Description The SIGHTRON SIII 6-24x50 LR SF Riflescope, FFP, MOA Reticle (25006) offers a 30mm main scope tube one-piece, made of high guality aluminum aircraft. Riflescope features Sightron's unique ExacTrack windage and elevation adjustment system on the market comes close to exacTrack's precision and performance. The scope of siii 6-24x50 displays the best in all weather construction. It is waterproof, nitrogen filled and provides lifetime internal fog protection for bad weather. All Sightron SIII rifles feature a seven-layer ZACT-7 multi-coating with precision ground glass. It provides superior transmission and light resolution for best performance. Precision ground glass engraved MOA Reticle in the first focus area is designed for use in Tactical and Remote shooting applications. The Quick Focus Eyebell feature allows quick and easy adjustment when in the field The side focus system is designed for ease of use in prone and bench shooting 30mm one-piece main-tube made of high quality aircraft aluminum. The tube thickness is more than twice as thick as the one-inch model to provide maximum rigidity of the Unique ExacTrack windage and exposed elevation adjustment system of large tactical style turrets offered in a 0.25 MOA adjustment. The Torx 20 screw set positioned on top of the dome allows guick and easy adjustment when rearranging back to zero Construction of a waterproof, fogproof, and shockproof ZACT-7 seven-layer multi-coating with precision ground glass. This lens provides superior transmission and light resolution for best performance in Precision ground glass etched reticle performance in the first focus area designed for use in MOA Reticle Matte Black Finish Sightron Lifetime Warranty Magnifications, mm 50 Eye Relief, in 3.6–3.8 Exit Pupils, mm 8.3–2.08 Field of View (FOV) @ 100yds, ft 16.1–3.9 Click Value 1/4 MOA Tube Diameter, mm 30 Windage Elevation Travel 80 Minutes Per Revolution 15 15 Type MOA Knobe Type Tactical Minimum Focus, yds 40 Windage Elevation Knobs Tactical Type (Resettable) Adjustable Objective Side Focus Fully Multi Coated Yes (Zact-7 TM 7-Layer) Sunshade Including Yes Lens Cover Including Yes Waterproof Yes Length, in Weight 14.96, the Oz 25 Long Range Sightron Rifle is engineered and manufactured in Japan for tactical shooters that require reliable optics and optimal performance of a fully colorful ED Glass with the Zact-7 Revcoat[™] varnish gives this scope lens clarity and an impressive 91% light transmission rate. The open tactical tower has listenable clicks, great for faster mid-action adjustments. Shock resistant, waterproof, and made of one-piece tubes, sightron SIII Tactical 6-24x50 FFP can handle rugged handling and strong recoil under harshest weather conditions. Sightron is one of the leading companies in the industry. Having spent nearly three decades in the business, the company has become a synonym for reliable optical products and is very popular among sports shooters. What separates Sightron from the competition is their incredible vision. Unlike many optical giants whose marketing budgets make their development resources ashamed, this Japanese company knows what really matters. Their business model emphasizes on ongoing research and technological advancement, leaving no room for frills and fanfare. Sightron let their products speak for themselves. About outdoor enthusiasts SIII SeriesMany agrees that in terms of high guality optics paired at a reasonable price, the Sightron SIII series is a clear winner in this price class. Customers can choose from a wide range of rifle models that are sold for around 800 to 1800 euros. These models are suitable for long-distance shooting. CNC-engined from aircraft-grade aluminum and given a fine black matte finish, all Sightron SIII riflescopes are built around a 30-millimeter one-piece tube for maximum disdigity. The Japanese brand has developed the ExacTrack Precision Windage and Elevation systemTM which ensures total repeat with P.O.I.accurate, no matter if your SIII rifle is set at or beyond zero. Looking at the optical properties, we can see that Sightron uses ED glass. This lens material is known for its super low dispersion and reduces chromatic aberration to a minimum. Not only that, but ED glass produces very bright images in sharp detail. The surface of the external lens of this rifle is then reinforced with several layers. The Zact-7 Revcoat varnishTM from Sightron makes precision-ground glass from objective lenses and super-light evepjeces permeate. With a light transmission rate of 91%, this coverage will not You're in a low-light environment. Sightron is further away the SIII series was a success by adding a family of TACTICAL SIII models. The rifle has the first focus area reticle configuration (reticle size does not enter/decrease with magnification changes). Superfine at the lowest magnification, the reticle will not cover too many targets even when the scope is set to the highest magnification power available. Per-click adjustments are 0.1 MIL or 1/4 MOA, depending on the specific product in the family. Mil models come with an elevation adjustment range of 23 MIL, and MOA coverage has a range of 80 MOA. Although these models are not engineered for the precision demands of laser points from target shooting, they are more than suitable for tactical use. Impact and recoil-tested to withstand some of the strongest calibers, sightron SIII Tactical riflescopes will not crack under pressure. The last major series change occurred in 2019 when Sightron updated their SIII Tactical towers. All Sightron SIII riflescope models are manufactured in Japan and come with a lifetime warranty. About the Tactical Model 6-24x50 FFPWith only 705 grams to its name, the Sightron SIII 6-24x50 FFP Tactical packs guite a punch. 6-24x magnification and a 4x zoom factor make this scope especially useful when shooting at greater distances. The scope has exposed tactical towers with finely engraved markings. Both the elevation tower and windage are of a multi-turn type and have a turn indicator underneath. The tower is tactile with the click of a sound. That means you'll be able to make adjustments faster than ever before. Note that because this particular model was engineered before 2019, it does not feature relentless functionality and locking. The para lactic dome is very nice. Designed without the sign of often excessive or even confusing distances, this side focus dome allows intuitive parax correction and glides smoothly to the desired position. Parax can be adjusted from 36.5 meters to infinity. Sightron SIII 6-24x50 Tactical FFP can be reset to zero and built to handle extreme weather conditions and rough handling. The riflescope's internal construction is filled with dry nitrogen gas to remove internal fogging and water damage. Although the Mil-Hash reticle is not intended for precision shooting, even at 24x magnification the Sightron SIII 6-24x50 is accurate enough to satisfy most long-range shooters and demanding targets. The sports scope of the black matte finish and the golden markings engraved on the aluminum housing give this unit a sleek and elegant look. That is another thing that separates the SIII 6-24x50 from the post-2018 model which has a standard white mark. While many of Sigtron's competitors rely heavily on complementary products for their optics, this long-range rifle is coming A lot of stuff is already in the box. A thick neoprene scope cover is made in the US and will protect your scope against water and dirt damage. Even better, Sightron decided to give their customers a sunshade that matched their include with the purchase of a SIII Tactical rifle. Talk about added value.
