Whether your Android phone has an amazing camera or mediocre, there are many apps in Google Play that will help you take the best photos with it. We believe that the FX HOOM camera is the best of these options, not only because it packs powerful features, but it will help you learn how to make better photos as well. The FX camera is still our favorite camera app for Android, but it's been a while since we reviewed its features, tested the competition, and explained why it's still our choice for the best you can get. The SUOM FX camera has grown a lot over time, and while the competition is strong, we still feel it deserves a nod. Here's a fresh look. Camera zUM FX Platform: Android Price: \$2.99 Download PageFeaturesAuto-Focus and click on focus modesHardware customization options, including white balance, night mode shooting, ISO, focus accounting, exposure, contrast, saturation, and more (as long as your equipment supports it) gesture and multitouch support, including a pinch to zoom in, click to focus, and click to shootBurst shooting mode, which supports up to 20 shots per secondCustomizable mesh attachment (so you can use the rule of the third Horizon level indicator (never to be photographed again)Stable shot meter and shooting mode (with crosshairs, That flash red when the camera moves)Setting all the hardware buttons on your phone and assigning them to camera functions, such as zooming in on volume-controlled time spans for shots and long exposures ofSelf TimerVoice and sound-influenced triggers: Clap or speak to take a photorear and control shutter ControlOver 40 different photo filters and effects such as sloping shifts, vignettes, LOMO, retro, toy cameras, and PolaroidDozens photo presets for one-touch personalizationReal-time digital zoomGeotagging photos using your phone's GPSPreserves EXIF and other metadata with your photosAutosave images when you take theirLive previews of photo effects and filters before applying themSt any editing tools, including so you can build an instant collage of photos that you just take , Twitter, Flickr, and moreDownloadable leather packs, borders, frames, props, shutter animation, and other additionsTho it excels camera zUM FX is even more packed with features and photo tools now than it ever was. The app does a great job of giving you end-to-end photo shooting, editing and sharing experiences where you can use the app to take great photos, edit and touch them the way you like, add and other post-processing and then share it online or with friends on Twitter, Facebook, or any other app you want to click on the photo. Even if you don't use editing or customization features, it's still a fantastic camera app, packed packed composition tools, timers, audio-controlled shooting modes and settings to help you take the best photos with your Android device. These are the composition tools that really send the FX camera over the top though. Many camera apps have stickers and frames and filters, and that's fine if you like to use them, but it will actually help you build the best photography habits by teaching you the rule of thirds, looking for a golden ratio in your shots, or by helping you make sure you level with the horizon. A stable shooting mode will make sure that none of your photos are blurred or poorly focused, and click on focus ensures that you always highlight the object you want to be in the spotlight. Best of all, each of these features is so easy to use it's refreshing. A lot has changed in the world of android camera applications since we originally crowned Camera S'5 FX as our favorite, but what hasn't changed is the developer's commitment to adding new features, improving existing features and updating the interface and layout of the already great camera application without dropping support for old devices and various hardware. The FX OM camera is still the winner, and is usually a bargain (it's often on sale at least 40% off), and a huge improvement over almost any stock camera app. We keep trying other apps and we still think it's one of the most powerful. Where it falls the short camera of the zUM FX is great, but it's not perfect. It's long been missing HDR mode, as some other camera apps have stepped up to turn on, and it can't take panoramic shots even if your hardware supports panorama photography. It's a bit of a bummer, but given the widespread support for OS apps (Android 1.6) that may have something to do with it. However, given other camera apps definitely have these features, it's a bit of a thorn in the side to find them missing. It's important to remember that the FX CAMERA is at best a replacement camera app, even if it's trying to do a little bit of everything. What it does, it does well, but if you're looking for all the filters and tons of photo effects for

what's available here, you'll have to look at some of the apps below. Similarly, if you want more detailed editing and post-processing features, you should look elsewhere. Both of these things are OK though, since we're talking about the camera app here, not the personalization app or photo editor. The FV-5 camera contest (\$4, Free Lite version) has been around for a while, but only recently it's gotten good enough to really pay attention to and the boy did it get it good. It packs in tons of features, and developers have moved on to adding useful shooting features over and effects. You can control hardware settings such as white balance, exposure time, diaphragm, light meter and so on, and the viewfinder even has an RGB histogram right here, here, in real time. You'll find all the other useful features from other apps here too-tilt-shift shooting, auto-focus and click-on focus, long exposure support, work. Its only drawback is that the interface can be a bit overwhelming as a result of all the features. The vignette (\$3) is still around and kicking, and it's a great option if you're looking for an elegant shooting interface and more filters and post-processing effects than you can shake the stick on. It looks great, it's a joy to use, and can do a lot of other apps here can do, including tilt shift photos, cross-process, duotone, LOMO, toy camera, and more. The only downside to vignettes is that, being elegant and useful, it's also a little easier on features and shooting modes. Still, if other camera apps are overkill but you still want to step up from the stock, try it out. Cameras360 Ultimate (Free) grew out of the old Camera360 app, which was most notable for its HDR shooting mode. The latest version so far has it there, along with some other useful features such as photo effects, fast sharing, support for Sony's phone-mounted lenses, and a very easy-to-use interface. The interface is great at guiding you straight to the type of shooting mode you may want, but the problem with the app is that it's gotten progressively bloated and bogged down with features that aren't too useful and have little to do with taking good photos-just gimmicky ones. It also got to be the biggest of storage pigs, weighing in at 21mb. The focus camera (free) we mentioned earlier is better known as the camera that used to be complete with CyanogenMod. It's available now as a standalone download, and packs features such as HDR shooting, panorama shooting, photosphere, explosion shooting modes, self and auto timers, and more. This little buggy on some devices is definitely still a beta, and doesn't support anything running less than Jelly Bean 4.2, but if you need HDR or panorama, it's more than worth a look. Android (4.1): Focus, the camera app from CyanogenMod, is a pretty powerful photo and video with More Your Camera default app slightly different on each phone (Motorola will be different from HTC, which is different from Samsung and so on), but overall they don't offer a ton in the way of power. Some are better than others, and include a tap-to-shoot or tap-in focus, and some even give you these delicious equipment settings like white balance control and exposure times, but they're often buried in menus if they're there at all. They will do as a last resort, and while they are definitely a competition, their only advantage is their simplicity (which is nice, sometimes). It's obviously not Camera apps are out there, but they are by far the best. If you use one we didn't mention, please share it with us in the comments. Also, be sure to check out our list of the best photos for Android for more amazing apps. The camera in your Android device can range from exceptional to scary, depending on the model... Lifehacker's App Directory is a new and growing catalog of recommendations for the best apps and tools in a number of these categories. Photo: Wikimeida CommonsActive beta version of Android 10-Android 10 Beta 6 is now available for developers and enthusiasts. This build gives us an almost complete picture of what a public release for Android 10 will be like, which now includes some of the tricks Google is doing for its camera app. The biggest changes to Android 10 so far include new gesture controls and general user interface settings, but plenty of other core Android apps and features are also getting updates. Here are some of the key differences we noticed in the Google Camera app: Night Mode is now immediately available from the main menu, taking away a place previously covered by Panorama mode. The app will still display that annoying tablet notification that you turn on the night mode if the image is too dark, although it will now be much easier to use it in the first place. Screenshot: David MurphyBelt's balance and color temperature control have been completely removed from the app. Time to switch to more powerful apps if you need these controls. The front flash controls were simplified to the switch, and the feature was renamed Illumination, as it does not actually use the flash, but rather brightens the phone's screen to act as a ersatz flash. Screenshot: David Murphy Is a safe bet that these changes will be carried over to a full release, which is expected to begin sometime in the coming weeks. Owners of any Pixel phone can get an early look at the new camera user interface and all other Android 10 features by choosing Android's Beta program.
