## Transom definition architecture

A cross separates the entrance of a window or light above the horizontal organ across the top or center of the transum light window/transom window/transum: in the United States, a window or part above the door, whether rectangular or arched. Also, a window that stops along the upper edge light: in the window, the openings between mullions. In general, fanlite parts: arched window or part above the door: ornamental panel, carving or section of wood directly above the entrance - similar to the transom window, but not found unmade of transrectangular glass and side lights in the Greek Renaissance, neoclassical methods before electric lighting, the interior building was often very dark, even in the middle of the day. Putting transom windows over the interior doors allows light to penetrate further into the building. They are regaining popularity today as more homeowners prefer natural, rather than artificial, light in their homes. Homeowners also appreciate the security value of transom windows, which allow in light even while the door below is still securely locked. Some transum frames are fixed and cannot be opened. These windows are often decorative in some way. They may be divided into multiple parts by vertical muntins, or they may be filled with stained glass. The decorative value of the Transum windows was greatly appreciated in the Victorian period. Other Transum windows can be opened. Sometimes the hinges are placed at the bottom of the window, so that the transum window opens at the top. In this arrangement, a lightweight chain is often attached so that the window cannot fall too far. These windows can also be stopped at the top, so that they open at the bottom. - Wisegeek (March 2019 online) Examples from Buffalo: Other examples: (Definition transom of cambridge advanced learner dictionary and conken © Cambridge University Press) Light Transum/Transum Window/Transum: In the United States, a window or part above the door, whether rectangular or arched.
