Message with friends and family while your phone stays in your pocket the latest updated on 09/21/20 There have been 3 updates in the last 6 months In this version there are 0 flags on VirusTotal also available on the Android WhatsApp messaging app not only for iPhone and Android phones. WhatsApp for PC allows you to use the popular messenger app on your Windows Computer and communicate with family and friends connected to WhatsApp, wherever they are. Prosit free: WhatsApp Web is free to use and does not include ads. Secured end messages: WhatsApp messages are protected by text encryption using the Open Whisper Systems signal protocol, which is also used in the private Messenger Signal, Facebook Messenger and Google Allo. WhatsApp, by default, encrypts messages from end to end; for some other encrypted messenger apps, such as Allo, you need to actively choose chat using encryption after all. WhatsApp for PC is tied to your mobile phone number: The WhatsApp version in Windows uses your phone to authorize your account. During the setup, you will be asked to use the QR scanner on WhatsApp on your phone to scan the code on your computer. Once set up, you can use any phone or computer for chats, with everything synchronized between devices. WhatsApp also uses your mobile phone number to identify you and your contacts. (Curiously, while the official name of the WhatsApp Web app, you don't use a WhatsApp web client or web browser for chat, but a WhatsApp app for PC.) Individual and group chats: Talk to someone on the one-on-one contact list. You can have group chats with 256 family members and friends and choose members as group administrators. You can share videos and photos, take pictures and send photos with WhatsApp, share documents, record voice messages, add stickers and send contact information from WhatsApp's contact list. SEE: Android Security and Privacy Starter KitConsDoesn't contain all the features found in the mobile version: Unlike the mobile version of WhatsApp messenger, you can't make voice or video calls from person to person using the WhatsApp desktop app. Facebook's data is concerned: In light of news about how Facebook protects and fails to protect its users' data, WhatsApp users may be justified by being concerned about how WhatsApp protects information about its account. (The WhatsApp founder's decision to leave the company is reportedly due to security concerns about Facebook's failure to reduce privacy concerns.) In a recent update to the terms of service, WhatsApp stated Facebook does not use your WhatsApp account information to improve your experience with a Facebook product or to provide you with a more relevant Facebook ad experience on Facebook. FOLLOW Download.com on Twitter to keep up with the latest news app. Other chat apps offer all-to-end encryption without Facebook luggage: There is little that WhatsApp offers that you can't find in secure messaging apps. If you need to be on WhatsApp to communicate with someone, that's fine. But if you're looking for a secure and accessible chat app, you can find other - and perhaps better ones - of them, including a free and open source communication service from Open Whisper Systems that allows you to hold the final encrypted text, voice and video chats for free. Bottom LineWhatsApp for Windows is an easy way to keep in touch with family and friends who also use the app when you're away from your phone. The pc version lacks some of the features found in the mobile app, and if privacy is your main concern, you may want to consider another messaging app not tied to Facebook. Ademes es muy c'modo pasar de un chat otro y compartir im'genes. gslaura whatsapp para PC es la versi'n oficial para computadoras Windows de WhatsApp, muy similar en funcionamiento a la versi'n web, pero con algunas ventajas como la posibilidad de editar el perfil de usuario y el soporte para not lasificaciones en escritorio. El proceso para vincular ambos dispositivos es a trav's de los c'digos QR. Es compatible Con Windows 8 y version rear. WhatsApp pair PC se sincroniza con la aplicacion instalada en tu telefono inteligente, lo que permite que todos los datos de las conversaciones y mensajes llegados a tu cuenta se vean reflejados en la pantalla de tu computadora. Esto hace posible que puedas mantener la comunicaci'n con tus contactos desde la comodidad de tu computadora o porttil, dejando el telefono guardado en el bolsillo. WhatsApp pair PC (32 bits) se encuentra disponible tamb'i'n para Android, Windows Phone, BlackBerry, iPhone y Mac. Ortografia alternativa: WhatsAppSetup-.exe, WhatsAppSetup.exe Ltima actualizaci'n: 24 de enero de 2020 a las 03:15. WhatsApp is a free chat messenger for communicating with phone numbers associated with the app. The app is available on a mobile phone, both Android and iOS, as a web version for the browser, or as a desktop app for the computer. WhatsApp can be downloaded from the Apple Store or The Play Store. It's a chat app that also has features for video or call over the internet. Think back to the era before WhatsApp, when chat apps were mostly conducted through computers, and text messages at cost were the only way communicate if someone doesn't want to call. Whatsapp has revolutionized the communications world by bringing chat to mobile phones linked to a mobile phone number rather than an email ID. Whatsapp is a messenger that allows people to communicate with anyone who has an app on their smartphone. WhatsApp allows users to communicate, create groups, broadcast in user lists, make audio and video calls over the Internet, share stories, exchange messages (pictures, videos, audio), send voice messages, send messages, use emoticons (and gifs) and more. With the internet and WhatsApp desktop, users can now sync between devices and always be connected. End-by-end encryption provides a secure and reliable connection. You can share your location, contacts, and use Live Location for directions. What is WhatsApp compatible with? Whatsapp is available for free on all devices. It's compatible with Android, iOS, Mac and Windows PC. The app is primarily a mobile app, with the web version now available for browsers. There is also a WhatsApp app for the desktop. What alternatives to WhatsApp? There are a number of alternatives to WhatsApp, and you can compare them by function. Facebook Messenger offers a chat app related to Facebook. Interestingly, WhatsApp is also owned by Facebook, but the difference is that while Facebook Messenger users log in to the details, WhatsApp connects via address book over the phone. Messenger is closely linked to Facebook's main app, with reactions to stories offered directly through Messenger. The ease of use in WhatsApp is much higher though, and being able to connect with someone you're not connected to via Facebook (or don't want to be) is a big plus for WhatsApp. Another messaging or communication app is iMessage, which allows you to exchange text from Apple's iOS to another for free. However, iMessage is limited due to its connection only to iOS users and does not have the number of features that WhatsApp offers. Viber, Signal, WeChat, Telegram, Skype are all communication apps but do not have the reach or flexibility of WhatsApp, so they are limited in communicating through free messages or calls. The zoom, while great for calling, is still cumbersome for chats and other features that WhatsApp offers freely and easily. What is WhatsApp Web? The web version and desktop app are mobile app extensions and reflect chats from the mobile app after sync. The WhatsApp web app syncs with the mobile app for real-time messages on both devices. It doesn't work independently of WhatsApp on a smartphone and requires the phone was charged and connected to the display of messages in real time. People use the desktop or WhatsApp web to share files from the computer system, write more and more messages because of the simplicity of the keyboard, or or or Use only one device to access WhatsApp while working on your desktop or laptop. What goes in favor of WhatsApp? Thanks to free communication, whether via chat or calls. WhatsApp has completely expanded the spectrum and narrowed global distances, and now it is so easy to be in touch with family and friends from all over the world. It is extremely intuitive to use, easy to connect and seamless to use on multiple devices. Accessibility through a mobile phone number ensures that there is no hassle in registering, adding contacts and remembering usernames and passwords. Contacts with WhatsApp apps are automatically added to WhatsApp's contact list. Audio and video calls that are connected over the internet allow you to communicate for free with people around the world, something that was unheard of just ten years ago. WhatsApp has the reach and reach to be a go-to communication app that gives it an edge over its competitors. It's easy to share media, send messages, record, and send voice messages. Group chats are also a big advantage, so broadcast lists that can be used to send messages to businesses, personal promotions, or greetings are easy. What goes against WhatsApp? WhatsApp is heavily influenced by the speed of the internet, and in places that do not have high internet speeds and stable connections, messaging and calls can be interrupted. Unlike new video conferencing apps such as Zoom, Whatsapp does not allow more than 4 people to be on a call at a time. Spam and unreliable forwards are also something WhatsApp is facing criticism. In terms of connectivity, anyone with your number can contact you on WhatsApp if you don't block them from it. It gives people access to you without your permission. WhatsApp's web and desktop depend on a mobile app, and if your phone isn't connected or charged, you also can't use extensions on other devices. Numerous notifications from WhatsApp sometimes led to a hang-up of the app and even disrupt the functionality of phones. WhatsApp has made communication extremely easy for and with people around the world. Chat individually or in groups, WhatsApp allows people to stay connected at any time. The dissemination of important information is vital at this time, and through free video and audio calls, new customs on the personal and professional front can be noticed. Sharing a live location allows anyone to feel safe in difficult situations, and sharing photos and videos makes it easy to stay connected despite the distances. WhatsApp alone has revolutionized the way we communicate. The app has to do something right if it has gone from being proper Verb. Verb.
