06/07/17 / By chantelle Please answer a few simple questions so that we can point you in the right direction. This information is only for guidance. The temperature in the room is shown by the number that illuminates. This thermometer will not be washed over the radiator or under direct sunlight. Grobag Baby Sleep Bags are designed to be used instead of blankets and top sheets, and you should regularly check your child to make sure he or she is not too hot or cold. What to wear Grobag Baby Sleep Bag is a wearable blanket that will keep your baby at a comfortable temperature all night long. This table shows our guide to the correct grobag tog and clothes to be used in different room temperatures. Grobag What to Wear Is a Grosnug Guide What to Wear Guide However, when the temperature spike can be difficult to achieve this, so here are some tips for cooling your room: During the day, keep the windows open and the curtains closed using an electric fan to keep the air circulating - don't indicate it directly to your child and keep it well out of their reach. Bonus - The sound of a fan can act as a white noise and help calm them down! Putting a bowl of ice in front of a fan creates low-tech air conditioning If your child's bedroom is particularly warm, Consider moving them to sleep in the cooler parts of the house Use parental discretion to judge whether your child needs any bedding at all in very high temperatures as the night cools, can you add bedding layers when your child wakes up for food or changes Use Groegg to monitor the temperature change of your child's room and make informed decisions about their clothing and bedding? The new Gro-Egg 2, from Gro, has the same fantastic features as the original Gro-Egg, including a color-changing digital thermometer - which lets you know room temperature at first sight without having to go and wake up a sleeping baby! However, Gro-Egg 2 has a new sleek, silicone design that is 33% larger and brighter, making it softer to the touch and even easier to see at first sight, in addition to the innovative color change system and digital display temperature, Gro-Egg 2 includes four adjustable levels of brightness allowing us to see it as night light or finding a level of light that suits your child. It can also be used as night light and has a USB cord unlike the original, which is the main force. Room temperature is vital in creating a safe sleeping environment for your child and should be maintained at 16-20C to help Risk of cot death - Children who get too hot are at increased risk of SIDS. Getting a room thermometer will help you create a safe sleep environment for your child. Francine Bates, Executive Director of the Lullaby Trust Please note: Different room thermometers vary in temperature, up to 1 degree. So if you use more than one room room in one room, they can give different testimony. It doesn't make the thermometer malfunction, it's just the nature of room thermometers. Getting a comfortable night's sleep and avoiding the dangers of your child getting too cold or overheating is crucial. Here at BabyDoc we've collected some of the best tips for rating TOG and dressing your baby in different temperatures! TOG - What is it? TOG or Thermal Overall Grade is a scaling system used by tor that measures the value of insulation. Basically, how much textiles or fabric keeps you warm! Some parents may wish to use a children's sleeping bag to tuck their toddlers to sleep in. But which ever brand you use, they should all have a tog rating displayed. You can use this TOG rating as a guide for what season to use it in! Choosing the right TOG? It is misleading that choosing the right TOG for a baby sleeping bag is based solely on the seasons and current weather outside. This is obviously due to this, as summer time is naturally warmer than winter. However, first of all, parents should base their choice on children's or room temperature! As it is where the toddler will sleep this is where your TOG rating should be applied! It may be 30 degrees outside, but the inside of the bedroom can be cold. Or it could be -15 degrees outside, but the nursery is nice and toasty!! The general guide is that the ideal room temperature should be somewhere between 16-20 degrees. Take a look at this handy chart for room temperature to tog the rating guide! Baby Doc Top Picks! Here are a few handy products to make life simple! Gro develops Gro Bags of various ratings and DESIGNS TOG in accordance with each nursery! Check the range at Gro Company HERE or check online too! Gro also makes a very popular and practical Gro Egg Room. This Gro egg is very simplistic and easy to use! This not only makes it easy for parents to see the temperature in different colors it also displays temperature digitally. Then you can interpret which to-use TOG sleeping bag! And and Can join our BabyDoc mailing list here! BabyDoc team TOG stands for thermal overall class. It is a scaling system used to measure insulation. Basically, how warm textiles or fabric will keep you! All Gro bags or children's sleeping bags should have a tog rating displayed as a guide of choice! How to choose toG? It is sometimes wrong that the choice of the right TOG for a baby sleeping bag is based on seasons and current weather or temperature. This is obviously due to this, as summer time is naturally warmer than winter. But first of all, parents should base their choice on room temperature! Children's or children's room where the baby will sleep ... And this is where your TOG rating should be applied! It may be 30 degrees outside, but a cold bedroom. Or it could be -15 degrees, but the nursery is nice and toasty!! The ideal room temperature is somewhere between 16-20 degrees. Take a look at this handy chart at room temperature to tog the rating! There are also some super smart Travel Gro Bags that allow your feet to pop out and for the baby to be strapped comfortably in the car seats etc! There are some great options for just 24.99 pounds available from JoJo Maman Bebe right here or Mothercare ICHES! Please follow and like us: If you are anything like me, you can not sleep if you are too hot or too cold, my children are just the same, they always sleep better when they are warm and cozy, and the room is not too hot. When toddlers were babies, I often worried about nursery temperature and if they were in the right clothes or properly tog grobag and go to check them out. On more than one occasion I accidentally woke them up in the process of feeling the back of their neck, or if their face was cold. I had one of those things paper thermometer, but it never gave an accurate reading and was not reliable plus I could never see it in the dark. I was recently given the opportunity to review the gro-egg from Gro and I can safely say that we love it and it will be necessary to have a nursery item for ours when the little 3 makes an appearance in a few weeks. Gro-egg digital locker room color thermometer and just one look is all you need, See the temperature of your child's room and adjust the heating, window or bedding accordingly, no more feeling them then them and risking to wake them up! The right room temperature is important for your child, as health care providers say that room temperature is 16-20 degrees (61-67 Fahrenheit is safe for your sleeping child to reduce the risk of SIDS (Sudden Infant Death Syndrome). The gro-egg glows yellow when the room temperature is within these guidelines and changes color when the temperature drops above or below that, so you can see at first sight the temperature of your child's room. The gro-egg is a lovely size of just 70mm by 110mm and sits discreetly anywhere thanks to a long power cable provided it has a switch on and off underneath and can therefore be easily turned off if necessary and registers the temperature as soon as it is turned back, which is easy to see on the clear display. The instructions come with a handy guide on what clothes and bedding/grobag tog your child needs depending on the temperature, so it's handy too. Initially our Gro-Egg will be tested by Little 2, who has a bedroom, definitely the coolest time at the back of the house and then switched to Little 3 for use in the nursery when the time comes, but I think we'll be having to invest in another as little 2 loves her egg night light so much! Little 2 is afraid of the dark and has been since it was about 19 months (you can read about it here) and after going through a few different night lights last year I have to say that I really like the gro-egg as night light too. It doesn't light up in a room like a Christmas tree like some we've tried, and it has an encouraging glow that it can see easily rather than a trifle plugged into an outlet where it can't see it. I can see that it will be a handy light in the nursery to peek in at the baby too. Gro also sells an egg-shell for your Gro-egg to turn it into a friendly night light, a soft flexible plastic cover shaped like an animal. We invested in Penguin Percy one after trying our gro-egg for a few days and realizing how much Little 2 liked it and now it certainly won't be allowed to go to the baby's room! For more information about Gro-Egg and other Gro Company products, please visit www.gro.co.uk and for more information on SIDS and safe baby sleeping overhead to www.lullabytrust.org.uk. N.B I was sent Gro-Egg for free in exchange for this review. We bought our eggshell ourselves. Yourself. gro egg 2 tog guide
