All the products in this bookstore are just digital downloads. Not sure how to download? Below are some general download instructions: Important: Most mobile devices, such as phones and iPads, do not allow downloading on the link. The exceptions are iOS devices running iOS version 11 and above (so you can upgrade before downloading). Post files: Some of my products are sent using a compressed zip code file. Here's how to unpack the qIP file: On your desktop or laptop: Save the qIP file on your computer, tap the right button and select Extract All (Windows) or double-click (Mac). This will create a new file on your computer in which you can open. If you need to get files on your mobile device, add a file to iCloud or Dropbox, or just send it to yourself by email. Alternatively, you can check your email order on your mobile device and re-download it from my store. If you have a problem with downloading, make sure you have a strong internet connection and/or try using another browser. On your mobile device (phone or tablet): If you have an iPhone or iPad, upgrade to iOS 11 or higher if possible. If you're not an option, you may need to get a free app to unpack it before trying to download it. This will allow you to unpack the folder to access it. Another solution available on some mobile devices is to hold the file icon on a zipper for a long time and then press the Extract button. On iOS 11 and above, you can click Preview Content to view the items inside the file and then save them separately to the device. All files are sent in PDF format. Virtually all computers these days pre-installed Adobe Reader software on them. If you don't have any PDF reader on your desktop, laptop or mobile device, you'll need one to view the items. Adobe Reader is the most common and it's free. You can download it here. Can't find your file? Most downloaded files automatically go to the Downloads folder to Mac and PC. On the Mac, click on the Finder icon in the dock and click on the Downloads to see what you've downloaded recently. On the PC, look under my computer or look for the name of the file on your computer where it may be hiding. Note: Some web browsers will download the PDF directly to the browser. You can make a copy of this PDF and keep it somewhere that makes sense on your computer by clicking the file to save. Print Note: If you try to print my PDF files from your iPad, you may encounter an iPad error that prints pages without images. If that happens, you need from another location (laptop or desktop) or by emailing a PDF to your local office delivery store (Staples, OfficeMax, Office Depot) for printing. This is a well-known iPad bug without a good workaround. I'm talking about this now to save you from losing ink and paper. If you need help, please contact hello@jennifermaker.com Hi, everyone, my name is from Jennifer Producer White and the shit line and I'm here today because I did something super interesting and I'm so happy to show it to you. Finally, I would be a cricket coach playbook. Now, before I show you what it is, I'm going to tell you a little bit about why there are none at all. So when I first came up and fast, he was so excited to get it out of the box and allowing them to create a design space and I like whoa, we just love this stuff. It's really cool, but oh my god there are so many buttons and so many options. I have no idea that I'm doing any related dolls so I had to dive in and really learn what to do and I'm researching and I watch so many videos and I'd have so many posts and I had it really along being right a whole, but I learn these things and I started the notes because that's the thing guys I have. like what I called pick memory just can't save this stuff and less. I do it as a constant all the time and the fact is any of us are using the cricket design space of 20 47. Maybe some of us probably don't most of us right so we learn how to do what we forget. That's right so I recorded all my notes so first they're on my computer right here on my phone and then, after they were just these little beauties. So they were fasting. It notes that I am not very efficient and kind of dirty, but I need, like very simple directions. I'm really just very specific about what to do as well on my blog because I share a lot of projects. I've been getting a lot of email from my readers who don't you know people who need cricket, and they've been asking me how to do things like download a file, how to grip things, how to change lines to score lines. How to group things, how to do things, how to change things than that, and I explained things to roll over, and I have this rule if I had to look for something or explain something more than three times it's time to write it right. So I recorded it and I recorded it here it's basically my whole collection of old ones. My notes are on how to do all the things in the cricket design space like all this and it's amazing because it's all recorded and like me, I just go and I just watched it. I got these taps on the side and I just see what I need and it has an index right here so I can just go straight to the next one to find what I need and everything. I quit. I can do my amazing thing faster than usual and get out of things and it's awesome. I just love it, so I want to tell you a little more, of course, about how this work is so that I did it. Let me give you an example well. It's an index. just showed you and these are themes that cover that are really quite a lot, but let me show you with the actual page. so here's one of the android pages Because of course I cover all the platforms to reveal the desktop version of the cookie design space as like as a version that will be an iphone and I had and android so anything that can designs based. We need to know how to use this right so essentially we couldn't show it to you a little better. You see it for that. So basically I'm sure you're exactly where to click and what to do to get the job done, get the right move so it's all designed to just make things very quick and very easy, so I have this for all the basic things that we do and quickly. It's a space so we start getting together right for those of us who are really doing it. How to open and start a new project because sometimes it's the very first question that anyone we have how to connect to cricket using Bluetooth environment guys. I stop as I swear. Now we're trying to figure out why we couldn't connect, and it turns out it's because they had too many devices connected yes so few things like that once knowing it to save you all this time and the headache is a huge deal. How to attach so you can keep things together when you send it to the map that I live like to slice like a contour. If you guys don't know what contour does for a long time, I'm not either it's a really really amazing tool I'll be. Let you remove bits from your designs so that you can pretty much customize almost anything that is really cool a bit. How to smooth so that you can print and cut as actually print and then cut. I can't even tell you how many times I've had to go back and research the print and then cut back. I just don't use it enough and it's kinda hard to make it work properly so having it all typed to stand out is a savior. Oh yes. How to rein in the tax on the big one. How to align and distribute objects. Because it's a really good tool. How to change your space. How to score with a stylist or us, will have to switch back and forth between them. How to move items that you guys haven't done, even know how for six months that you can change the position of the items on the mat that it is. It's such a time saver. Now arm as you snap a clean ugh. How to keep your job. The interview saves projects and it has to be ahead, like keeping something on your door stop and then bring it on your phone so you can then you know when you're in cricket and that's really very helpful. Hmm ice fighting this for a while. If it wasn't in the same place when you move into your desktop like the iphone and Android, all I can't increase is we have space nearby as I don't know what to do and it's so useful a lymph baby cartridges. How to upload images and how to upload images and how to background images because of when you how to do that you can your life. You can do almost anything, and of course how to keep your cricket plugin and/or app up to date, as well as include things like a gm mirror image for iron on arm. I have no vinyl, so you can make those, and then as a group group group stuff as well, so that's what he did because I wanted to keep things on my cricket. I know I'm working there, so I did it, that they all have these tails on the sides, so those of you you can keep your notes under the cricket because it's called that it would be great to put it out and just try to keep it right here. So you can see all the different topics right here on the tabs and it's like very helpful, I think another thing I've done that for those of you who are learning and don't just need to remember how to do things, but actually learning so for every project I actually put here at the bottom, so we have to bring this here comes out at the bottom of each of them I have a link, so you can open the project that I'm showing on the chart and link right now here below, and you go straight to that. You see exactly the same project that I'm showing on the chart and then you can follow along if you're confused about it or anything so it's also ways to learn cricket and also you know remember how to do everything and arm yes, so I'm really excited to work on this project for a while and I think it will help so many people and I think it can totally help you. I, if you're new, for cricket it will be a life saver. If you use your cook, it's for a while like that. I have an Oj. Obviously as it is a lot, I can't remember all the stuff, and like that, everything is recorded in one place without hunting, huge it's just so huge, so in the book and I put it you can do it too if you want it or you can just put it on your computer to look up or you can put it on your phone that's also very helpful. Hmm or I will continue as your android as well, wherever you have to use it. You can use it and you can keep it under the cricket. If you want to, or you can just visit on your devices, all that works for you and the cool thing about it is that of course there will be an update there, always up to try the cuts a lot and there will also be suggestions from you and I'm really great at feedback, so I'll be included seeing changes and updates as we go and you have access to all the updates and changes that we do so you can just go back and download it again and you'll get it all over again. Aam so I'm just I'm really excited and I really think it will help so many willy people get the most out of their cricket and I'm really excited to see what people are doing so, if you want to learn more about the cricket coach playbook just go to coach dot com or just go to Jennifer Dot com and click on the book you'll find it there as well. Thank you so much, and I hope this helps you
