers, IIDuy, Trinh Khan and Takanobu, Satoshi, Osaka Journal of Mathematics, 2013Page 7Error related analysis and singularly outraged Abel-Volterra equationsBihura , Angelina M., Journal of Applied Mathematics, 2004Gwallron-Bellman Type of Inequality and their application to fractional differential equationsShaoShaoShao , Jing and Meng, Fanwei, abstract and applied analysis, 2013Indeceives a multi-expression possibility without calculating derivativesCants, Stephen G., Real Analysis Exchange, 2019Harmonic perturbations with the delay of periodic separated variables of differential equationsBisconti, Luca and Spadaini, Marco, Topological Methods in Nonlinear Analysis, 2015Poitive Solution , Jianxin and Chen, Haibo, Journal of Applied Mathematics, 2011Infernost Singularity on Cyclical Coatings and Inequality for SignatureASHIKAGA, Tadashi, Journal of mathematical society of Japan, 1999Maximal operators and differentiation theorems for rare sets of , Isabella, Duke Mathematical Journal, 2011Page 8Generized models urn evolutionary processesBenaim, Michelle, Schreiber, Sebastian J., and Tarres, Pierre, Annals of Applied Probability, 2004Theoretic research on the effect of corridors of dispersal on the permanence of predator-prey models in Patchy, Chunqing, Fan, Shenmin, and Wong, Patricia Y. 2013Nonlinear Dynamics in the environmental system with impulsive effect and optimal foraging, Ming and Dai, Chuanjun, abstract and applied analysis, 2013Moding Dynamics Prey-Predator Fisheries Model with Harvest: Bioeconomic ModelRemond, Charles, Hugo, Alfred, and Kung'aro, Monica, Journal of Applied Mathematics, 2019Halling Type II Population Model exposed to rapid random attacks PredatorCarkovs, Jevge'ijs, Goldstein, Jolanta, and zadurski, , 2018Conmaning in one predator, two prey systems with indirect effectsColucci , Renato, Journal of Applied Mathematics, 2013Stationary models in one predator, two prey modelsLin, Jigi and Pedersen, Michael, Differential and Integral Equations, 2001Simptical Behavior Of the Stochastic Predator-Prey System with Holling II Functional ResponseLiu, Chengwen, Shi, Lingzhong, Jiang, Daqing, and Ji, Chunyang, Abstract and Applied Analysis, 2012Global Dynamics, Hongxing, Journal of Applied Mathematics, 2014Global Stability Analysis and Optimal Control of the Collected Ecoepideological Predator Model with Vaccination and TaxationLiu , Chao, Chang, Tsingling, and Li, Jinnah, Abstract and Applied Analysis, 2013Page 9Immein Inequality Check Jensen-Steffensen for Superquadratic FunctionsAbramovic, Shoshan, Yvelic, Slavica, and Pekarich, Josip E., Banach Journal of Mathematical Analysis, 2010MAJOR PROOF Shan-On, Taiwanese Journal of Mathematics, 2007Basina Attraction for various methods Steffensen-TypeCordero, Alicia, Soleimani, Fazlallah, Torregros, Juan R. and Chateyi, Stanford, Journal of Applied Mathematics, 2014Two step Newton and Steffensen type techniques for solving nonlineane equationsJain , Divya and Gupta, Babita, Tbilisi Mathematical Journal, 2012Itken-Steffensen formula for systems of nonlinear equations, VNoda , Series A, Mathematical Sciences, 1992Itken-Steffensen formula for systems of nonlinear equations, IVNoda, Tatsuo, Proceedings of the Japanese Academy, Serie A, Mathematical Sciences, 1990The Steffensen iteration method for systems of nonlinear equations, IINoda, Tatsuo, Proceedings of the Japanese Academy, Series A, Mathematical Sciences, 1987A Class Steffensen-Type Iterative Methods for nonlinear systemsSno, F., Sharifi, M. , Shatei, S., Journal of Applied Mathematics, 2014The Steffensen iteration method for systems of nonlinear equationsNoda, Tatsuo, Proceedings of the Japanese Academy, Series A, Mathematical Sciences, 1984Itken-Steffensen formula for systems of nonlinear equations, IIINoda, Tatsuo, Proceedings of the Japanese Academy, Series A, Mathematical Sciences, 1986Page 30 linear differential equations of the second orderBirbrair, L., Sobolevsky, M., and Sobolevsky,., Abstract and Applied Analysis, 2003 Used solutions of singular differential equation by means of fractional calculus OperatorsYilmazer, Resat and Ozturk, Okkes, Abstract and Applied Analysis, 2013Periodical Solutions for Second-Order Ordinary Differential Equations with Linear NonlinearityHu, Xiaohong, Wang, Dabin, and Wang, Changyou, Abstract and Applied Analysis, 2013Implicimpit One-Step Unit Hybrid Third-Derivative Method for Direct Solution to the Problem of the Initial Value of the Second Order , Mohammad and Omar, Surni, Journal of Applied Mathematics, 2017First order of linear differential equations with involutive latency and hypergeomeric functionsCekal, Stefan and Soshdek, Henrik, Topological Techniques in Nonlinear Analysis, 2018Basis Properties Eifungenctions differential operators of the second order with InvolutionKoassa Asylzat and Sarsenbi, Abdijahan, Abstract and Applied Analysis, 2012Asymptotic forms of positive second-order quasi-linear conventional differential equations with sub-homogeneitis, Hiroyuki, Hiroshima Mathematical Journal, 2001Decision of the first boundary cost problem for the system of autonomous second-order linear partial differential equations of the parabolic parabolic type , Joseph, Husainov, Denis, Kukharenka, Alexandra, and Liberty, Sdenek, Abstract and Applied Analysis, 2012Linearizations of conventional differential equations by the field of preservation mapsOzawa, Tetsuya and Sato, Hajime, Nagoya Mathematical Journal, 1999In the number and complete continuity of weighted eigenvalues measuring differential equations , Meirong, Wen, Jiyuan, Meng, Banda, Chi, Jiangan, and Xie, Bing, Differential and Integral Equations, 2018Page 11Double Perturbation for impulsive differential equations , Pengyu, Li, Yongxiang, and Chang, Shuping, Taiwanese Journal of Mathematics, 2016Weczive solution for double nonlineaic elliptical anisotropic problems with Robin border conditionsIbrango, I. and Ouaro, S., International Journal of Differential Equations, 2015Nonlinear Operators of Monotonous Type and Convergence , Vataru and Yao, Jen-Chih, Taiwan Journal of Mathematics, 2011Fixed point results in a set of $P x,e'e'$ with applications to fractional differential equations, Linging, Wang, Wang and Wang , Xiaoqiang, Topological Methods in Nonlinear Analysis, 2019Positive solution of the only fractional differential equation in Banach SpaceCao, Jianxing and Chen, Haibo, Journal of Applied Mathematics, 2011Local precise management of age dynamics of the population with diffusionAinseba, Eddineed and Anita, Sebastian, Abstract and Applied Analysis, Essential and a monotonous iterative method for non-linear fractional differential systems with four problemsCui boundary points, Yujun and Su, Yumei, Abstract and Applied Analysis, 2014There positive solutions to non-linear higher order Multi-line Value Problemhao, Ming and Sun, Yongping, Abstract and Applied Analysis, 2014Monoton-Iterative Method for solving antiperiodic non-linear problems of border value for generalized equations with delay , Svetoslav, Abstract and Applied Analysis, 2013Nonlinear Sum Operator Equation with Parameter and Application for Second Order Three-Tote BVPsWang, Wen-Xia, Liu, Si-Lan, and Shi, Piao-Piao, Abstract and Applied Analysis, 2013Page 12In the subject of boundary value for scalal linear functional differential equationsHakl, R., Lomtatidze, A., and Stavroulakis, I. P., Abstract and Applied Analysis, 2004Positional Solutions for the System of Nonlineal Fractions, Aziz , 2010Spectre d'ordre un pour un probl'me hyperbolic et applicationsAnane, Aomar, Chacarne, Omar and Ganim, Mohammed, Bulletin of the Belgian Mathematical Society - Simon Stevin, 2003Positional solutions for nonlinear differential equations with the periodic state of the borderLi, Shenjun, Liang, Li and Xu, Tsunhu, journal of applied mathematics, 2012In the equations of the second

order with non-linear impulses. Results of alternative types FredholmRebek, Pavel and Langerova, Martina, Topological Methods in Nonlinear Analysis, 2014Existence and versatility Results for nonlinear differential equations depending on the parameter in the Semipositon Case'hu, Hailong and Lee, Shengjun, Abstract and Applied Analysis, 2012Nonlocal Integrodifferential Problem of Boundary Values for Nonlinear Fractional Differential Equations on Non-Unified Domainzhang, Lihong, Ahmad, Bashir, Wang, Guotao, Agarwal, Ravi., Al-Yami, Marie, and Shamma , Abstract and Applied Analysis, 2013Saction differential equations with factional impulsive and undivided border conditionsFu, Xi and Liu, Xiaoyou, Abstract and Applied Analysis, 2014Positive periodic solution for second-order Singular semi-positive differential equationsXing, Xiumei, Abstract and Applied Analysis, 2012ON CERTAIN ITERATED INTEGRAL INTEGRAL EQUATIONPachpatte, B. G., Taiwan Journal of Mathematics, 2009Page 13Multi-level Gevrey Solutions, A. and Malek, S., Achievements in Differential Equations, 2016Simptical Stability Class Stability Impulsive Equations by Chang , G.L., Song, M.H., and Liu, M.S., Journal of Applied Mathematics, 2012Nexatic properties of third-order solutions of linear ordinary differential equationsGrigorian, G.A., 2016Symptomatic Behavior Solutions for the Compressible Equation of Navier-Stokes in the cylindrical domainKagay, Yesyuki and Nukumizu, Takumi, Osaka Journal of Mathematics, 2008In factional order Hybrid differential equationHerzallah, Mohamed A. E. and Baleanu, Dumitru, Abstract and Applied Analysis, 2014Decis of semi-linear differential equations in classes Gamma and PiTaddei, Valentina and Seek, Paul, Differential and Integral Equations, 2016 Asymptyptic Behaviors for Neutral, Jin and Yang, Litan, Electronic Communications in Probability , 2013In some applications of the roll-up to linear differential equations with Levitan almost periodic odds Navrotsky, Adam, Topological methods in nonlinear analysis, 2017Memoral dependent growth in sublinear differential equations VolterraAppepi, John A.D. and Patterson, Denis D., Journal of Integral Equations and Applications, 2017 Asymptotic Behavior Solutions Class Second-Order quasi-linear conventional differential equations, Masatsugu, Naito, Manabu, and Usami, Hiroyuki, Hiroshima Mathematical Journal, 2002Page 14Annal BJ vol Index. 12, 2006Garnak inequality and derivative formula for the stochistic equation of heat with fractional noiseYan, Litan and Yin, Xiuwei, Electronic Communications in Probability, 2018Local Fourier Transformation and Stiffness for D-ModulesBloch, Spencer and Esno, Helen, Asian Journal of Mathematics, 2004Laplace transform identities for volume stop sets based on Poisson point processesPrivault , Nicolas, Advances in Applied Probability, 2015Degree 12 2-adic fields with a group of automorphism order 4Aw , Chad, Barkley, Brett, Miles, Nicole E., Strosnider, Erin, and Strosnider, Erin, Rocky Mountain Journal Mathematics, 2015Annon and classical invariants, IBorodzik, Maciej and Friedle, Stefan, Algebraik and Geometric Topology, 2015Cnolyubny judging work BJ vol. 12, 2006Lower Boundary with Precision, S.Y., Bernoulli, 2014Dal distance between the solutions points of the second-order linear differential equation Satisfying the common boundary conditionsAlmenar, Pedro and Yadar, Lucas, Abstract and Applied Analysis, 2014Lower Boundary for The Resonances of the Infinite Area Riemann surfacesJakobson, Dmitri and Naud, Analysis, 2014Dal distance jacobian solved problems pdf
