We knew that Facebook had been working on a dark mode for its apps for some time. It all started with the announcement of a visual update called Facebook 5, which was presented at the 2019 F8 Developers Conference. The new design mimicked the Facebook Messenger app redesigned and rolled out on the mobile shortly thereafter. The desktop version of the update began rolling out to some users earlier this year. As the Facebook app and desktop experience have changed to match Messenger seemed likely that Facebook would get a dark mode as Messenger was. In addition, master Jane Manchun Wong discovered the code in the Facebook app, which confirmed that the social media giant is developing a dark mode. However, while everyone was waiting for Facebook to roll out to roll out mode in its main app, the company crept it into its Facebook Lite app. Lite is a version of Facebook designed for people with slower connections or for people who want to save money on data usage. It's also a lot less coming at 2.21MB compared to Facebook's normal 159MB app, making it a great pairing for phones without a lot of memory. How to turn on dark mode on Facebook Lite To use dark mode on Facebook Lite, make sure you've updated to the latest version. Then go to the Settings tab by clicking on the three-line symbol in the top right corner of the app. Scroll down a bit and you should see the possibility of switching dark mode or turning off. In other words, you'll have to manually open Facebook Lite and switch the switch when you want to turn on or off dark mode. In addition, iOS users in Canada are currently unlucky. Facebook Lite is not currently available on the App Store in Canada. Hopefully this means that the regular Facebook app will get dark mode in the near future. This seems to be the odd one at the moment, with Facebook Lite joining Facebook's other dark mode apps, Messenger, Instagram and WhatsApp. You can download Facebook Lite for free from the Play Store.
