IF YOU LIKED THIS ARTICLE, DON'T FORGET TO SHARE IT WITH YOUR FRIENDS © FORENSE PATOLOGIA GUIDE 2 VINCENT J.M. DI MAIO SUZANNA E. DANA SPANISH LEGAL MEDICINE WAS NOT usually for outstanding anatomical orientation. Clinical and laboratory aspects of the discipline have traditionally had a greater advantage. In contrast, forensic pathology was the basis of legal or forensic medicine in Anglo-Saxon countries. For this reason, unlike these countries, there are no specific texts of forensic pathology in Spain and the bibliography in Spanish in this area is limited to the part devoted to these issues in the manuals and treatises of legal medicine, called, not very current, tanatology, or very few and, in general, old monographs on specific topics. In order to fill this bibliographic loophole, Professor of Legal Medicine of the University of Santiago coordinated Professor Don Luis Conchiro, Professor and Director of the Institute of Legal Medicine of the University of Santiago de Compostela have fulfilled the commendable task of translating this work into Spanish, strictly combining linguistic and technical and scientific aspects. There is no doubt that there are other excellent texts of forensic pathology that also deserve to be translated into Spanish, but the thinking is above all, of students who take the subject of legal medicine in medical faculties, a considerable breadth of them makes them recently recommended as university texts. On the other hand, and despite its seeming brevity, this Guide to Forensic Pathology by Di Mayo and Dana can also be useful for forensic professionals, since it contains a significant amount of information very well organized by these two prominent representatives of American forensic pathology, making this Guide an excellent quick guide. PSI-1TRA FORENSE is a book by PASTOR BRAVO, MAR edited by UNIVERSIDAD DE ALICANTE. FORENSE PSI-ATRA has the code ISBN 978-84-9717-675-0, FROM COLLECTION TEACHING TEXTS. LESSONS I LEARNED IN THE SYNOPSIS CREMATORY Most people prefer not to think about death, but Caitlin Doughty, then twenty-something graduated in medieval history and a certain love for the creepy, began working in a funeral home and thus turned what was a painful curiosity into his profession. He had to learn to take care of all sorts of corpses, entering the insoles of the world with abundant doses of black humor and strange characters from this world and others. Even the ashes reveal all and all and out of a very peculiar trade. And answer questions you haven't even asked: Can a corpse infect us with disease? How many bodies are in the van? What does a burning skull look like? With style and sometimes hilarious irony, Caitlyn turns a taboo topic like death into something as accessible as it absorbs. AUTHOR Caitlin Doughty is a specialist in tanatopraxia, administrator and creator of the YouTube channel Ask Mortician and a degree in medieval history. She is also the founder of the Electronic Order of Good Death and co-founder of the Death Salon. He argues that our fear of death is a disorder for our culture and society, and advocates for a better solution to our relationship with death (and with our dead). I have seen THAT THE LAST MEDICINE AND FORENSIC TOXICOLOGY JOSE MANUEL MUOS-KUIRS CABALLERO Medicine and Forensic Toxicology fall under the so-called social sciences. Their training and use are invaluable in trying to determine what drugs and toxic substances or drugs could be used in actions that can be trial and police investigation. This guide was designed to provide students with a degree in criminology from first contact with these social sciences, and serves as an introduction for other subjects such as forensic tanatology, forensic pathology, gender-based violence or forensic psychiatry among others. Jose Manuel Munoz-Kyros Caballero and Salvador Giner Alberola are forensic physicians at the Alicante Institute of Legal Medicine, physicians in medicine and surgery and adjunct professors at the Department of Health Psychology at the University of Alicante. MARIA TERESA CRIADO DEL RIO The field of legal medicine of living object has acquired from the second half of the last century amplitude and doctrinal and practical importance, so that it will become an important pillar of the current culture and medical and legal profession. At the heart of this area is the invalidity of its core in the clinic and its nuances, specializing in various criminal, civil and insurance captulation. The significant increase in medical and medical casuisticism in this sector is mainly due to the increase in the number of road accidents in direct connection with population growth and the corresponding number of circulating vehicles in the most developed countries. Medical doctrine and practice have subsequently been enriched by the transformation of this discipline into a sector of maximum development and interest in the progressive and alarming increase in the number of cases of responsibility of health workers, which are now undoubtedly the most difficult issue from a scientific and practical point of view for legal doctors. It is therefore natural that this vast area of harm to man has been devoted, over the past decades, to articles, monographs, treaty parts and manuals. Unfortunately, the various laws and jurisprudence of European countries do not contribute to the se produzcan intercambios en los ambitos juridico y medico-legal, lo que constituye un limite para la difusion a nivel internacional de las contribuciones cientificas en la materia. Los analisis comparativos todavia posibles y todavia de gran utilidad, y sus mayores ventajas, se encuentran en los paises latinos como son Espaa, Italia, Francia, Portugal y Belgica, porque tienen una mayor afinidad cultural y jurídica. Esta constatación permite facilmente pronosticar que, el Tratado de María Teresa CRIADO DEL RIO, por estar escrito en lengua española y por la similitud de los problemas de fondo con los países latinos, tanto limítrofes como lejanos, constituirá tanto para los que se aproximan por primera vez, y por lo tanto tienen necesidad de adquirir una cultura especializada sobre bases actualizadas, como para quienes ya practican la profesión y corren el riesgo de anclarse en concepciones y normas ya superadas. Illustrations of communication using laboratory instruments and investigative and laboratory analysis methods. These detailed definitions and illustrations are valuable references to non-scientific professionals, including police investigators interpreting laboratory reports, court reporters, prosecutors and lawyers preparing for trial. FORENSIC RECONSTRUCTION FACIAL Forensic Facial Reconstruction is a reproduction of an individual face 8217;s face from skeletal remains. Used when other forms of identification are very difficult or impossible, it can give the name dead in forensic cases, or in archaeological contexts, to provide a tangible impression of real persons from our past. This complex work begins with a discussion of the importance of the person in society and the history of facial reconstruction, and then to assess the accuracy of modern reconstruction techniques. The Manchester method of facial reconstruction as well as the relationship between the hard and soft tissues of the face are described in detail. Uniquely, it also describes the methods and challenges associated with the reconstruction of children's faces. By comparing all published data on facial tissues and describing tissue variations with references to age, gender, height and ethnicity, this book will be an important reference volume for all practitioners in the field. FORENSIC PATHOLOGY (2ND ED.) VINCENT DIMAYO DOMINIQUE DIMAYO QUE DICE EL FORENSE? UNA SYNOPSIS DE SIETAS SIETAS FERNANDO A. VERDU PASCUAL In the execution of acts typical of their respective professions, judges and magistrates, prosecutors, court clerks, lawyers, police officers, often face situations and facts, full understanding of which is inevitable through legal medicine. However, they are not always easy to find the right tool, which, in an accessible but rigorous way, makes the task easier for them. In order to help reduce this deficit, Professor Verde has done the work that I am pleased to see, aware of the simple nature of these lines, because it does not enrich it in any way. The author, among the many actions that can be brought against the forensic expert, chose as the subject of his book the subject of the greatest procedural, criminal and police importance: the trial conducted by members of the profession to which he is proud, from the lifting of the corpse to the examination of the autopsy, followed by external and internal examinations and sampling. And, with all humility, he warns that his case is in scientific, medical and psychobiological observations to assist in the abdication of justice, made of special knowledge, through observations made with common and logical sense and a lot of patience; comments through which he tries to answer, as accurately as possible, the questions of the lawyer, the judge, the insurance company, etc., in the face of certain events. SIMPSON FORENSIC MEDICINE (2nd ED.) POSTMORTAL INTERVAL: MEDICAL, POLICE, LEGAL AND FORENS E The correct assessment of the posthumous interval requires the cooperation of numerous specialists. The main purpose of this work is to harmonize the actions of these different experts involved in the investigation, and especially those who first arrive on the scene such as the police, the Civil Guard, the paramedics, etc. This multi-religious involvement is characterized transcendently by the enormous importance that the assessments are of being made to calculate the MMI previously they made, which highlights the actions of professionals who examine the body and place of the fact in the first place. This is one of the most complex and complex issues in all legal medicine. In this regard, it was said that the date of death presides over all our expert actions and whether this medical and legal issue should always be resolved? It consists of a CD-ROM with its own program to integrate all the assessment parameters that allow you to get the most accurate approach to the moment of death. JURIDIC PSYCHOLOGIA AND SECURITY: POLITICS AND ARMED FORCES (T.II) Consolidation of Legal Psychology Takes Place Day in And Day Out academic field, being a specific subject of a bachelor's degree in psychology, as in a professional, covering numerous areas of intervention. However, not all applications of legal psychology received the same attitude and emphasis from teachers and specialists. It is one of the forgotten in legal psychology and security corps. This work in two volumes fills an existing gap in an area in which the psychologist is becoming increasingly relevant, being a key part of the selection, training or intervention in the Security Corps, being particularly relevant, achieved by a psychologist in terms of humanitarian assistance tasks, both in war and in emergencies. The rigor with which each chapter of this extensive work has been reviewed is supported by professionals who have intervened in it, collecting contributions from both teachers and members of the Security Corps, experts in some laws and psychology of others, but all of them have the recognized research potential embodied in these pages. FORENSIC PATHOLOGY (2ND ED) FORENSIC TAPHONOMY: POSTMORTEM FATE OF HUMAN Remains This volume contains guidelines for determining when to enable services and how to select a forensic anthropologist in your research. Many examples and anecdotes are offered by authors who seek to keep the text on a clear, readable level, which is informative but enjoyable to read. Jargon is purposefully minimized, but when used it is defined in context, so that general use and understanding of terms can be achieved. Recently, links have been established between the study of death assemblies by archaeologists and paleontologists (taphonomy) and the application of concepts of physical anthropology to the investigation of death in medical school (forensic anthropology). Forensic taphonomy explains these connections in a broad, multidisciplinary volume. It uses tagomic models in modern forensic contexts and uses forensic cases to expand tagonomic theories. Review articles, case reports, and chapters on methodology to blur the book's unique approach to forensics. L. RAFAEL MORENO GONZALES Among the social and state crime control activities that are deployed in dual regulatory and material aspects, is of particular importance- on the coming prevention and treatment-investigation of crime and prosecution of the offender. Both, contained in the investigation and the court's decision, are fully concerned with the evidence, which is understood as a means of finding out the truth and illustrating the judge. Thus, the classic merchant Jeremiah Benthham points out that evidence appears to be particularly applicable to the practice of the courts; There is its zest; where it takes on the greatest value, where it seems that it exists or that it can exist with the most perfect method. In fact, he adds, in the court case, everything comes to show that art is more magnificent ... Today, expert review is of paramount importance to the growing complexity of crime and the purpose of studying the identity of the offender highlighted by an expert or expert, terco, who has information in science, art and disciplines that the judge does not know and whose task in the procedure is realized, according to the opinion.
