AdMob Banner Interstitial Rewarded Video Ads Android Example - In this video I'll help you integrate Google AdMob ads into Banner, Interstitial, Rewarded Video Ads in the Android Example app. Google AdMob is one of the best platforms to make more money using the Android app. If you are a college student, then you can easily make money online with any investment from home. Watch the video and earn \$3 a day. Everyone loves making money online when downloading an android app in the Google Play store. But some students or developers are fighting to integrate AdMob into our Android Application. So here I explain the full procedure to Banner, Interstitial and Rewarded Video Ads example. Let's start our tutorial on integrating admob banner, interstitial and rewarded video advertising example. Create a new project and give some name for your Android app project - select Empty Activity, after creating the project, just open the mainActivity.java default class and add the following code, as below, MainActivity.java package in, vetbossel.googleadmob; import android.content.Context; import android.os.Bundle; import android.support.v7.app.AppCompatActivity; import android.widget.Toast; import com.google.android.gms.ads.AdRequest; import com.google.android.gms.ads.AdView; import com.google.android.gms.ads.InterstitialAd; import com.google.android.gms.ads.MobileAds; import com.google.android.gms.ads.reward.RewardItem; import com.google.android.gms.ads.reward.RewardedVideoAd; import com.google.android.gms.ads.reward.RewardedVideoAdListener; MainActivity Public Class Expands AppCompatActivity Context - Context; Private InterstitialAd mInterstitialAd; private RewardedVideoAd mRewardedVideoAd; @Override protected void onCreate (Bundle savedInstanceState) - super.onCreate (savedInstanceState); setContentView (R.layout.activity_main); Context is it; MobileAds.initialize (this, ca-app-pub-3940256099942544-3347511713); AdView mAdView banner - findViewById (R.id.adView); AdRequest adRequest - new AdRequest.Builder ().build (); mAdView.loadAd (adRequest); Interstitial mInterstitialAd - the new InterstitialAd (it); mInterstitialAd.setAdUnitId (ca-app-pub-3940256099942544-103317312); AdRequest adInterstitialRequest - new AdRequest.Builder ().build (); mInterstitialAd.loadAd (adInterstitialRequest); AwardedVideoAd mRewardedVideoAd - MobileAds.getRewardedVideoAdInstance (it); mRewardedVideoAd.loadAd (ca-app-pub-3940256099942544/52224354917, new AdRequest.Builder ().build (); mRewardedVideoAd.setRewardedVideoAdListener (rewardedVideoAdListener) - public emptiness showInterstitialAd (View) - if (mInterstitialAd.isLoaded ()) - public invalid showRewardedAd (View) - if (mRewardedVideoAd.isLoaded ()) - mRewardedVideoAd.show (); AwardedVideoAdListener AwardedVideoAdListener - новый RewardedVideoAdListener () - @Override публичный пробег наRewardedVideoAdLoaded () - Toast.makeText (context, onRewardedVideoAdLoaded, Toast.LENGTH_SHORT); шоу (); - @Override публичная пустота наRewardedVideoAdOpened () @Override - Toast.makeText (context, onRewardedVideoAdOpened, Toast.LENGTH_SHORT); шоу (); onRewardedVideoStarted, Toast.LENGTH_SHORT); шоу (); @Override публичная пустота наRewardedVideoAdClosed () @Override - Toast.makeText (context, onRewardedVideoAdClosed, Toast.LENGTH_SHORT); шоу (); валюта: - rewardItem.getType () сумма: - rewardItem.getAmount (); Toast.makeText (context, msg, Toast.LENGTH_SHORT); шоу (); @Override пустота наRewardedVideoAdLeftApplication () - Toast.makeText (context, onRewardedVideoAdLeftApplication, Toast.LENGTH_SHORT); шоу (); @Override публичная пустота наRewardedVideoAdFailedToLoad (int) - Toast.makeText (context, onRewardedVideoAdFailedToLoad, Toast.LENGTH_SHORT); шоу (); пакет in, vetbossel.googleadmob; импорт android.content.Context; импорт android.os.Bundle; импорт android.support.v7.app.AppCompatActivity; импорт android.widget.Toast; импорт com.google.android.gms.ads.AdRequest; импорт com.google.android.gms.ads.MobileAds; импорт com.google.android.gms.ads.reward.RewardItem; импорт com.google.android.gms.ads.rewardedVideoAd; импорт com.google.android.gms.ads.rewardedVideoAdListener; общественный класс MainActivity частный RewardedVideoAd mRewardedVideoAd; защищенная пустота onCreate (Bundle savedInstanceState) - super.onCreate (сохраненоВостояние); setContentView (R.layout.activity_main); MobileAds.initialize (this, ca-app-pub-3940256099942544-3347511713); AdView mAdView - findViewById (R.id.adView); AdRequest adRequest - new AdRequest.Builder ().build (); mAdView.loadAd (adRequest); mInterstitialAd - новый InterstitialAd (это); mInterstitialAd.setAdUnitId (ca-app-pub-3940256099942544/103317312); AdRequest adInterstitialRequest - новый AdRequest.Builder ().build (); mInterstitialAd.loadAd (adInterstitialRequest); mRewardedVideoAd - MobileAds.getRewardedVideoAdInstance (это); mRewardedVideoAd.loadAd (ca-app-pub-3940256099942544/52224354917, новый AdRequest.Builder ().build (); mRewardedVideoAd.setRewardedVideoAdListener (награжденныйVideoAdListener); публичная пустота showInterstitialAd (Вид зрения) - если (mInterstitialAd ! null) showRewardedAd (View) - if (mRewardedVideoAd.isLoaded ()) - RewardedVideoAdListener RewardedVideoAdListener - new RewardedVideoAdListener () Toast.LENGTH_SHORT - public void Public void on RewardedVideoAdOpened () - Toast.makeText (context, onRewardedVideoAdOpened, Toast.LENGTH_SHORT); Public void on RewardedVideoStarted, Toast.LENGTH_SHORT); шоу (); Public void on RewardedVideoAdClosed () - Toast.makeText (context, onRewardedVideoAdClosed, Toast.LENGTH_SHORT); Public void on Rewarded (RewardItem rewardItem) currency: - rewardItem.getType: - rewardItem.getAmount (); Toast.makeText (context, msg, Toast.LENGTH_SHORT); шоу (); Public void on RewardedVideoAdFailedToLoad (int) - Toast.makeText (context, onRewardedVideoAdFailedToLoad, Toast.LENGTH_SHORT); After that, we don't need to create java classes just to switch to XML files to integrate JAVA files. MainActivity.java files cover all ads, such as banner ads, interstitial ads, and rewarded video ads. In this example, I'll give Google Test Unit Id and App Id to test the Android app. You have changes that after the publication of your Android app in the Google Play store. Activity Layouts Now we need to integrate Java classes with the XML file to see Google AdMob Ads in our Android app. Open under the reactivity main.xml re-file trajectory and add the following code below to your project. Just change the identifier units already if you have Unit Id for your Android app or just leave we assume Google Test Id to run the ad. activity main.xml <?xml version="1.0" encoding=utf-8?
