But it doesn't have to be all doom and gloom. These Android and iOS games can help you move away from security threats all around and have a little fun. From tower defense games to exciting VR environments or even text stories, these mobile apps will help you stretch your imagination and maybe even your skills. Source: apps.apple.com hackers pit you against other real world players in tower defense style game strategy. Hacking is visualized as 3D networks that players build to protect their mainframes. You create your own network while receiving and upgrading tools to attack others either by brute force attacks or by stealth with three different types of mission. The game is free to play with in-app purchases available for the game currency if you want to speed up your upgrade process. Android iOS Source: Google Play Store In Hack Ex, players face each other trying to hack bank accounts and download viruses to get funds to further their hacking efforts. Hacking other hacking devices also allows you to spy on your opponents and then cover your tracks by manipulating magazines. Players find targets by scanning and identifying IPs with a firewall that is next to their bypasser level, the greater the discrepancy between these levels, the less likely the hacking is to be successful. Players use the game currency (Bitcoin) to buy new hacking utilities or superb smartphones. The game is free to play with in-app purchases for extra Bitcoins or Overlocks to boost your devices. Android iOS Source: apps.apple.com Hacker in Search of Offline Text Game That Takes You Through story through a simulated terminal that old school computer users (or Matrix fans) would love. The game follows a much more realistic realistic hacking than most with more social engineering instead of clean hardware and software get the job done. Knowing terminal commands is going to make early levels pretty easy, but with 55 levels of hacking puzzles there's still plenty to enjoy. The game is free to play with the developer just asking you to pay what you want at the end if you liked the game. iOS Source: apps.apple.com apologies to real hackers, but Cyber Hacker is the closest thing to the actual hacker simulation you'll find on Android or iOS. The game is essentially solving puzzles with password hacking, viruses, DDoS attacks and a healthy dose of social engineering as tools of your trade. The game starts with you as a young freelance hacker doing the job for Bitcoin. Even in the earliest stages of the threat of Interpol to track you down is constant. While learning how to use all the tools at your disposal is crucial (definitely take a tutorial), skills such as remembering the structure of different file systems and properly phishing employees before trying to hack is just as important. While this game is certainly still a reductive version of hacking, it offers a fuller picture than most and should scratch the itch for fans of the genre. iOS Source: Google Play Store Hack RUN series based on text is an interactive story game that has spawned five titles on iOS, with the original two available on Android. The games all follow the same general structure: you use the terminal interface to hack into employees' accounts in the shady RUN organization to uncover information and improve your skills. Like many of these hacker games the game really makes up puzzle solving and reading understanding as you seek to identify valuable information in email, notes and websites that you find in the system. While the gameplay isn't going to be a gateway to hacking greatness, the main story is interesting, and the developer continues to shoot down sequels on a regular basis to keep fans engaged. iOS Android Source: Google Play Store Where some of the games on this list are leaning towards real image hacking, Darknet for Gear VR and (soon) Daydream is a very cheesy movie version of hacking and cyberspace. It feels appropriate for VR however, much more than putting on a VR headset and staring at the terminal screen. This game is really just a puzzle in the clothes of hackers. You view the nets as a series of nodes with a gold kernel node up for capture, infecting nearby blue antivirus nodes. Capturing the main site receives money to upgrade tools and buy additional viruses. Gear VR Daydream In addition to security scares, hacking has infiltrated many parts of pop culture, including our movies.
