Facebook mod apk xda download

Today BOTAYIT shares with you the Facebook APP APK MOD, which is completely removed from the ad. You can use the original Facebook feed, this APK MOD will help you experience the best of Facebook and Messenger apps. This FB mod app is shared from a reliable source, so you can be sure that you are not afraid to lose nicks. In fact, it has been edited from the official Facebook app just to remove unnecessary parts: Delete all ads disguised ads such as Sponsor's post, People you may know ostrich types Bring a familiar search frame back: Enter names, emails, emails, emails, emails... From always FB page with avatars to fight for easy-to-view Delete history of bananas. My mods are primarily focused on things like pop-up clutter after most content interactions (Related Posts, People also Share, Other Videos, etc.), as well as Instagram ads, suggested posts, ads (obviously) and, in general, anything that is meant to steal your attention or express it explicitly. the content is original when the facebook MOD APK Messenger MOD APK Delete Facebook and Messenger is already available on the machine Download version of APK above and install So finished installing Facebook's iOS literally the largest social media platform on Earth. This is a version of the collective consciousness of humanity, which belongs to the species of Borg in Star Trek. It was a terrible example. Anyway, the Facebook app itself is a catastrophic black hole of phone resources. It slows down the phone, drains the battery, and Facebook does nothing to improve it. Even if you just use it blindly, it was a platform to bridge the geographical gap between people. But gradually, it became the jargon of the services and ads that Facebook wants us to use. Facebook uses every petty little opportunity to shove things on the screen that you don't want. There is no shortage of third-party Facebook customers on the Play Store, however, not all customers are the same. Some are light, some are very functional and some are beautiful. Today we have an app that just cuts through all the clutter and sets you free to browse your Facebook feed without visual distractions. App developed by XDA evilwombat, aims to remove things like Related Articles, People also shared, more videos, etc., which creep up relentlessly deterring users from a string of free experiences. He calls Facebook LC (Less Crap). Modder says these things can be removed through Xposed extensions too, but having the app won't require a root. You just have to use the download APK and that's it. As for the change, the developer has published a long list of features of the app and bloat it is going to hide. Features hide people you may know from the NOTIFICATION area. (I don't mind this in the news feed, but it's just trying too hard) Hide the Pages you can, how to shit (Facebook's over-promoting Page is what made me start this whole mod in the first place) Hide the Story you can post nonsense (I haven't seen this yourself but others, so I'm pre-emptively nuking it) Hide the best stories from your crap groups (seriously, do they actually think we care?) hide popular stories from your pages/Page Stories you've missed/all of that shit is called these days. (again with pages ... I know how to click on them if I care, thanks) Hide the Offered Products/Product Offers for you crap (seriously guys?) Hide Invite your friends to join this group (or whatever that spam-promotion shit is called) Hide the Groups (we are all able to use the search box to find what we care about, thank you very much). Hide the ads in Instant Articles Get rid of more call-to-action crap note: Facebook will most likely perform server side checks to prevent you from getting into something you shouldn't see, and they'll probably flag your account if you mess with it. Or worse, they'll be upon us. You've been warned. How to install a Modded Facebook App to remove Step 1 ads. Removed all previously installed Facebook apps such as Facebook, Messenger, groups, page manager, etc. They don't always cause installation problems (although they should). (The problem is that all apps in the FB family use information-based authentication for data sharing keys. Include unknown sources in Android Nougat and below (If you use Android Oreo, skip this step) Include unknown sources in Android Marshmallow Step 3. Download the apps you need from the bottom of the post. Click on the APK files to install them. Step 4. If you get any errors this app, install them through the ADB. Download Modded Facebook Apps to disable ads and Crap there are many more things that the app hides. In B it's an attempt to let users do what Facebook had to do (let people communicate) organically without all the garbage. If you are looking for such an experience, you should try this app. Last edit: 10/16/2019 Last updated Messenger update: 10/13/2019 Last corrected Facebook APK update: 11/08/2019 For Android 8.0 Only Latest Facebook SOURCE APK Update: 11/15/2019 Hello. I've been working on a fixed Facebook APK for some time now. My corrected version is trying to get rid of as much clutter, garbage, and social garbage as possible. I'm primarily targeting things like clutter that pop up after most interactions with content (Associated articles, people also share, more videos, etc.) while instagram upsells, suggested posts, ads (obviously) and generally all designed to either capture your attention or disingenuously present yourself as organic content, being, in fact, paid content. While I've seen a number of facebook mods here, I haven't been able to find anything the interaction between user and content. And while this stuff can probably be done with xposed extensions, the good thing about standalone APK is that non-root users can obviously benefit from it too. I don't mind fixing things myself, although I'm basically an ARM dude so having to dig into the megs and megs DEX bytecode all myself was pretty tedious. The community has shown some interest, so I'm publishing a preliminary link to my bleeding edge version below, as well as to the older and possibly more stable version. Obviously you only have my word that I have not submitted malware or Bitcoin miner, although you can unpack the APK and diff it against the shares. Terminology Fashion List (latest version): Hide Suggested Messages/Sponsored Messages - Hide the Snapchat-wannabe Stories bar at the top of the news feed (if I wanted Snapchat, I'd install Snapchat, thank you) - Hide people you may know from the NOTIFICATION area (as well as the main channel, at the moment) - Hide Pages that you can like to shit (Facebook's overpromoting Pages is what made me start this whole mod in the first place) so I'm proactively nuking it) - Hide the best stories from your group stuff (seriously, who actually wants this stuff?) hide popular stories from your pages/Page Stories You Missed/No matter what nonsense is called these days. (again with pages ... I know how to click on them if I care, thank you) - Hide the offered products / Product offers for you nonsense (seriously guys?) find what we care about, thank you very much). Hide People you should follow (actually? they're serious?) - Hide Products shown: maps (please stop giving me ads based on object recognition in photos of my friends, thx) I haven't seen this in a while, but can also hide it because it sounds useless. Hide Selling Groups near you nonsense (again with the click of sales. All we want to do is organically interact with our friends, thank you) - Hide Marketplace Stories for you junk (again, people who don't care about your Marketplace aren't suddenly going to use it because you're pushing ads. While some may still appear, Facebook seems to respect your choice if you click on the triangle and select I Don't Want to See It. Hide almost all subsequent elements. That is, more from related junk pages, what happens when you interact with the outgoing content element (I think). Again, stop trying to grab my attention - I'm quite capable of managing it myself, maybe hide the connection to Facebook nonsense, which sometimes appears (although I haven't seen this at the time, and it's hard to prove negative) throughout the instant articles (though perhaps not the ones that occur after the articles) Hide Related Articles /Popular Out in Instant Articles (now they're just trying to get too hard) at least in the TOP article (are you kidding me...?) to partially hide some instagram upsells (yes, I know where to get Instagram-You can still see a post or two promoting Instagram photos from friends, although this should be better considered in the current release. It's not super high on my radar right now, but I'll get back to it if I find a way to easily reproduce this. Otherwise, the risk of closing power using unverified codes is not really worth it. Kill the screen nag updates. (we'll stick to the corrected version, thank you). Get rid of more call-to-action junk (instagram set, etc.) - Get rid of the group tab (guys, your attempts to increase group participation are seriously starting to backfire) - Get rid of the Marketplace tab (let's do something straight footer nonsense, etc. - Get rid of The Up Next Countdown Bar, which appears after watching some videos (especially episodes). When I watch videos, I watch them for content, not for knowing what's going on after. Stop trying to grab my attention by clicking the next video before I'm even done watching the current one. Well-known guestions: So-and-so is not hiding. I have no idea where to even start looking for this kind of thing. Ads in instant articles may be hidden, but they can appear as lingering spinner boxes. It's hard for me to check this out because most of them are serviced with external ad servers, and my phone has DNS-based ad blocking, so I can't verify vanilla behavior without undoing it. Some of the most casual/annoying unwanted attachments (Learn more, shop now, etc.) can't be hidden. They may have some text in them that can be really useful for this post, so I'm hesitant to just nuke these I haven't done a manifesto cleaning on this version (or one before it, technically). This means stripping out annoying background services related to location crap, Bluetooth scanning, etc. installation before installing, be sure to remove all other apps that are made by Facebook. This includes FB itself, Messenger, Messenger Lite, Page Manager, etc. They don't always cause installation problems (although they should). The problem is that all applications in the FB family use key-based authentication to share data. Since my modded app is signed with this key as well. I've included some of the popular ones below. You may also need to include installing applications from unknown sources. If you got an installation error, try installing with the ADB and see what the actual error is. STUFF: Facebook LC (main reason for all this): The latest version works for Android 8.0 devices only facebook-lc-v16.2.apk Previous (stable) release - must be compatible with

Android 4.1 and above: facebook-lc-v15.3.apk Messenger (v241, The ads have been removed and we hope to update the nags removed): Messenger-v241.2.apk (more tested but will nag you to update) See past releases for earlier versions. Other FB apps signed with the same key (but not modified): Messenger Lite (v37): Messenger Lite (v26): Pages Manager (v143): Workplace by Facebook (at the end of 11/17): group FB Lite (8/5/17): Group FB Lite (8/5/17, 17 re-signed, but otherwise unchanging): glt;/page; Ads Manager: If anyone wants to join forces in terms of decompilation/disassembly/search for haystacks on how to nuke other unwanted FB garbage, please let me know. I can give you the script I use to repackage the APK (although since FB stopped using its nasty Buck multi-dex structure, it's basically just a bunch of calls in sha1sum and apktool). My current method of modding DEX files includes a decompiler (to find the logic I want), disassembly (to find the instructions I want), a hex editor (for actual fixes), and a FixDEXChecksum from the Internet. Of course, there has to be a better way! I'm not sure the smali/baksmali will work here (again, because of the multi-dex), but perhaps the less nasty (no buck) things that FB uses these days may be easier to work with when using smali tools. (I really don't know how this stuff works - I'm more used to ARM code and all this Java stuff is way over my head) Changelog and past releases: v15.2 - Previous release (5 / 2 / 2019) - Rebase to the latest version of APK (4 / 19 / 2019) - Download link: facebook-lc-v15.2.apk v14.2 - Previous release (10 / 15 / 2018)1 - Previous (77 / 25 / 2018) - Rebase to the latest version of the APK source - Download the link: facebook-lc-v13.1 v12.3 - Previous release (5 / 18 / 20 Version of the APK source (v12.1 and v12.2 were intermediate/experimental releases that were withered v12.3 above They were not enough of several things. and were not very interesting) v11.1 - Previous release (3 / 08 / 2018) - Rebase to 3/ 1 / 2018 version source APK No v11.1. 1 download link: facebook-lc-v11.1 v10.2 - Previous release (12 / 07 / 2017) - Rebase to the source version of APK 11/22/2017. This is APK for Android 4.x. - v10.2 download link: th Not necessary: An alternative version from 23.09.2017. This is APK for Android 5.x. Try to do a better job, to get rid of marketrelated nonsense - v9.2 download link: v8.4 - Previous release (9/14/2017) Get rid of the new market recommended rubbish - v8.4 download link: v8.2 - Previous release (8/4/2017) - APK base update to 7/25/2017. V8.2 download link: v7 - Last stable (but outdated) release (7/ 8 / 2017) - Unlock internal menu settings (Power Settings, MobileConfig, Internal Preferences). Access to them can be obtained through a long press. See post for more information. See the main post for the full list of mode and V7 download link: v6 - Last Stable Release (7/ 8 / 2017) - Fix a bug where products showed crap is not hiding properly. You can still see the title, but the actual product ads should disappear - v6 download link: v5 - Previous release (6/12/2017) - Fix a bug where the update saw screen was not disabled properly. Return the built-in browser, which also returns related content related to videos that play directly in the browser. I can try to kill exactly the video related stuff, but it's much more nuanced. - v5 download link: v4 - Previous experimental release (6/7/2017) - Relocated all patches on top of the basic APK this time - Hide related crap content that appears on the bottom half of the screen when viewing the video, which opens with the help of a built-in browser. This is probably one of the worst features of the Facebook app's user interface (partly because it loads external content and has been used as a malware channel). What were these people thinking? - V4 download link: v3 - Last stable release (5/23/2017) - Remove people you may know from the notification list (what the hell they thought??) If I wanted Snapchat, I'd install Snapchat. Try to hide pages that you may like, but it's hard to prove negative). V3 download link: Fashion List: Hide Suggested Messages/Sponsored Messages - Hide Snapchatwannabe Stories Bar at the top of the news feed (if I wanted Snapchat, I'd install Snapchat, thank you) - Hide people you may know from the NOTIFICATION area, (I don't mind this in the news feed, but what moron thought to put this under notice? Hide Invite your friends to join this group (or whatever that spam-request shit is called) - Hide groups that you should join / Suggested groups (we are all able to use Search the box to find what we care about, thank you very much) - Hide Video Chain - Hide Products shown: maps (please stop giving me ads based on object recognition in photos of my friends, thx) - Hide Follow/Share Bar, which appears when you interact with content (I know where to find the Share button, since it's already plastered all over the damn screen, thank you) (now they're just trying too hard) Hide Subscribe with your email address crap from instant articles (are you kidding me...?) partially hide some instagram upsells (yes, I know where to get Instagram if I ever find myself in need to hit something in the top of my head). that appears 2/3 in watching the video. (I don't need another piece of UI garbage to grab my attention flow, thanks) (We'll stick to the corrected version, thank you) - Hide the related crap content that appears on the bottom half of the screen when watching a video that opens with a built-in browser. This is probably one of the worst features of the Facebook app's user interface (partly because it loads external content and has been used as a malware channel). What were these people thinking? Try to get rid of most of the follow-up period (More from related groups, Related Articles Featured for You, People also share). Not sure if this worked since it is difficult to prove negative, but it should work in theory. If facebook was a less crufty piece of crap, I'd be more sure that I fixed the correct way of the code. Get rid of more call-to-action crap (set Instagram, etc.) Famous questions: Communication with Facebook/People you can post shit can't be completely hidden. But looking at the code, it looks like facebook can respect your wishes if you click on the triangle icon and click on I don't want to see it. If not, we'll go back to this way of the code, and so-and-so is not hidden. I have no idea where to even start looking for this kind of thing. Tablet More Video has its text/arrow hidden, but the blue circle still appears in its place - Ads in instant articles may be hidden, but they may appear as lingering spinner boxes. It's hard for me to check this out because most of them are serviced with external ad servers, and my phone has DNS-based ad blocking, so I can't verify vanilla behavior without undoing it. - Last release (05 / 04 / 2017) - Get rid of the associated crap content that appears on the bottom half of the screen when watching a video that opens inside the video. Обозреватель. Это, вероятно, одна худшая функция пользовательского интерфейса приложения Facebook (отчасти потому, что он загружает внешнее содержимое и был использован в качестве канала вредоносных программ). Попробуйте избавиться от признакам для вас последующей деятельности, при взаимодействии со страницей ваш друг любил. Не уверен, что это сработало, так как трудно доказать негатив. Избавиться от более призыв к действию дерьмо (установить Instagram, и т.д.) - V2 скачать ссылку: v1 - Прошлый релиз (04 / 08 / 2017) - Первоначальный релиз No V1 скачать ссылку: ENJOY И BECEЛO! - evilwombat Ps. В какой-то момент у меня была взломанная ресурсами версия, которая заменила все экземпляры Like на Lick, хотя я не уверен, насколько хорошо, что будет летать с современным кодом. as a system application and I can't delete it? All about Messenger .... You'll continue to receive a message notification in the FB-LC app even if you don't install messenger, but you won't be able to see these messages as FB will redirect/make you download messenger (- -) If you're not a heavy user of FB Messenger, you can try in the browser/chrome when you get a notification to see/reply as I am. (Book that link to facilitate access) Otherwise read below.... 2. How to use/update Messenger (or any other FB app with the same signature key 3. But... Why? 1. All apps related to Facebook (including FB for Android, Messenger, Pages) Manager, etc.) on any phone must be signed using the same key. This is what allows them to talk to each other (in terms of account/notification) despite the technically separate applications. Usually when you install FB and Messenger (and other things) from the Play Store, it's not a problem because these apps are already signed by the same key. However, any trendy version of FB (like what is posted here) will be signed with the key of the person who modded it. Thus, when you install moderated FB applications, you need to remove all other FB applications (including Messenger) before installing modified FB applications. 2. So, if you want to install the Messenger app next to the modern FB app, you have two options: A) The first post in this thread contains links to Messenger (and other FB-related apps) that have been re-signed with the same key as Facebook LC. This allows them to coexist (and collaborate) on one phone without problems. B) You can grab AN APK for Facebook LC, APK for any version of Messenger you like, create your own signature key, sign them as with the key you created, and install them both on your phone. It will work just as easily. The upside is that you have more options over which the exact messenger version is set, but the downside is to go with manual signing. The guote: Originally published bauer18 I do not know how to retire as you suggested. I'm not a developer, so I don't know anything about it. 4. How to sign APKs? StepsUninstall all FB apps from your phone including FB-LC Download apk from apkmirror (messenger) and FB-LC from OP (if not already) Sign all these APKs with a test key (use windows tool for faster signing, because the mail sign will take half an hour to sign all these Signed APKs Detailed Windows Information . (I offer this option). Download it from Use, or Android amp; amp; hl=en and use the test key. Sign with the same key to all your Facebook, FB-LC, Messenger, Lite Lite apps or whatever else you use. You have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all, you have to sign FB-LC only once before installing (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all (when the new version comes) For Messenger and all LC (test key in this case). After signing for the first time you need to remove the PlayStore version of all FB apps and the original FB-LC before you install a cross-signature. Once you've installed the signed version, you can update them with your future signed version (test key) without deleting it - after signing Messenger you won't get an update through the game store. So you have to use apkmirror whenever you want to upgrade and sign it. You can grab the updated APK from here. PS : You can zipalign APKs after signing up for better ram management. Read here. (it's not necessary, but recommended). I've been working on a fixed Facebook APK for some time now. My corrected version is trying to get rid of as much bull, clutter, and social garbage as possible. I'm first and foremost things like garbage that pops up after most interactions with content (Related articles, people are also shared, more videos, etc.) and instagram upsells, suggested posts, ads (obviously) and generally everything designed to either capture your attention or disingenuously present yourself as organic content, being, in fact, paid content. While I've seen a number of facebook mods here, I haven't been able to find anything that focuses on this closely on eliminating clutter and optimizing the interaction between user and content. And while this stuff can probably be done with xposed extensions, the good thing about standalone APK is that non-root users can obviously benefit from it too. Is this something that people would be interested in, either for direct consumption, or for further hacking? I don't mind fixing things myself, although I'm basically an ARM dude so having to dig into the megs and megs DEX bytecode all myself was pretty tedious. Obviously you only have my word that I have not submitted malware or Bitcoin miner, although you can unpack the APK and diff it against the shares. So, is anyone interested? Would it be bad form to get a chance to post a link to the APK here? If you want to try the bleeding edges to build, message me thanks! Want to try this as well. Please outweigh the link. Thank you! April 8, 2017, 09:40pm #7 No 1 Sent from my ONE #8'A2005 via Tapatalk on April 8, 2017, 11:00pm Paid for the napkin and it's now broken and not updated, so trying to face thin at this point on April 9, 2017, 09:32 a.m. #9 Cool. I'm glad people are interested! I updated the top-level post with links to my current bleeding edge version. Good luck and have fun! Good luck with the project, be kind to use the official applications without any flaws April 9, 2017, 01:30 pm #11 @evilwombat can share your script please? I use the FB v80 fixed, since all the later versions of the buggy are for me. By Page 2, 10 apr, 2017, 4:02 AM -#21 Scroll lags behind for me (Mi5s Plus, MIUI 8) April 10, 2017, 07:20 PM No #22 Senior member of Brooklyn More Yes s7 users who are not rooted, can not install this because Facebook is pre-installed. April 10, 2017, 10:20 p.m. #23 Scroll will be laggy on the first few uses as the feed cache is replenished (because the app has been reinstalled). This is normal for the FB app. I think why would it happen differently. If you click likes on the article, you may notice a very tiny shift in the item underneath it as the app tries to show you the subsequent debris (which is disabled), but there are a few pixel upholstery that don't line up. I'm actually kind of like that kind of behavior though. Not sure what can be done with pre-installed FB devices, aside from rooting. Trying to replace the system app is difficult, so I think it's Android security at work. April 10, 2017, 22:52 #24 Senior Member Read More forgot to mention... Why so many garbage messages from friends and weird pages?It's crazy!Now I understand why people lead to Instagram. April 10, 2017, 10:53 p.m. #25 guote: Originally published as Kos25k also forgot to mention... Why so many garbage messages from friends and weird pages? It's crazy! Now I understand why people lead to Instagram. You can do the whole click triangle thing and click on to see fewer posts like this. He can do something. April 10, 2017, 11:31 p.m. #26 member More thank you dude. I clicked it maybe more than 100 times. for some reason I see most of the pages of posts that my friends pictures. I remember only the friendcaster app had this option, but I think abandomed. Anyway thank you all for your time and hopefully at least the opportunity to see only photos will be added. April 10, 2017 at 11:39 PM #27 In fact, one way not to see the interaction with page publications is to hide all the messages from that page. It may take some time to create a blacklist, but that's how I blocked most of the political idiocy out of my feed. As we patch up an existing application, adding complex logic is kind of tough. I guess I have to revisit the whole small thing - if I can find a way to inject my own code units (rather than make a patch of individual instructions). I know of sites in the app that can be hooked to filter out feed stories. But by referring to the Java feature with nothing but the hex editor a little beyond my ability right now April 11, 2017, 05:47 AM #29 (senior member of the more Fortunatelly x Messenger xposed moduke) works like with your applications! Also, I don't have this stupid day my integrated on the messenger! But I also have my output xposed module, maybe it does the job ... But instread I just saw stupid people you may know list. April 11, 2017 6:33 #30 I haven't really thought about Notification. I think I'll update the top level post when that happens. I decided to leave people you may know posts alone because they are sometimes useful and they don't advertise a paid product. If you want to get rid of them yourself, kill the 'pymk' resources. April 11, 2017, 2:46 p.m. #31 #31 Member More had to be removed. As both apps kept crashing, cleared data/cache The only thing I changed was the main repository, like the SD cards for the internal, which should not break the apps tried to reinstall facebook, and it is a common set, hopefully will be updated so can check it again Page 3 October 12, 2020, 10:36am #3811 More guote: Originally published cm2003 So I've not worked. Doesn't work for me too on October 13, 2020, 11:44 p.m. #3812 more, even if this app isn't updated anymore I still find it working well. Go to page 1 to download. Facebook-lc-16.2 (android 8 min) Messenger-241.2 (android 8 min) Be sure to remove any official facebook apps supported first, then tide the phone, wait 10 seconds and then run the phone. Install two modified apps and open facebook-16.2 first, Messenger 241.2 If your phone came with facebook pre-installed as a system app, then you are out of luck if you eradicate your phone.
