You're in the army and you're planning on getting married. Or you're planning on marrying a serviceman. Congratulations! But are there any military marriage laws or military marriage rules you should know before you tie the knot? Military Marriage Laws There are no laws governing military marriages. Military personnel can marry whoever they want, including same-sex partners. Military Marriage License There are no military marriage fees and you do not need a special military marriage license. If someone has told you that he or she should pay a military marriage fee, or that you need a special license, you may fall victim to a romance scam. Military marriage rules there are military marriage rules for some groups of people who are in the process of joining the army. Cadets in military academies are not allowed to marry until they have completed military service or otherwise left their academy. Otherwise, there are no rules about who and when military personnel can marry. A set of rules also governs the military fraternity. Among other prohibitions, these rules generally state that conscripts and officers cannot marry. However, there are many exceptions to this policy. For example, if two members of the armed forces are married and one of them later becomes an officer, the relationship is acceptable. Military personnel who wish to learn more about this rule can consult their basic law office services. There are also rules on when members of the armed forces may have their civilian husbands or wives housed with them. Troops cannot take their spouses for deployment. Some duty stations, especially abroad, may be classified as particularly dangerous and may not allow family members or may block family members because there is a lack of family housing. In these cases, troops are sent under unaccompanied travel orders. There are also rules on who can obtain military identity cards and military benefits. To obtain a military identity card and benefits, including medical care, a military spouse must be legally married to a soldier. The military does not recognize common law marriage or engagement. Spouse registration for benefits is free. If a serviceman has told you that registering for benefits carries a fee, you may fall victim to a romantic scam. Now that you know there are no military marriage laws and are familiar with the military rules of marriage, you can start your happily-all-after. For years, entrepreneurship and college have been mutually exclusive. In fact, universities often place entrepreneurs dropped out to start a business. But like the rest of the world, colleges and universities have recognized the power of small business ownership, and many of these institutions have developed programs to educate novice captains of their own destiny. These programs range from a simple collection of business classes to entire business departments. There are about 50 good colleges or universities through entrepreneurship programs across the country, said Charles Heller, director of the Dingman Center for Entrepreneurship at the Robert H. Smith School of Business at the University of Maryland, College Park. Heller identifies the three elements that make up a good entrepreneurship program. Number one is a mentoring program, and mentors should be not only academics, but also people who were there and did it, says Heller, who founded and ran two computer software companies for 18 years before the Dingman Center was established. Our program has 180 mentors, about 60 percent of whom are successful entrepreneurs volunteering their time. Heller says that good programs also have mechanisms to connect entrepreneurs with capital. At DePaul University in Chicago, the private enterprise network offers a forum where fast-growing companies can bring their growth plans to an audience of private and angelic investors. We tend to take one company a year - the most promising firm we can find - and help it structure the plan, which puts its best foot forward, says Harold Welsch, Coleman Foundation Chairman in Entrepreneurship at DePaul. An ability to combine education with learning is another important element of a good entrepreneurship program, according to Heller. Once you find a program with these three elements, Heller recommends determining whether the proposals are academic (where academic credentials are emphasized and teachers are heavily involved) or information-oriented (where entrepreneurs are very involved in learning and planning). In addition, to determine whether there are business that are focused on your specific segment of the small business market. The HomeOffice entrepreneur conducted an informal survey to give you a better idea of the programs available in colleges and Not every school has all these offers, so it's best to learn locally for specifics. Niche marketing is the lifeblood of small businesses, so why should the programs that serve them differ? As business programs grow older, they become more specialized, Welsh says. Franchising and family business are just some of the popular specialties. Creative-focused services make up another fast-growing field, thanks to schools such as DePaul and the New York Fashion Institute, which have developed courses focused on the entrepreneurial side of the arts. Colleges, universities and the government have established relationships in a variety of areas that can benefit home business owners. These include having small business development centers on campuses and assisting with small business innovative research and small business transfer technology programs. Contact the nearest school for information. Wisconsin Innovation Service Center Not helped assess the commercial potential of your latest invention? The Wisconsin Innovation Service Center, run by the University of Wisconsin, Whitewater and the University of Wisconsin Small Business Expansion Development Center, offers a preliminary technical and market assessment of new product ideas from entrepreneurs across the country. The Center evaluates technical feasibility, competitive advantage and current trends that may affect demand for products. The products reviewed range from biotech breakthroughs and software innovations to games and sporting goods. The fee for evaluating a new product is \$495. Greg Stier's story is familiar. The 37-year-old owner of Business Advantage Systems and Networks Inc., Terre Haute, Indiana, has developed a new software program that he believes will take his company to the top leagues. But Stier had a hard time running the company where he wanted to go. To solve this problem, Stier contacted the Rose-Hulman Institute of Technology in Terre Haute, Indiana, about getting interns in search of clients. Getting interns was an attempt to let us do what we pay for the bills - network analysis systems - while we were trying to get (this software) in the world, explains Stier. It will also help him decide whether he needs to hire permanent staff for the job. We want the company to have a project that is related to the field of student studies, says Bill Lindstaedt, director of career services in Rose-Hulman. In the end, his two interns have taught Stier some valuable lessons: that the position he would like to create in the company will be cost effective and that setting realistic goals is crucial. From the mouths of students, you want to determine whether it makes sense to pursue a new market, but do not have the money or resources to conduct market research? The Small Business Institute (SBI) may be the solution. Currently, 180 schools across the country have SBI programs that use teams of controlled business students to help firms with specific issues with minimal or no cost, according to Ronald G. Cook (pictured left), director of SBI at Ryder University in Lawrenceville, N.J., and vice president of marketing and membership at the Institute of Small Business Directors Association. Lynn Nicholas and Barbara Kalmus, co-owners of TeamWork Educational Services, a 4-year-old firm offering a teacher in training and individual training services in Cranbury, N.J., would be more of a learning and learning company. I know the qualities Barbara and I do us well in what we do, but they're not necessarily the strengths needed to do business, says Nicholas. Although they were initially a little cautious, after meeting the student consultants (Martha Nyquist and Mary Pergament, pictured left, L.R.), Nicholas and Kalmus relaxed. We were impressed by their dedication and commitment to it, and their enthusiasm for what we do, says Calmus. Meanwhile, universities and colleges that don't have SBIs may have other similar programs. For example, at the University of Texas at Arlington, the Small Business Development Center conducts free weekly seminars on business topics and offers individual manufacturing companies in-depth assistance in identifying areas and processes that work and do not work. All employees in family Keeping on the same page is not an easy task. If these employees are family members, the difficulty increases exponentially. There are about 100 university family business programs to help firms cope with the problems of the family business. Our family business program deals with issues that go beyond real estate planning and continuity. For example, we have an executive breakfast involving a family business where we engage experts to discuss a specific issue, says Rich Dino, executive director of the Institute for Entrepreneurial Excellence Development (IDEA) at the University of Connecticut School of Business in Storrs, IDEA. The family business program is a member of an organization in which firms pay \$2,500 a year to participate in all program seminars, receive ongoing information on topics of interest, and have access to councils from university faculty.
