And in order

to reach all corners of the planet, including those where Internet connections are weak, as well as for all users, have or do not top-line phone. For them in Menlo Park they created Messenger Lite, or just like the lighter version of Facebook Messenger. Easier and lower consumption of resources and data. It is a major difference with his older brother, always accused of consuming too much data in every way. By downloading the app, you can check it out, access the menu, interface and the rest of the app design has a much-needed value. Now if you have a Samsung S8 and 4G connection you will be able to download it as well. It's not limited to more modest devices, and it's enough to log in to a social network user account. In fact, if you often have some places where the signal is weak, you can use it more safely than the full version, which always requires more broadband. Don't chat with your contacts because of a poor connection or a modest device. The main features check out the basic features that you will find in this lightweight version of the app to talk to your Facebook contacts: Send messages to all your contacts. Join group chats. Phone calls. Takes up less storage space (less than 10MB). Higher download speeds. Less data usage. Optimized for devices with 2G connections. It can be used in already outdated versions of Android, such as gingerbread. We have to admit that it's good that Facebook was happy to run a version of its app, so for that, just access Google Play and don't have to use overdue versions like APKPure, APKMirror or Aptoide. What about the iOS version? Unfortunately, you won't find it in the App Store, the reason it exists on Android is because it has a great fragmentation between the devices that use this operating system: There are all kinds of templates. However, the Apple smartphone is limited to some models sold equally around the world, making it useless to keep this version for your devices.
